

Thirty-five Years
of
FARM COST ACCOUNTS

Department of Agricultural Economics
Cornell University Agricultural Experiment Station
New York State College of Agriculture
Cornell University, Ithaca, New York

March 1950

FOREWORD

Farmers have kept Cost Accounts in cooperation with the Department of Agricultural Economics, New York State College of Agriculture, Cornell University, for forty-three years. In 1907, the late Dr. G. F. Warren started Cost Accounts on his farm. After spending the next few years in experimenting with and developing an accounting system suited to farming, the work was expanded and has continued to date. Each year these records have provided information on a wide variety of enterprises for use in teaching, extension, and other research. This publication summarizes results from the accounts for the thirty-five years since 1914. Some of the effects of changing prices, increasing mechanization and other technological developments in farming and farm costs and returns are evident from the averages. Charts are presented to indicate and compare the trends, yields, and rates of production on Cost Account farms with averages for New York State.

Cost Account farmers, in general, are more highly educated, operate larger farm businesses, and use more modern farm equipment and farming practices than most of the farmers of the State. Thus the data shown in this publication are not necessarily representative of the agriculture in New York, but present a farm business picture for a group of the State's better farmers.

ACKNOWLEDGEMENTS

The data in this report were taken from the accounts of approximately 380 farmers who have at one time or another cooperated with the College in keeping Cost Accounts. The report is a continuation, somewhat expanded, of an earlier publication, "Twenty-five Years of Farm Cost Accounts," by Paul Williamson. Marjorie Evans, Onolee Conklin, Helen Smith, Evelyn Skirpan, Oleta Shipe, Ruth Weaver, and Virginia Williams performed the clerical work of compiling the data. The work was supervised by A. J. Ashe and C. DelMar Kearl.

Table of Contents

Labor income	1
Farm real estate	3
Labor	4
Farm power:	
Tractors	5
Horses	6
Livestock:	
Dairy cows	8
Pullets	13
Hens	14
Cash crops:	
Potatoes	17
Cabbage	20
Canning-factory tomatoes	22
Canning-factory peas	24
Dry beans	26
Apples	28
Peaches	31
Pears	33
Cherries	35
Hay and grain:	
Alfalfa	37
Other hay	40
Wheat	42
Corn for grain	45
Oats	48
Barley	51
Mixed spring grains	54
Corn silage	55
Digestible nutrients	57
Returns per hour of labor for 16 farm enterprises	58

PRICES AND LABOR INCOMES

* From 1920 to 1933, total costs and returns were divided by total production of apples to get unit costs and returns. After 1933 cull apples were considered by-products; income from ciders and driers was deducted from total costs to determine the cost of producing the "packable fruit."
