DATRY FARM BUSINESS SUMMARY CENTRAL NEW YORK 1969

The County Cooperative Extension Associations in New York State have enrolled dairy farmers in farm business management projects for a number of years. For 1969, fourteen farmers in Cayuga, Madison, Onondaga, and Oswego Counties submitted their records for summary and analysis by the Department of Agricultural Economics. The figures for each farm were checked, put on electronic data cards, and put through a computer for summary and analysis. The group results are presented in this workbook.

This report is organized so that a farm business can be systematically summarized and analyzed by going through the report page by page. Spaces are available for filling in the figures for your farm or any farm that may be under study.

This workbook may be used by a farm family to study their business or it can be used by a group as a basis for a farm management discussion. In addition to the members of the Farm Business Management Projects, this report should be useful to other dairymen in Central New York, to teachers of agriculture, other agency representatives, and to agribusinessmen in the area.

This summary was prepared by C. A. Bratton, Department of Agricultural Economics, New York State College of Agriculture, in cooperation with Cooperative Extension Agent, George E. Monroe.

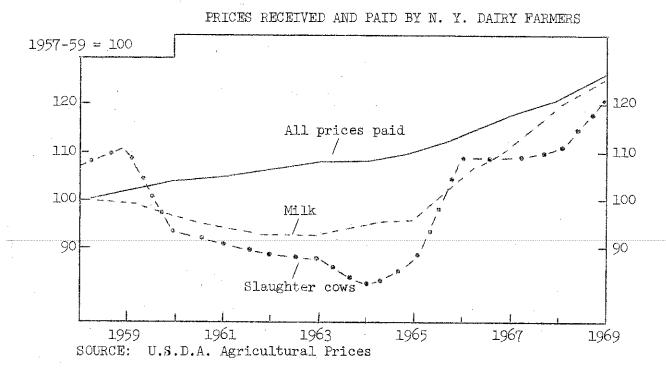

How do you measure up?

- Have you developed a systematic approach to management problems?
- Do you have the facts on your business?
- Are you improving your managerial skills?

Steps in making a management decision:

- Locate the trouble spot (problem)
- 2. What is your objective? (goal)
- 3. Size up what you have to work with (resources)
- Look for various ways to solve the problem (alternatives)
- Consider probable results of each way (consequences)
- Compare the expected results (evaluate)
- Select way best suited to your situation (decision)
- Put the decision into operation (action)

This workbook can help you.

Prices are one of the important factors affecting farm incomes. The relationship of prices received and prices paid determines the general level of farm incomes. The blended New York farm price for 3.5% milk in 1969 averaged \$5.67 per hundredweight. This was 24 cents higher than the average for 1968 and \$1.40 more than 1965. Cull dairy cow prices also were good in 1969. The overall index of prices paid by New York dairy farmers continued to rise in 1969.

In recent years, prices of some farm inputs have risen while others have declined. From 1965 to 1969, farm wages rose 35 percent, dairy cows rose 141 percent, while feed declined 3 percent, and fertilizer prices declined slightly. These differences give rise to management questions concerning substitutions.

AVERAGE YEARLY PRICES RECEIVED AND PAID BY N. Y. FARMERS, 1960-69

Year	Milk (cwt.)	Slaughter cows (cwt.)	Dairy cows (head)	Dairy ration (ton)	Wages per month with house	Prices paid by New York dairymen
1960	\$4.31	\$15.00	\$278	\$71	\$210	104
1961	4.21	14.60	- 260	72	213	105
1962	4.14	14.26	245	74	218	106
1963	4.10	14.01	234	76	221	108
1964	4.21	13.17	237	74	227	108
1965	4.27	13.91	238	76	235	110

1968	5.43	17.58	319	74	306	121
1969*	5.67	19.42	336	74	316	126

^{*} Preliminary

SUMMARY OF THE FARM BUSINESS

Physical Resources

Management has been defined as "using what you've got to get what you want." A farmer must manage with the resources available to him. Limited resources restrict what can be done and the income that can be earned. In analyzing a farm business, we first look at the labor or human resources, the livestock, and the land resources that were used.

LABOR, LIVESTOCK, AND LAND RESOURCES USED 14 Central New York Farms, 1969

Item	My farm	Average 14 farms	Average 568 N.Y. farms 1968
Talan (months)			
<u>Labor (months)</u> Operator		15.4	13. 9
Family paid		3.9	2.7
Family unpaid		2.0	1.8
Hired & other		10.3	<u>6.3</u>
Total		31.6	24.7
Man equivalent		2.6	2.1
Livestock (number) Cows		87	58
Crops (acres grown)			
Hay		(13) 111*	86*
Corn silage		(13) 72*	4 <u>1</u> *
Corn grain		(6)63*	NA
Oats	- 10° W	(5) 34*	25*
Wheat	ter springer, springer among per allege *447-9544- Suise*	(4) 27*	NA
Total Acres of Crops		258*	155*
•			

^{*} Average for farms reporting so acres do not add to total. Number of farms reporting is in parenthesis.

The average man equivalent of 2.6 indicates that these were "family farms." Two-thirds of the labor was provided by members of the family. The amount of manpower on farms is one of the few factors that has shown no appreciable increase over the years.

Of the 14 farms, 8 reported DHIA production records, 2 had owner-sampler records, and 4 reported no production records.

Capital Investment

Capital is an important resource in a farm business. The end-of-year inventory is used as the measure of capital investment. The inventory should reflect the "fair market value" or what things would bring at a well-attended sale.

FARM INVENTORY VALUES, JANUARY 1, 1970 14 Central New York Farms

		Average	14 farms
Item	My farm	Amount	Percent
Machinery & equipment	\$	\$35,385	21
Livestock		40,177	23
Feed & supplies		11,369	7
Land & buildings		84,250	49
TOTAL INVESTMENT	\$	\$171,181	100

Total investment on the 14 farms averaged \$171,200, but eight farms had investments of over \$200,000 while four farms were below \$100,000.

Below are some measures used in analyzing how efficiently the capital was used.

CAPITAL INVESTMENT ANALYSIS

Item	My farm	Average 14 farms 1969	Average 568 N.Y. farms 1968
Total investment/man	\$	\$65,839	\$53,300
Total investment/cow	\$	\$1,968	\$1,930
Machinery investment/cow	\$	\$407	\$435
Land & buildings/cow	\$	\$968	\$890
Land & buildings/crop acre	\$	\$327	\$334

Real estate values for dairy farms are sometimes related to the number of cows the farm can carry or the acres of cropland. The average land and buildings value per cow for these Central New York farms was about \$950 and the per acre of cropland value was about \$325. These are useful guidelines when you consider what a farm might be worth.

Receipts

Many businesses are described in terms of their gross sales. This can apply to farm operations as well as others. An examination of the farm receipts gives an indication of the sources of income for the business.

FARM RECEIPTS
14 Central New York Farms, 1969

Item	My farm	Average Amount	14 Farms Percent
		166	00
Milk sales	\$	\$66,505	88
Livestock sales		6,300	8
Crop sales		1,477	2
Machinery sales	***	7	
Government payments	<u> </u>	505	1
Custom machine work		77	٠.٠
Gas tax refunds		5	
Other		1,100	7
Other	With the second second	1,200	
Total Cash Farm Receipts	\$	\$75,9 7 6	100
Increase in Inventory	· 	9,594	
•			
TOTAL FARM RECEIPTS	\$	\$85,570	,

Increases in inventory are included in the farm receipts since these items could have been sold and turned into cash and still have the same business at the end of the year as at the beginning. The costs of producing or acquiring these items are included in the expenses. The increases averaged about \$3,100 for machinery, \$1,400 for cattle, \$1,700 for feed and supplies, and \$3,400 for land and buildings.

The average price received for milk was \$5.75 with a range from \$5.55 to \$5.99. The New York State average for 1969 was reported as \$5.67.

INCOME ANALYSIS

Item	My farm	Av. J4 Farms Central N.Y.	Av. 55 Farms Lewis County
Av. price/cwt. milk sold	\$	\$5.75	\$5.58
Milk sales per cow		\$764	\$672
Total cash receipts/man		\$29,222	\$23,700

Expenses

Keeping check on expenses is an important job of the manager of any business. The first step is to know what the expenses are and how they compare with others in similar businesses.

FARM EXPENSES
14 Central New York Farms, 1969

Item			14 Farms
Toen	My farm	Amount	Percent

Decrease in inventory		/30 	
TOTAL FARM EXPENSES	\$	\$62,247	

Financial Summary of Year's Business

The income from a farm business can be measured in several ways.

Farm income measures the return from the business to all capital and the operator's labor and management. Farm income is the difference between total receipts, including increase in inventory, and total expenses, including decrease in inventory but excluding interest payments.

LABOR INCOME
14 Central New York Farms, 1969

Mr Form		14 Farms
My raim	Amount	1.61.00110
\$	\$85,570	100
(†	62,247	7 3
φ	11,647	13
\$	\$11,676 18	14
\$	\$ 9,081	
	My Farm \$ \$ \$ \$	## ## ## ## ## ## ## ## ## ## ## ## ##

Labor income is the return to the farm operator for his labor and management. This is the measure most commonly used when studying or comparing farm businesses. To get the labor income, a seven percent interest charge on all capital is subtracted from the farm income. (Interest paid on debts is not included in the farm expenses.) The average labor income per operator for the 14 farms was \$9,081 but the range was from minus-\$1,370 to \$28,000. Six farms had labor incomes per operator of more than \$10,000.

Farm cash flow reflects the cash available from the year's operation of the farm business for family living, interest and debt payments, and new purchases or investments. A family may have had additional cash available if they had a non-farm income.

FARM CASH FLOW 14 Central New York Farms, 1969

Item	My farm	Average 14 farms
Total cash receipts	\$	\$75,976
Total cash operating expense		46,585
NET FARM CASH FLOW	\$	\$29,391

RETURN ON INVESTMENT 14 Central New York Farms, 1969

Item	My farm	Average 14 farms
Farm income	\$	\$23,323
Value of operator's labor*	' ' 	5,349
RETURN ON INVESTMENT	\$	\$17,974
Average capital investment	\$	\$166,384
RATE OF REPURN ON INVESTMENT		10.8%
Average capital investment	\$%	\$166,38

^{*} Average wage \$80 per week. Some farms had more than one operator.

Return on investment is calculated by deducting a charge for the operator's labor from the "farm income." This is then divided by the average investment for the year to determine the rate of return on investment. Return on investment measures the return to capital and management.

Profit is a measure used in non-farm businesses where the management input is hired. In some farm management studies, the "management input" has been valued at 8 percent of the total cash receipts. This is based on the charge made by commercial "Services" which manage farms for landowners. When this is done, the operator's labor is valued at the average wage for hired men with houses. Using this procedure, the average Farm Income would be allocated as follows:

	Av. 14 Farms	Your Farm
Farm Income Operator's labor @ \$80/wk. Management @ 8% cash recei Interest on capital @ 7%	pts 6,078	\$
,.	<u>11,647</u> 23,074	***************************************
PROFIT	\$ 249	\$

Returns per cow can be calculated by dividing the farm business measures by the number of cows:

	Av. 14 Farms	Your Farm
Net Farm Cash Flow per cow Farm Income per cow	\$338 268	\$
Labor Income per cow Profit per cow	13 <u>4</u> 3	

ANALYSIS OF THE FARM BUSINESS

A farmer makes use of the known farm business management principles in organizing his business. Once the farm is operating, he must keep close watch for leaks in the operation. This can be done by analyzing the operation on the basis of the important business factors. On the pages that follow, several business factors are examined.

Size of Business

Size of farm has an effect on other factors such as labor efficiency and cost control. The prices received and paid by a farmer are often affected by the volume which is a function of size. Farm management studies have shown that in general larger farm businesses make larger labor incomes. Two basic reasons for this are that larger businesses make possible more efficient use of overhead inputs such as labor and machinery, and there are more units of production (milk) on which to make a profit.

MEASURES OF SIZE OF BUSINESS 14 Central New York Farms, 1969

Measure	My farm	Average 14 farms 1969	Average 568 N.Y. farms 1968
Number of cows Pounds of milk sold Man equivalent Total work units Total cash receipts	\$	87 1,157,200 2.6 921 \$75,976	58 715,200 2.1 692 \$45,086

In the table below, the 568 New York farms for 1968 are sorted into various size groups and the labor income is shown for each size.

COWS PER FARM AND LABOR INCOME 568 N.Y. Dairy Farms, 1968

Number of cows	Number of farms	Labor income/operator
Less than 40	139	\$ 5,750
40 - 54	193	7,080
55 - 69	98	9,560
70 - 84	52	10,230
85 - 99	34	11,280
100 & more	52	15,680

Rates of Production

Good production per animal and per acre are important factors affecting farm incomes. However, these high rates of production must be obtained at reasonable costs. Production techniques must be examined from an economic point of view. Below are some measures of rates of production.

MEASURES OF RATES OF PRODUCTION 14 Central New York Farms, 1969

Measure	My farm	Average 14 farms 1969	Average 568 N.Y. farms 1968
Lbs. of milk sold/cow		13,300	12,300
Tons of hay/acre		3.3	2.8
Tons of corn silage/acre		15	14
Bushels of oats/acre		59	61
Bushels of corn/acre	***************************************	81	NA

Pounds of milk sold per cow is the measure used most frequently in examining rates of production on dairy farms. Good crop yields are important in keeping costs under control. The range in milk sold per cow was from 11,300 to 14,900 and corn silage from 11 to 20 tons per acre.

The relationship of pounds of milk sold per cow and labor income is shown below. The farms with the higher rates of production had higher labor incomes. The farms with the higher rates of production spent more for feed but it paid off as shown by the higher incomes.

MILK SOLD PER COW AND LABOR INCOME 568 New York Dairy Farms, 1968

Pounds of milk	Number	Number	Feed bought	Labor
sold per cow	of farms	of cows	per cow	income
Under 10,000	58	55	\$124	\$ 4,250
10,000 - 10,999	66	56	130	6,990
11,000 - 11,999	112	56	150	7,880
12,000 - 12,999	133	60	169	9,670
13,000 - 13,999	112	62	173	10,240
14,000 and over	87	58	198	11,560

The farms with the higher production also were larger as shown by the average number of cows.

Labor Efficiency

Labor efficiency is measured in terms of accomplishments per worker. With wage rates rising more than any other cost item, a farm operator must be concerned with keeping output in line with wage rates. This is true for both hired labor and family labor. Labor efficiency is a major factor in any farm business analysis. Below are some common labor efficiency measures.

MEASURES OF LABOR EFFICIENCY 14 Central New York Farms, 1969

Measure	My farm	Average 14 farms 1969	Average 568 N.Y. farms 1968
		445,100	340,600
Pounds of milk sold/man		33	28
Number of cows/man			330
Work units/man	- Walter Company (1997)	354	
Crop acres/man		99	73

Pounds of milk sold per man is determined by dividing the total pounds of milk sold by the man equivalent. This is a good measure of labor efficiency for dairy farms. This averaged 445,000 pounds per man on the 14 farms but ranged from a low of 219,000 pounds to a high of 708,000.

Several things affect labor accomplishments (efficiency). Among these are the amount of mechanization, the field and building layout, the work methods used, the abilities of the workers, and the overall planning of the work by the manager.

The relationship of labor efficiency to labor income is shown below. The higher the pounds of milk sold per man, the higher the income. The higher output per man was accomplished in part at least by more and higher producing cows.

MIIK SOLD PER MAN AND LABOR INCOME 568 New York Dairy Farms, 1968

Pounds of milk sold per man	Number	Number	Ibs. milk	Labor income
	of farms	of cows	per cow	per operator
Under 200,000	29	47	9,800	\$ 2,504
200,000 - 299,999	172	49	11,600	5,731
300,000 - 399,999	196	57	12,400	8,893
400,000 - 499,999	119	65	12,900	11,462
500,000 and over	52	87	13,400	16,627

Cost Control

Modern farms buy many of the production inputs. Farm expenses on dairy farms take about 70 percent of the gross receipts. Total expenses per cow average about \$600. Good expense or cost control is essential for this kind of business

Feed Costs

Feed is the number one cost item on most dairy farms. It is for this reason that feed costs are examined first. Many things affect feed costs. Some items for consideration are in the table below.

ITEMS RELATED TO FEED COSTS 14 Central New York Farms, 1969

Item	My farm	Average 14 farms 1969	Average 568 N.Y. farms 1968
Feed Expense			
Dairy feed purchased	\$	\$14,675	\$9,460
Feed purchased	,		, , ,
as % of milk receipts Feed purchased	<u></u>	22%	24%
per cwt. of milk sold Feed purchased per cow	\$	\$1.27 \$169	\$1.32 \$163
Crop expense per cow	\$	<u>\$</u> 66	\$45
Total feed & crop expense/cow Total feed & crop expense	\$	\$235	\$208
per cwt. of milk sold	\$	\$1.76	\$1.69
Roughage Harvested (hay equivalent) Hay (tons) Corn silage (tons ÷ 3) Hay crop silage (tons ÷ 2 or 3)* Total tons hay equivalent Tons hay equivalent per cow		343 339 <u>2</u> 684 7•9	234 174 <u>12</u> 420 7•2
Other Considerations Acres in crops per cow Lime & fertilizer expense/cow Lime & fertilizer expense	\$	3.0 \$44	2,7 \$30
per crop acre	\$	\$15	\$11

^{*} Depending on moisture content of silage

Power and Machinery Costs

Mechanization on farms continues at a brisk pace. Machinery inventories are at all-time highs. This makes it important to analyze the power and machinery costs. Net power and machinery costs usually account for about one-fifth of the total farm expenses. Below are some measures used in analyzing machinery costs.

POWER AND MACHINERY COSTS*
14 Central New York Farms, 1969

Item	My farm	Average 1 ¹ : farms 1969	Average 568 N.Y. farms 1968
Beginning inventory New machinery purchased	\$	\$32,278 7,809	\$22,575 6,178
Total (No. 1)	\$	\$40,087	\$28,753
End inventory Machinery sold	\$	\$35,385 7	\$25,247 168
Total (No. 2)	\$	\$35,392	\$25,415
Depreciation (Total No. 1 minus Total No. 2) Interest @ 7% on av. inventory Gas and oil Machinery repairs Bale ties Milk hauling Machine hire Auto expense (farm share) Electricity (farm share) Total power & machinery cost	\$	\$ 4,695 2,368 1,930 3,390 91 9 499 235 1,250 \$14,467	\$ 3,338 1,195** 1,136 1,605 80 435 287 247 601 \$ 8,924
Less: Gas tax refund \$ Income from machine work		\$ 5 <u>77</u> 82	\$ 81 106 187
NET POWER & MACHINERY COST	\$	\$14,385 	\$ 8,737
Net machinery cost: per cow per crop acre per cwt. milk sold per man	(9 (3 (3)	\$165 - \$56 - \$1.24 - \$5,533	\$151 \$56 \$1.22 \$4,160

^{*} Does not include insurance, housing or value of labor used in operation or repair

^{**} Interest at 5% in 1968

Labor and Machinery Costs

If a machine is added without expanding size or reducing the labor force, costs will be increased. "Labor and machinery cost" provides a measure of the efficiency of the machinery and labor combination.

LABOR AND MACHINERY COSTS 14 Central New York Farms, 1969

		Average 14 farms	Average 568 N.Y. farms
Item	My farm	1969	1968
Labor cost:			····
Value of operator's labor* Hired labor Unpaid family labor	\$	\$ 6,943 7,507 536	\$ 6,275 3,006 818
Total labor cost Net power and machinery cost	\$	\$14,986 14,385	\$10,099 8,737
TOTAL LABOR & MACHINERY COST	\$	\$29,371	\$18,836
Labor cost: per cow per cwt. milk sold	\$	\$172 \$1.30	\$174 \$1.41
Labor and machinery cost: per cow per cwt. milk sold	\$	\$337 \$2.54	\$325 \$2.63

^{*} Valued at \$5,400 per operator. Some farms had more than one operator.

Miscellaneous Cost Control Measures

Cost control applies to all expenditures both large and small. Reducing various cost items to a per cow or per acre basis provides cost control measures which are easy to understand and use. Below are some items.

<u> Ttem</u>	My farm	Average 14 farms 1969	Average 568 N.Y. farms 1968
Land & building repair/cow Taxes per cow Insurance per cow Electricity per cow	\$	\$18 24 16 14	\$13 20 12 10
Machinery depreciation/cow	\$	\$54	\$58
Machinery repair per cow		39	28
Veterinary & medicine/cow	\$	\$14	\$11
Breeding fees per cow		8	7

Farm Business Chart

The chart on pages 16 and 17 is a tool for use in analyzing a dairy farm business. It is essentially a series of measuring sticks combined into one tool.

FARM	BUSINESS	CHART	FOR	FARM	MANAGEME	CNT	COOPERATORS
	568	New Yo	ork :	Dairy	Farms,*	196	58

Size of Business Rates of Production						Labor	Efficiency

^{*} These farms are considerably above the average for all farms in New York State. For example, the median number of cows for the 568 farms was 50 compared with 36 for all farms in the State.

The Farm Business Chart is a tool which can be used in analyzing a business to determine the strong and weak points. The chart shows how far the individual farm is above or below the midpoint of the 568 farms for each factor.

The figure at the top of each column is the average of the top 10 percent of the farms for that factor. For example, the figure 4.0 at the top of the column headed "Man equivalent" is the average man equivalent on the 10 percent of the farms with the most men. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. The figure at the bottom of each column (1.1 for Man equivalent) is the average for the 10 percent of the farms which ranked lowest in that factor.

Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

This chart is used in analyzing a particular dairy business by drawing a line through the figure in each column which shows where the farm being analyzed stands for that factor. This helps identify the strengths and weaknesses. Summarize these and list them at the bottom of page 17.

Farm Business Chart contd.

The cost control factors are ranked from low to high. For cost control factors, the lowest cost is not necessarily the most profitable. In some cases, the "best" might be somewhere near the average. Many things affect the level of these costs, and these items must be taken into account when analyzing the factors.

FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS 568 New York Dairy Farms, 1968

	Cos	t Control	
Feed	% Feed is	ed is Feed and Machinery	
bought	of milk	crop expense	cost
per cow	receipts	per cwt. milk	per cow
\$ 69	11%	\$1.01	\$ 87 106

III. Additional forward planning steps and pointers

- 1. List new capital items associated with the change including land, buildings, machinery and cattle. Estimate their cost.
- 2. Estimate changes in receipts and expenses (Part IV) considering all input and production items that are affected by the change under consideration. Adjust present figures if anticipated price changes are used in the budget.
- 3. When analyzing the effects of the proposed change, fulfillment of non-monetary goals may be considered.
- 4. More than one alternative change should be considered.

Selected Competitive Dairy Areas

A good manager aims to know how his business stands in relation to his competition both at home and in other dairy areas. The table below presents data from four states. These data were taken from reports on farm business management projects similar to the ones in New York. Some measures have been adjusted so that they are comparable for the four states.

Family Living Expenditures

Family living expenses have first claim on farm income. In any farm business financial planning, it is important that the family living expenses be considered. Below are the living expenditures for families in Illinois who were in record keeping projects.

FAMILY LIVING EXPENDITURES
Illinois Farm and Urban Families, 1967

		Ave	rage of
Item	My family	176 farm families	79 urban femilies
Number in family		4.1	4.0
Average age of husband		45	40
Living Expenses		•	
Food	\$	\$ 1,200	\$ 1,299
Fuel	\	197	147
Electricity, gas, and water	********	172	242
Telephone		64	103
Household supplies and bank		148	142
Paid service and laundry		59	52
Housing		536	1,470
Furnishings and equipment	**************************************	¥27	425
Clothing		493	487
Personal care		172	294
Transportation		442	1,368

Education and reading		272	368
Church and welfare		418	365
Gifts		293	196
Total Living Expenses	\$	\$ 5,893	\$ 7,905
Income taxes		756	1,038
Social Security		245	212
Life insurance		573	489
Savings and investments		3,153	2,050
-	1		• · · · · · · · · · · · · · · · · · · ·
Total Family Expenditures	\$	\$10,620	\$11,694

The urban family living expenses averaged about \$2,000 more than the farm families. The income taxes for the urban families were higher, while their savings and investments were lower than for the farm families. Housing and transportation for urban families were considerably higher than for the farm families.

PROGRESS OF THE FARM BUSINESS

One phase of business analysis is that of comparing your business with that of other farmers. Another kind of analysis is that of comparing your current year's business with that of previous years. This shows the progress you are making. In planning ahead, it is helpful to set business targets or goals which should be related to the progress you have been making.
