# CENTRAL PLAINS REGION

### 1968 DAIRY FARM BUSINESS SUMMARY

Stuart F. Smith Larry N. Davis

Department of Agricultural Economics New York State College of Agriculture A Statutory College of the State University Cornell University, Ithaca, New York

#### CENTRAL PLAINS REGION FARM BUSINESS SUMMARY - 1968

This report summarizes the records of 37 Central Plains dairy farmers who in 1968 participated in business management projects sponsored by the Cooperative Extension Service in Ontario, Seneca, Wayne and Yates Counties and the Department of Agricultural Economics at Cornell University. The data presented here do not represent the average of all dairymen in these counties but the average of a group of dairymen interested enough in their farm businesses to keep good records and take the time to study and analyze them. These are not to be taken as indicative of the relative profitability of dairy farming in the various counties.

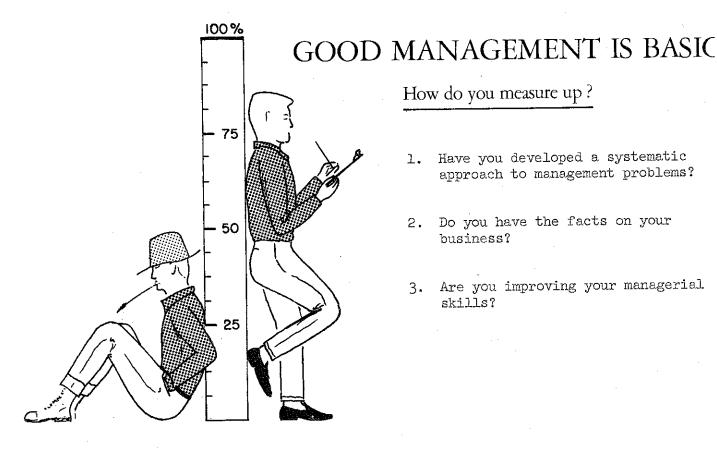

One of the purposes of the business management projects is to teach and encourage farmers to keep better records. A more important purpose is to teach farmers to use the records as a basis for sound management decisions. Each farmer has the opportunity to participate for a period of time. He should learn good record keeping and learn how to analyze his business. This should enable him to use more effectively the economic and management information available from many sources, including the general farm management program offered by the Extension Service.

Farmers in many counties of New York State participate in business management projects similar to those in the Central Plains Region. Some of the data included in this booklet is taken from the 1967 records of 548 New York dairy farmers. This gives farmers the opportunity to compare their business with a larger group of their competitors. The larger number of farmers also makes possible the sorting of farms into groups, thereby allowing comparisons that could not be made from the relatively small number of records in any one county.

Changes in farming are taking place at a rapid pace. Research data indicate that the average number of cows per farm in New York increased from 29 in 1960 to 38 in 1967. This change is due both to the dropping out of smaller farms and to the expansion of many of those remaining. Projections based on the same research indicate that the average number of cows per farm in 1975 will be 55. The number of dairy farms in 1960 was 40,200. By 1967 it had dropped to 26,350; in 1975 it will likely be 16,500. In the future some dairymen will expand, others stay at about the same size and still others will quit farming. It is a challenge to each dairyman to decide upon the best course of action for himself and his family. A study of your business records and budgeting of some possible changes for the future will help you to make this decision.

The information in this report should be useful to farmers in the county who are not enrolled in the business management projects. It should also be helpful to persons who work with farmers, such agricultural teachers and credit representatives.

This summary was prepared by Stuart F. Smith, Department of Agricultural Economics, Cornell University. Larry N. Davis, Cooperative Extension Specialist, farm management, supervised the projects within the four county region and assisted with the summarization of the records.

### How do you measure up?

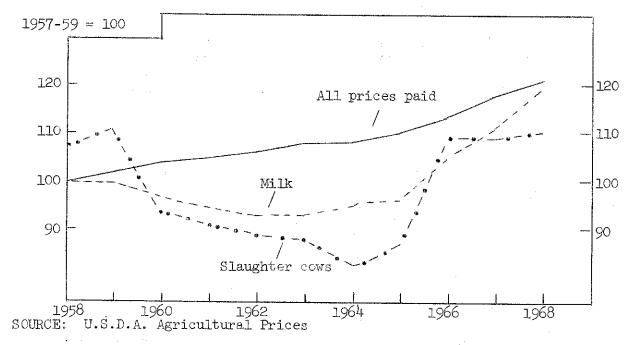

- Have you developed a systematic approach to management problems?
- Do you have the facts on your business?
- Are you improving your managerial skills?

### Steps in making a management decision:

- Locate the trouble spot (problem)
- 2. What is your objective? (goal)
- 3. Size up what you have to work with (resources)
- Look for various ways to solve the problem (alternatives)
- 5. Consider probable results of each way (consequences)
- Compare the expected results (evaluate)
- 7. Select way best suited to your situation (decision)
- Put the decision into operation (action)

This workbook can help you!

Prices are one of the important factors affecting farm incomes. The relationship of prices received and prices paid determines the general level of farm incomes. The blended New York farm price for 3.5% milk in 1968 averaged \$5.43 per hundredweight. This was 36 cents higher than the average for 1967 and \$1.16 more than 1965. Cull dairy cow prices also were relatively good in 1968. The overall index of prices paid by New York dairy farmers continued to rise in 1968.

In recent years, prices of some farm inputs have risen while others have declined. From 1965 to 1968, farm wages rose 30 percent, dairy cows rose 34 percent, while feed declined 3 percent, and fertilizer prices declined slightly. These differences give rise to management questions concerning substitutions.

AVERAGE YEARLY PRICES RECEIVED AND PAID BY N. Y. FARMERS, 1960-68

Year	Milk (cwt.)	Slaughter cows (cwt.)	Dairy cows (head)	Dairy ration (ton)	Wages per month with house	Prices paid by New York dairymen

<sup>\*</sup> Preliminary

### PART I SUMMARY OF THE FARM BUSINESS

The first part of this booklet is designed to enable you to summarize your business in a systematic, orderly manner. It provides an opportunity to study your physical resources, capital investment, receipts, and expenses. This is the first step to be taken in the study and analysis of your farm business.

#### PHYSICAL RESOURCES

Knowledge of what resources are employed and how they are combined is fundamental to sound business planning. This includes both the physical and financial resources of the business. Below are listed the physical resources of this group of Central Plains Region dairy farms.

FARM ORGANIZATION

		age of	<del></del>	37 0	Central P	lains farm	s, 1968

Total crop acres	138			230		85	685

<sup>\*</sup> Number of farmers that reported each crop.

<sup>\*\*</sup> Crop data from 495 of the 548 New York farms.

<sup>\*\*\*</sup> On some farms, hay crop silage was reported as part of the hay crop.

#### CAPITAL INVESTMENT

Management of the capital resource of a farm business is becoming increasingly important. To measure the complete financial progress of a dairy farm, year to year changes in the capital structure must be considered.

In this report borrowed as well as owned capital is included and the end-of-year farm inventory is used as the measure of capital investment.

FARM INVENTORY VALUES, end of year

Item	Average of 548 New York farms, 1967	My farm	37 Centr farms Average per farm	al Plains , 1968 Percent of total
Machinery and equipment	\$20,250	\$	\$28,409	21
Cattle	22,160	Title	27,511	20
Other livestock		and the specimen was a second	175	<b></b>
Feed and supplies	6,840		11,011	8
Land and buildings	42,560		<u>70,836</u>	<u>51</u>
Total Investment	\$91,810	\$	\$137,942	100

In many farm businesses, poor capital efficiency is a major cause of low profits. The following measures of capital efficiency will help you evaluate your overall capital management.

#### INVESTMENT ANALYSIS

Item	Average of 548 New York farms, 1967 My farm		Average of 37 Central Plains farms, 1968
Machinery and equipment per cow	\$ 397	\$	\$ 498
Land and buildings per cow	\$ 834	\$	\$ 1,243
Total Investment per cow	\$ 1,800	¢	\$ 2,420
Total Investment per man	\$48,321	\$	\$59,974

Real Estate Investment/crop acre	\$ 308	\$	\$ 308
Capital turnover*	2.5 years	yea	rs 2.6 years

<sup>\*</sup> Calculated by dividing the total year end investment by the total cash receipts for the year.

#### WHERE THE MONEY CAME FROM

A successful farm business requires a level of gross earnings great enough to pay all costs, both operating and overhead, and leave a margin for the operator's labor. Here we examine the sources of receipts for this group of dairy farms.

#### FARM RECEIPTS

Average of		37 Central Plains farms, 1968		
548 New York farms, 1967	My farm	Average per farm	Percent of total	
\$32,347	\$	\$38,821	7 <sup>4</sup>	
3,283		4,080	8	
133		6,922	13	
1,032		2,537	5	
\$36,795	\$	\$52,360	100	
7,514		7,974		
\$44,309	\$	\$60,334		
	\$32,347 \$32,347 3,283 133 1,032 \$36,795 7,514	548 New York farms, 1967 My farm  \$32,347 \$	548 New York farms, 1967       Average per farm         \$32,347       \$ \$38,821         3,283       4,080         133       6,922         1,032       2,537         \$36,795       \$ \$52,360         7,514       7,974	

<sup>\*</sup> Includes work off farm, conservation payments, refunds, etc.

Increases in inventory resulting from more cows, more machinery and equipment, additions to buildings or a better feed situation are a normal occurrence in most "going" farm businesses and are considered as farm receipts. These items could have been sold and turned into cash receipts, but instead the operator decided to invest this additional capital in his business. The cost of producing or acquiring these items normally is included in the farm expenses.

The increase in inventory on these farms was made up of the following: Equipment - \$1,979, Livestock - \$2,653, Feed and Supplies - \$157, Land and Buildings - \$3,245. On some farms, the increase in inventory may have been more than could actually be justified.

#### SELECTED INCOME FACTORS

	Average of 548 New York farms, 1967	My farm	37 Central Plai farms, 1968
Average price per cwt. of milk sold	\$ 5.25	\$	\$ 5.46
Milk sales per cow	\$ 63 <sup>1</sup> 4	\$	\$ 681
Total cash receipts per man	\$19,366	\$	\$22,765

#### WHERE THE MONEY WENT

Some farmers may be able to increase profits by reducing costs. This requires a complete knowledge of what the business expenses are. With the large amount of cash flowing through a farm business today it is important that the farm operator study his expenses closely. Here is an opportunity for you to see how you're doing.

#### FARM EXPENSES

	Average of			al Plains , 1968
Item	548 New York farms, 1967	My farm	Average per farm	Percent
Hired labor	\$ 2,147	¢ Ø	\$ 5,155	17

#### FINANCIAL SUMMARY OF THE YEAR'S BUSINESS

There are several ways of measuring the returns from a farm business. These measures have been developed for specific purposes. The measure selected at any one time will depend on the purpose for which it is to be used.

Three measures are used here. The first is "Farm Cash Operating Income". The second, "Labor Income", is a measure of the returns to the operator for his labor and management. The last one is "Return on Investment".

#### FARM CASH OPERATING INCOME

Item	Average of 548 New York farms, 1967	My farm	Average of 37 Central Plains farms, 1968
Total Cash Receipts	\$36,795	\$	\$52,360
Total Cash Operating Expenses	- 21,293		- 29,929
FARM CASH OPERATING INCOME	\$15,502	\$	\$22,431
Less: Family Living Expense*	- 6,011		6,130
Amount available for debt pay- ments and purchase of capital items	\$ 9,491	\$	\$16,301

<sup>\*</sup> Estimated cash living expenses @ \$5,400 per operator. The 548 New York farms averaged 1.1 operators per farm and the 37 Central Plains farms averaged 1.1 operators per farm.

"Farm Cash Operating Income" is the amount of money available from the farm business for family living, debt payments, and purchases of new capital items such as equipment, real estate, and livestock.

The "cash flow" of a farm business is important to the operator and his family in planning for capital purchases, debt payments and living expenses. However, the above measures are not good indicators of the profitability of your farm business. This is because you may increase the amount of cash avail able during the year by selling off or using up some of your farm property or, more likely, you decrease the amount of cash available by investing more dollar in your business during the year. Labor Income is a much better measure of whe the business did for you during the year.

#### LABOR INCOME

Item	Average of 548 New York farms, 1967	My farm	Average of 37 Central Plains farms, 1968
Average capital investment	\$88,050	ф	\$133,955
TOTAL FARM RECEIPTS	\$44,309	\$	\$60,33 <sup>1</sup> 4
TOTAL FARM EXPENSES	- 31,542		- 41,626
FARM INCOME	\$12,764	\$	\$18,708
Interest on capital at 5%	- 4,402	_	<u>- 6,698</u>
LABOR INCOME per farm	\$ 8,362	\$	\$12,010
Number of operators	610	) · · · · · · · · · · · · · · · · · · ·	42
LABOR INCOME per operator	\$ 7,511	\$	\$10,580

"Labor Income" is a measure used to determine the return the farm operator receives for his labor and management. It is the amount left after paying all farm expenses, and deducting charges for unpaid family labor and for interest on all of the capital invested in the farm business. Labor Income is the measure most commonly used when studying or comparing farm businesses.

Interest payments and payments on debts are not included in the farm expenses. To make all farms comparable, a five percent interest charge on the average capital investment (average of beginning and end inventories) is deducted in calculating Labor Income.

In addition to Labor Income, the family has "farm privileges" such as the use of a house and farm produced food. These items may amount to \$1,000 or more per year.

#### RETURN ON INVESTMENT

Item	Average of 548 New York farms, 1967	My farm	Average of 37 Central Plains farms, 1968
Farm Income	\$12,764	\$	\$18,708
Value of Operator's Labor*	- 6,011		- 6,130
Return on Investment	\$ 6,753	\$	\$12,578
Rate of Return on Capital	7.7%	<u> </u>	9.4%

<sup>\* \$5,400</sup> per year. There were 42 operators on the 37 Central Plains dairy farms.

"Return on Investment" is calculated by deducting from the "farm income" a charge for the operator's labor. This return is then divided by the average capital investment for the year to arrive at the rate of return on investment.

### PART II ANALYSIS OF THE FARM BUSINESS

A farmer's success depends on the resources available to him and his ability to manage the use of these resources. He must understand and apply basic principles of farm management.

Farm management studies indicate that certain business factors are related to labor income. Four important factors are size of business, labor efficiency, rates of production, and cost control. The averages presented here are not intended to represent what is "best". They are to help you see how your farm business compares with those of a group of your competitors.

#### SIZE OF BUSINESS

In general, large farms pay better than small farms. Larger farms make it possible to use equipment and other items of production more efficiently. However, some 40 cow farms make larger incomes than others with 100 cows. This can happen when other factors are not in balance with size of business.

#### MEASURES OF SIZE OF BUSINESS

		Average per	farm
Item	My farm	37 Central Plains farms, 1968	548 New York farms, 1967
Number of cows		57	51
Pounds of milk sold		710,800	616,600
Man equivalent	Andrews of the Control of the Contro	2.3	1.9
Total work units	And the state of t	788	594

In the following table, the New York dairy farms have been sorted into vari size groups. For each size group the average labor income per operator is shown. Sorting the farms in this manner shows the relationship between size of business and labor income.

COWS PER FARM AND LABOR INCOME 548 New York Dairy Farms, 1967

Number	Number	Labor income
of cows	of farms	per operator
Under 25	22	\$ 3,560
25-39	176	5,350
40-54	170	7,380
55-69	104	8,800
70-84	38	11,020
85-99	11	11,790
100 and over	27	13,360

#### RATES OF PRODUCTION

High rates of production of both animals and crops are very important to the success of a farm business. However, when high crop and animal yields are achieved without regard to costs, net income is reduced. In general, it pays to increase yields up to the point where the last unit of input (such as feed or fertilizer) is just paid for by the increase in output due to this last unit of input.

#### MEASURES OF RATES OF PRODUCTION

My farm	Average pe 37 Central Plains farms, 1968	r farm 548 New York farms, 1967	
	12,500	12,100	
	3.0	2.6	
	15	17	
	73	50	
	68	80	
	My farm	37 Central Plains farms, 1968  12,500  3.0  15  73	

The relationship of production per cow to labor income on three sizes of farms is shown in the following table for 548 New York dairy farms in 1967.

MILK SOLD PER COW AND LABOR INCOME 548 New York Dairy Farms, 1967

Pounds	114 farms		252 farms 35-54		182 farms	
milk sold per cow	Percent of farms	Labor income	Percent of farms	Labor income	Percent of farms	Labor income
Less than						
10,000	15	\$2,588	12	\$4,325	10	\$ 8,818
10,000-10,999	18	4,311	13	5,399	9	6,636
11,000-11,999	25	5,246	23	6,085	23	9,141
12,000-12,999	20	4,773	18	7,285	20	10,831
13,000-13,999	11	5,347	19	7,838	24	11,418
14,000 & over	11	6,687	15	9,814	14	12,375

#### LABOR EFFICIENCY

Labor is one of the limiting resources on many dairy farms. Efficient use of labor tends to add to the profitability of a farm business. The productivity of labor can be increased by use of modern equipment and buildings. However, one must be careful not to invest in equipment or buildings that add little to productivity in relation to their cost.

#### MEASURES OF LABOR EFFICIENCY

		Average per	farm
Item	My farm	37 Central Plains farms, 1968	548 New York farms, 1967
Number of cows per man		25	27
Pounds of milk sold per man		3,090	324,500
Work units per man	4-74-12M-14M-14M-1-11M	352	313

The relationship between milk sold per man and labor income is illustrated in the table below.

MILK SOLD PER MAN AND LABOR INCOME 548 New York Dairy Farms, 1967

Pounds	114 farm less than		252 farm 35-54	· ·	182 farms 55 cows ar	
milk sold per man	Percent of farms	Labor income	Percent of farms	Labor income	Percent of farms	Labor income
Under 200,000	24	\$3 <b>,</b> 073	5	\$3,521	2	\$ 4,334
200,000-299,99	9 49	4,745	37	5,647	16	7,561
300,000-399,99	99 25	6,235	35	7,291	53	9,370
400,000 & over	2	6,499	23	9,090	29	13,513

#### COST CONTROL

Obtaining high production at reasonable cost is one of the keys to a profitable farm business. The exact level of production items to be used to obtain the greatest net return is difficult to determine. The averages presented here may help you find some of the weaknesses in the cost structure on your farm.

#### FEED COSTS

Feed bought is the largest single expense item on most dairy farms. The success of a dairy farm manager depends to a large degree on his ability to provide a good feeding program for his herd at reasonable cost. Because the feeding program includes both purchased and homegrown feed, and both roughage and concentrates, it is not easy to locate the weak spots in efforts to control feed costs. The items on this page all have a bearing on feed costs, and may be helpful in planning a more efficient feeding program.

#### SELECTED FACTORS RELATED TO FEED COSTS

		Average per 37 C. Plains 5	farm 48 New York
Item	My farm	<del>-</del> •	farms, 1967
Purchased Feed			
Dairy feed bought	\$	\$ 6,632	\$ 8,440
Feed bought per cow	\$	\$ 112	\$ 165
Feed bought as % of milk receipts	%	17%	26%
Feed bought per cwt. of milk sold	\$	\$ 0.93	\$ 1.37
Roughage Harvested (hay equivalent)			•
Hay (tons)		246 tons	182 tons
Hay crop silage (tons : 3)		6 tons	13 tons
Corn silage (tons : 3)	***************************************	. 163 tons	136 tons
Total tons hay equivalent		415 tons	331 tons
Tons hay equivalent per cow		7.3 tons	6.5 tons
Other Considerations	***************************************	:	
Total acres in crops per cow		4.0 acres	2.5 acres
Lime & fertilizer expense/cow	\$	\$ 55	\$ 30
Lime & fertilizer expense/crop acre	\$	\$ 14	\$ 12
Heifer number as % of cow numbers	%	74%	65%
•			

The above measures of harvested roughage consider only the quantity. Quality is also significant and has a bearing on purchased feed and milk production.

#### FARM POWER AND MACHINERY COSTS

On today's dairy farms, power and machinery costs account for a large part of the total costs. For this group of farms, power and machinery costs were 23 percent of the total farm expenses.

#### POWER AND MACHINERY COSTS\*

		Average pe	er farm
Item	My farm	37 C. Plains farms, 1968	548 New York farms, 1967
Beginning inventory	\$	\$26,430	\$17,808

Net machinery cost per man	\$	\$4,803	\$ 3,6
Net machinery cost/cwt. milk s	old \$	_ \$ 1.55	\$ 1.

<sup>\*</sup> Does not include insurance, housing, or farm labor on repairs

#### LABOR AND MACHINERY COSTS

Most farm operators justify major machinery purchases as a way to save labor and increase productivity. How well labor and machinery are combined has an important bearing on farm profits.

LABOR AND POWER AND MACHINERY COSTS

Liebberg Lover Learth deposition attention (1986) (1988) - etc.

		Average per farm

25	262,600	8,500	.8	9	17	179,500

<sup>\*</sup> These farms are considerably above the average for all farms in New York State. For example, the average number of cows for the 548 farms was 46 compared with 38 for all farms in the State.

The Farm Business Chart is a tool which can be used in analyzing a business to determine the strong and weak points. The chart shows how far the individual farm is above or below the average of the 548 farms for each factor.

The figure at the top of each column is the average of the top ten percent of the farms for that factor. For example, the figure 105 at the top of the column headed "No. of Cows" is the average number of cows on the ten percent of the farms with the most cows. The other figures in each column are the average for the second ten percent third ten percent, etc. The figure at the bottom of each column (25 for No. of Cows) is the average for the ten percent of the farms which ranked lowest in that factor.

Each column of the chart is independent of the others. The farms which are in the top ten percent for one factor would not necessarily be the same farms which make up the top ten percent for any other factor.

This chart is used in analyzing a particular dairy business by drawing a line through the figure in each column which shows where the farm being analyzed stands for that factor. This helps identify the strengths and weaknesses. Summarize these and list them at the bottom of page 17.

#### COST CONTROL FACTORS

The cost control factors are ranked from low to high. For cost control factors, he lowest cost is not necessarily the most profitable. In some cases, the "best" light be somewhere near the average. Many things affect the level of these costs, and these items must be taken into account when analyzing the factors.

		Cost Control	
Feed	% Feed is	Feed and	Machinery
bought	of milk	crop expense	cost
per cow	receipts	per cwt. milk	per cow
\$ 75	13%	\$1.07	\$ 82
110	18	1.32	98
128	21	1.46	109
143	23	1.58	118
157	25	1.68	129
173	27	1.79	141
187	29	1.90	150
204	32	1.99	162
225	34	2.12	180
260	39	2.37	217

#### Factors Affecting Feed Cost:

tons hay equivalent per cow quality of forage ratio of cows to heifers lbs. milk sold per cow quantity of home grown grain average price of milk

#### Factors Related to Machinery Costs:

amount of machinery
use made of machinery
substitution of machinery for labor
new vs. old machinery
mechanical skill of operator

#### STRONG AND WEAK POINTS

After analyzing the business and determining changes to be considered, each possible change should be studied in detail. The work sheet or budgeting form found on pages 22 and 23 can be used for projecting the likely results of each alternative.

#### III. Additional forward planning steps and pointers

- 1. List new capital items associated with the change including land, buildings, machinery and cattle. Estimate their cost.
- 2. Estimate changes in receipts and expenses (Part IV) considering all input and production items that are affected by the change under consideration. Adjust present figures if anticipated price changes are used in the budget.
- 3. When analyzing the effects of the proposed change, fulfillment of non-monetary goals may be considered.
- 4. More than one alternative change should be considered.

### IV. Estimating changes in receipts and expenses

		Present	Net change (plus or minus)	Future with change

	LABOR INCOME	\$		\$

#### Selected Competitive Dairy Areas

A good manager aims to know how his business stands in relation to his competition both at home and in other dairy areas. The table below presents data from four states. These data were taken from reports on farm business management projects similar to the ones in New York. Some measures have been adjusted so that they are comparable for the four states.

1967 DAIRY FARM BUSINESS SUMMARY DATA

#### Family Living Expenditures

Family living expenses have first claim on farm income. In any farm business financial planning, it is important that the family living expenses be considered.

The 1967 family living expenditures for 99 Michigan farm families are reported below. These families were cooperators in the Michigan electronic farm accounting program. These data give an indication of the living expenses for some farm families. The total living expenses of individual families varied from \$2,766 to \$16,429. The high family had education expenses of \$4,051.

FARM FAMILY LIVING EXPENDITURES 99 Michigan Farm Families, 1967

Expenditure	My family	Average of 99 families	Percent of total
Food	\$	\$1,626	22
Housing		1,449	19
Transportation		793	10
Personal insurance	•	778	10
Clothing	•	628	8
Medical care		557	7
Gifts and contributions		488	7
Personal taxes		362	5
Recreation		255	3
Education		255	3
Personal care		84	1
Miscellaneous		277	5
TOTAL LIVING EXPENSES	\$	\$7,552	100

SOURCE: Michigan State University Agricultural Economics Report No. 106

These 99 families had an average of 5.6 persons per family. The average age of the husband was 42 and the wife 39.

The various living expense items are affected considerably by the number of family members, their ages, health, and interests, and the educational requirements of the children. A family must consider these factors when evaluating their expenditures or in making estimates of the amount of money to include for family living.
