DAIRY FARM BUSINESS SUMMARY

INTRODUCTION

Dairyfarmers throughout New York State submit business records for summarization and analysis through Cooperative Extension's Farm Business Management Program. Each participating farmer receives an individual farm report containing all the management information found in this publication. Averages from a compilation of the individual farm reports are published in several regional summaries and in one statewide summary.

Program Objectives

Primary objectives of the dairy farm business management program are to (1) assist farmers in developing and maintaining more complete farm business data for use in management decisions and (2) help farmers improve their management skills through appropriate use of farm record data and application of modern decision-making techniques. This report is prepared in workbook form for use in the systematic study of individual farm business operations.

The year ahead will bring increased economic pressures on the dairy farming industry. Milk prices are expected to be down three to five percent while feed and other production costs will increase. Dairyfarmers must continue to place emphasis on operating efficiency and cost control in order to maintain adequate farm incomes.

Changes in Computation

The interest charge made for using equity capital in the farm business has been reduced to five percent. This <u>real rate</u> of interest is intended to reflect the long time average rate of return that a farmer might expect to earn in investments with comparable risk to farm businesses in an economy with little or no inflation. Labor and management income does not include appreciation of farm assets, therefore, appreciation has been excluded in determining the use charge for equity capital.

Renting and leasing farm assets is becoming more common on New York dairy farms. Rental and lease payments are included as cash farm expenses. The discounted values of future financial lease payments have been added to the farm balance sheet to reflect the farmer's committed liability as well as the eventual value of the asset.

1

Dairy farm business and financial data from Albany, Rensselaer, Saratoga, and Washington counties have been combined in this report. This summary was prepared by Stuart F. Smith, Department of Agricultural Economics, New York State College of Agriculture and Life Sciences, Cornell University. The farm business and financial data was submitted by Cooperative Extension agents Tom Gallagher, David Balbian, David Wood, and John Thurgood; Agrifax coordinator William Barrett; and farm accountant Charles Raddick.

SUMMARY OF THE FARM BUSINESS

Business Characteristics

The combination of resources and management techniques used to put resources to work is an important part of planning. The tables below show important farm business characteristics, the number of farms reporting these characteristics, and the average level of resources used in production.

> MANAGEMENT SYSTEMS, PRODUCTION TECHNOLOGY AND FARM SIZE 116 Northern Hudson Region Dairy Farms, 1982

Type of Business	Number	Business Record	s Number	Dairy Records	Number

<u>Capital Investment-Farm Inventory</u> represents the market value of resources committed to the farm business at the beginning and end of the year. Increases in inventory occur with herd expansion, new machinery, and building additions and appreciation of land, buildings and livestock.

CAPITAL INVESTMENT - FARM INVENTORY 116 Northern Hudson Region Dairy Farms, 1982

	My	My Farm Ave		erage	
Item	1/1/82	1/1/83	1/1/82	1/1/83	
Livestock Feed & supplies Machinery & equipment Land & buildings	\$	\$	\$114,645 35,244 86,248 194,301	\$117,985 33,788 90,863 199,273	
TOTAL	\$	\$	\$430,438	\$441,909	

Inventory Accounting

The value of the dairy herd is influenced by market prices, herd quality and quantity. Here the changes in market value caused by inflationary or deflationary price changes, are separated from changes in inventory caused by changes in herd quality and quantity.

CHANGE IN LIVESTOCK INVENTORY 116 Northern Hudson Region Dairy Farms, 1982

Item	My Farm	Average
End of year market value	\$	\$117,985
less end at beginning prices		-121,199
Change due to price	\$	\$-3,214
End inventory at beginning prices	\$	\$121,199
less beginning of year inventory Change due to quality		-114,645
& quantity	\$	\$ 6,554

Machinery and real estate inventories, based on current market values, include a use depreciation charge and are balanced by the residual called appreciation.

MACHINERY AND EQUIPMENT INVENTORY 116 Northern Hudson Region Dairy Farms, 1982

Item	My Farm	Average
End of year market value	(1)\$	\$90,863
Beginning market value	\$	\$ 86,248
Plus machinery purchased	+	+ 13,751
Less machinery sold		- 416
Less depreciation		- 14,119
Net end investment	(2)\$	\$85,464
APPRECIATION (1 minus 2)	\$	\$ 5,399

The change in real estate value is also affected by lost capital which is the amount of a new building investment that does not increase the value of the farm.

> REAL ESTATE INVENTORY CALCULATIONS 116 Northern Hudson Region Dairy Farms, 1982

Item	My Farm	Average
End of year market value	(1)\$	\$199,273
Beginning market value	\$	\$194,301
Cost of new real estate	\$	\$6,373
Less lost capital	-	-1,096
Value of new added	+	+ 5,277
Less building depreciation	-	- 4,953
Less real estate sold		- 92
Net end investment	(2)\$	\$194,533
APPRECIATION (1 minus 2)	\$	\$ 4,740

Receipts

Receipts from the business should be large enough to cover all expenses and leave a reasonable return for the operator's labor and management. Cash receipts occur when farm products and livestock are sold or services are performed and payment is received during the year. Noncash receipts do not result from sales, but are due to appreciation in value or increases in physical quantities of inventories that occurred during the year. Most of these items could be readily transformed into cash.

Item	My Farm	Average Per Cow	Average Per Farm
CASH RECEIPTS			
Milk sales	\$	\$2,100	\$172,199

FARM EXPENSES 116 Northern Hudson Region Dairy Farms, 1982

Farm Business Profitability

The results of management are reflected in the net return from the business. Four common ways to measure the returns from a farm business are reported here.

Net cash farm income reflects the cash available from the year's operation of the business. Family living has first claim on cash income followed by fixed payments on debts. A family may have additional cash available if they have nonfarm income. Cash flow is not a good measure of farm business profits, but it is useful when planning debt repayment programs. Guidelines for annual cash flow planning are presented on page 9. Monthly cash flow planning is also recommended and may be required in order to identify cash flow problems in the year ahead. This is particularly true when major changes in the business are planned or when the price of important factors such as milk or purchased grain are expected to change significantly.

NET CASH FARM INCOME Northern Hudson Region Dairy Farms, 1982 and 1981

Item	My Farm	116 Farms 1982	78 Farms 1981
Cash Farm Receipts	\$	\$190,420	\$182,645
Cash Farm Expenses		156,679	146,207
NET CASH FARM INCOME	\$	\$ 33,741	\$ 36,438

Labor and management income is the return to the operator for his or her labor and management input into the business. A five percent charge for the use of the operator's equity capital in the business has been included as a farm expense. This interest charge reflects the long term average rate of return that a farmer might expect to earn in investments with comparable risk to farm businesses in an economy with little or no inflation. Labor and management income is the measure used most commonly when comparing farm businesses. Appreciation in livestock, machinery and real estate inventories is excluded from labor and management income.

LABOR AND MANAGEMENT INCOME Northern Hudson Region Dairy Farms, 1982 and 1981

Item	My Farm	116 Farms 1982	78 Farms 1981
Total farm receipts excluding appreciation	\$	\$196,974	\$188,922
Total farm expenses		195,470	182,366
LABOR & MANAGEMENT INCOME	\$	\$ 1,504	\$ 6,556
Full-time operator-manager equivalents	s	1.34	1.33
LABOR & MANAGEMENT INCOME PER OPERATOR-MANAGER	\$	\$ 1,122	\$ 4,929

Labor, management and ownership income per operator reflects the combined return to the farmer for his/her triple role of worker-manager, financier and owner. Again, this is not a measure of the cash flow situation of the farm business. A satisfactory labor, management and ownership income does not eliminate cash flow problems if liabilities are large and repayment is rapid.

Item	My Farm	116 Farms 1982	78 Farms 1981
Total farm receipts	\$	\$203,899	\$199,588
Total farm expenses excluding interest on equity capital		180,446	167,600
LABOR, MANAGEMENT AND OWNERSHIP INCOME PER FARM	\$	\$ 23,453	\$ 31,988

LABOR, MANAGEMENT AND OWNERSHIP INCOME PER OPERATOR-MANAGER	\$	\$ 17,502	\$ 24,051

LABOR, MANAGEMENT AND OWNERSHIP INCOME Northern Hudson Region Dairy Farms, 1982 and 1981

<u>Return on equity capital</u> measures the net profit remaining to the farmer's owned or equity capital after earnings have been allocated to the owner-operator's labor and management. The earnings or amount of gross profit allocated to labor and management is the opportunity cost or value of operator's labor and management estimated by the cooperators. Return on equity capital is computed including appreciation in the table below.

	RETURN O	EQUITY	CAPITAL	
Northern	Hudson Region	n Dairy 1	Farms, 19	82 and 1981

Item	My Farm	116 Farms 1982	78 Farms 1981
Labor, management & ownership income per farm	\$	\$23,453	\$31,988
Less value of operator's labor & management		20,059	19,549
Return on equity capital	\$	\$ 3,394	\$12,439
RATE OF RETURN INCLUDING APPRECIATI	ON%	1.1%	4.2%
RATE OF RETURN EXCLUDING APPRECIATI	ON%	-1.2%	0.6%

The rate of return on equity capital is computed by dividing the amount returned by farm net worth or equity capital. It is shown with and without appreciation included.

Farm Family Financial Situation

The financial situation is an important part of the farm business summary. It has a direct affect on current cash outflow and future capital investment decisions. Financial lease obligations are included in the balance sheet. The present value of all future payments is listed as a liability since the farmer is committed to make the payments. The payments are also listed as assets, representing the future value the item has to the farmer.

Payment ability is the most important consideration in determining if and how proposed investments should be financed. The farm business must produce sufficient cash income to meet operating expenses, to cover family or personal living expenses, to make payments on debts and to cover cash purchases of capital items that occur during the year. Interest paid and income from off-farm work are added to net cash farm income in the following table because planned or budgeted debt payments will include interest as well as principal. Estimate family living expenses for your farm to calculate cash available for debt payment and capital purchases made in cash.

Several farms in the group have scheduled debt payments exceeding 35 percent of the milk receipts. Committing this much cash inflow to debt payments creates a serious cash flow problem.

Item	My Farm	Average Per Farm

*Estimated as \$10,200 per family plus four percent of cash farm receipts.

ANALYSIS OF THE FARM BUSINESS

When analyzing a farm business, a manager must consider measures or factors that reflect the performance of specified parts of the farm business. To do this one must look at factors of size, rates of production, labor efficiency, capital efficiency and cost control. These measures and factors are detailed on the following pages.

Size of Business

Studies have shown that, in general, larger farms are more profitable than smaller farms. Larger businesses make possible more efficient use of overhead inputs such as labor and machinery and there are more units of production on which to earn a profit. Profitable farm businesses with good management have the ability and incentive to become larger. Large farms are not necessarily more profitable however, and size increases are only profitable with good management.

		116 Farms	78 Farms
Item	My Farm	1982	1981
Number of cows		82	79
Number of heifers		68	57
Pounds of milk sold		1,218,300	1,153,200
Worker equivalent		2.83	2.75
Total work units	and a second	932	876
Total tillable acres		284	283

MEASURES OF SIZE OF BUSINESS Northern Hudson Region Dairy Farms, 1982 and 1981

In the table below, the 553 New York farms for 1981 are sorted by number of cows and the labor and management income is shown for each size group. In general, the large farms paid better, but, variability of income was significant.

Number of Cows	Ave. Number of Cows	Number of Farms	Percent of Farms	Labor & Mgmt. Income Per Operator
Under 40	34	82	16	-\$ 4,300
40 to 54	47	130	25	- 6,077
55 to 69	61	110	21	- 1,204
70 to 84	77	74	13	- 5,284

180 to 199	187	8	2	3,497
200 & over	267	21	2	11,178

COWS PER FARM AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Rates of Production

Crop yields and rates of animal production are factors that have a significant impact on farm incomes. Here is a description of crops grown and yields along with the pounds of milk sold per cow.

	My F	arm	Avera	age of Fai	rms Reporting
Crop	Acres	Yield	Farms	Acres	Yield/Acre
Dry hay			105	(com)	oined below)

Milk sold per cow		in annal anna anna anna anna anna a		14,8	857 pounds

CROP YIELDS & MILK SOLD PER COW 116 Northern Hudson Region Dairy Farms, 1982

Tons of dry matter per acre from all hay and silage is a good measure of the overall rate of forage production.

The importance of strong milk output per cow is shown in the table below.

Pounds of Milk Sold Per Cow	Number of Farms	Number of Cows	Labor & Mgmt. Income/Oper.	Labor, Mgmt., & Owner- ship Income/Operator
Under 11,000	50	50	-\$ 8,642	\$ 5,165
11,000 to 11,999	30	67	- 5,687	13,593
12,000 to 12,999	48	76	- 17,052	9,159
13,000 to 13,999	96	78	- 5,925	20,818
14,000 to 14,999	117	83	- 6,178	26,893
15,000 to 15,999	109	89	302	32,468
16,000 to 16,999	52	82	2,142	30,451
17,000 to 17,999	28	78	1,716	27,606
18,000 & over	23	89	1,861	45,290

MILK SOLD PER COW AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Labor Efficiency

Labor input is an important factor in farm production. Several measures of accomplishment per worker (labor efficiency) are shown below.

Item	My Farm	116 Farms 1982	78 Farms 1981
Worker equivalent		2.83	2.75
Cows per worker		29	29
Lbs. milk sold per worker		430,495	419,345
Work units per worker		329	319

MEASURES OF LABOR EFFICIENCY Northern Hudson Region Dairy Farms, 1982 and 1981

Number of cows per worker is calculated by dividing the average number of cows by the worker equivalent which represents the total farm labor force. Pounds of milk sold per worker is an important measure of labor efficiency on the dairy farm. It measures the ability of the labor force to handle a large number of cows without sacrificing milk output per cow.

It is important to look at other measures of labor efficiency, such as work units per worker because all dairy farms do not have the same relationship between cows, heifers, and crops grown.

Labor efficiency depends on a number of things. Among these are the amount of mechanization, the field and building layout, the work methods, and the abilities of the workers. All of these are management items under the control of the operator.

Another factor which may influence the productivity of labor is the wage paid to employees. A productive employee will require a reasonable and competitive wage.

Pounds of Milk Sold Per Worker	No. of Farms	No. of Cows	Lbs. Milk Per Cow	Labor & Mgmt. Income Per Operator	Labor, Mgmt., & Ownership Income Per Operator
Under 250,000	68	44	11,609	-\$9,348	\$ 5,325
250,000 to 299,999	58	53	13,185	- 7,361	12,436
300,000 to 349,999	77	62	14,060	- 6,337	19,102
350,000 to 399,999	91	67	14,178	- 3,738	19,365
400,000 to 449,000	81	77	14,849	- 1,350	24,137
450,000 to 499,999	60	93	14,799	- 5,635	30,006
500,000 to 599,999	79	108	15,500	1,741	39, 315
600,000 & over	39	158	15,461	- 3,751	54,391

MILK SOLD PER WORKER AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Capital Efficiency

Capital is a key resource in dairy farm businesses and a manager must continually analyze its use in the business. The measures of capital efficiency shown in the following table include owned as well as borrowed capital. It is possible for the business to be undercapitalized, but investing too much capital per productive unit is a more common problem.

Item	My Farm	116 Farms 1982	78 Farms 1981
Farm capital per worker	\$	\$156,152	\$158,852
Farm capital per cow	\$	5,138	5,393

MEASURES OF CAPITAL EFFICIENCY Northern Hudson Region Dairy Farms, 1982 and 1981

Land and building investment per crop acre owned shows the relationship between investments in land and buildings. The farmer who owns little cropland but builds many farm buildings will have a relatively large land and building investment per crop acre owned. This could be an indication that capital use is out of balance.

Capital turnover is calculated by dividing the total farm capital (total year end farm inventory) by the total farm receipts for the year. The factor is called capital turnover because it measures the number of years of receipts needed to equal or "turnover" farm capital. A fast rate of turnover is more desirable than a slow rate because it means capital purchases can be paid off at a faster rate. This figure also depends upon the enterprise selection of the business.

Capital Turnover	Number of	Number of	Capital	Investment	Labor & Mgmt Income Per	
Rate - Years	Farms Co	Cows	Per Cow	Per Worker	Operator	
less than 1.5	9	111	\$3,369	\$104,662	\$ 22,725

CAPITAL TURNOVER AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Cost Control

The control of costs is a big factor in the success of modern commercial dairy operations. Feed, machinery and labor costs are major items and should be examined in detail. It is important to check all cost items both large and small. Expenses should be incurred only when the returns from the expense are expected to be greater than the cost incurred.

Feed Costs

Purchased feed is the largest single expenditure on most dairy farms. Two considerations are important in keeping the feed bill down: (1) Be careful that only nutrients required by the cow are being fed. A dairy farmer cannot afford to buy a feed mix that overfeeds energy or protein. (2) Be certain that the required nutrients are being obtained from their least expensive source. For example, is the lowest cost source of protein, urea, soybean meal or a commercial protein? Help in answering these questions can come from budgeting, from agribusiness people selling feeds, and from dairy and management extension agents. Extension is supporting computerized decision aids to assist in answering these questions including the NEWPLAN program, Least-Cost Balanced Dairy Rations, and the dairy ration analyzers.

The size and productivity of the cropping program has an important influence on the amount of the purchased feed bill. Increased production of either roughages or grains should reduce the purchased feed expense unless cow numbers are increased. Also, heifer raising practices affect feed costs. The overall feed situation must be examined and evaluated as a "system".

FEED COSTS AND RELATED MEASURES Northern Hudson Region Dairy Farms, 1982 and 1981

Machinery, Labor and Miscellaneous Costs

Labor and machinery operate as a team on a dairy farm. The challenge is to obtain an efficient combination of these two inputs that will result in a low cost per unit of output.

Item	My Farm	116 Farms 1982	78 Farms 1981

MANAGEMENT PERFORMANCE OF STATEWIDE COOPERATORS

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 553 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS 553 New York Dairy Farms, 1981

The cost control factors are ranked from low to high, but the <u>lowest</u> <u>cost is not necessarily the most profitable</u>. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

¹Amount available for debt service per dollar of annual scheduled debt payment, computed by dividing the available dollars by the annual payments planned. A high positive ratio indicates a strong capacity to repay debt.

²Amount of milk income committed to debt repayment, calculated by dividing scheduled debt payments by total milk sales (\$).

³Dollars of debt per dollar of equity, computed by dividing total liabilities by total equity.

⁴All farm liabilities on less than 10 year repayment divided by all farm assets excluding real estate and other long term assets.

⁵Farm liabilities on 10 years or more repayment, including all real estate mortgages, divided by the value of farm real estate and other long term assets.

⁶Return on equity capital, including appreciation, divided by farm net worth.

⁷Return on all farm capital (no deduction for interest paid) divided by total farm assets.

FARM BUSINESS SUMMARY BY HERD SIZE 553 New York Dairy Farms, 1981

	Farms with:				
	Less than	40 to	55 to	70 to	
Item	40 cows	54 cows	69 cows	84 cows	
Number of farms	82	130	110	74	
Size of Business					
Number of cows	34	47	61	77	
Number of heifers	26	35	43	59	
Pounds of milk sold	459,600	654,500	890,800	1,107,800	
Worker equivalent	1.58	2.08	2.33	2.75	
Total work units	375	528	669	858	
Total tillable acres	121	177	206	264	
(Tillable acres rented)	(31)	(46)	(66)	(86)	
Rates of Production					
Milk sold per cow	13,518	13,926	14,603	14,387	
Tons hay crop per acre	1.8	2.2	2.5	2.7	
Tons corn silage per acre	13.2	13.6	14.3	14.1	
Bushels of oats per acre	33.8	51.9	48.5	48.9	
Labor Efficiency					
Cows per worker	22	23	26	28	
Pounds milk sold per worker	290,886	314,663	382,318	402,836	
Work units per worker	237	254	287	312	
Feed Costs					
Feed purchased per cow	\$546	\$520	\$495	\$483	
Crop expense per cow	\$104	\$133	\$163	\$169	
Feed cost per cwt. milk	\$4.04	\$3.73	\$3.39	\$3.36	
Feed & crop exp. per cwt. milk	\$4.81	\$4.69	\$4.50	\$4.53	
% feed is of milk receipts	- 30%	28%	25%	25	
Hay equivalent per cow	6.7	7.9	7.7	8.0	
Tillable acres per cow	3.6	3.8	3.4	3.4	
Fertilizer & lime per crop acre	\$19	\$22	\$31	\$32	
Machinery & Labor Costs					
Total machinery costs	\$15,686	\$22,504	\$29,974	\$36,870	
Machinery cost per cow	\$461	\$479	\$491	\$479	
Machinery cost per cwt. milk	\$3.41	\$3.44	\$3.36	\$3.33	
Labor cost per cow	\$397	\$357	\$328	\$317	
Labor cost per cwt. milk	\$2.94	\$2.56	\$2.25	\$2.20	
Capital Efficiency					
Investment per worker	\$138,213	\$145,576	\$157,491	\$170,074	
Investment per cow	\$6,066	\$6,443	\$5,825	\$5,920	
Investment per cwt. milk	\$48	\$46	\$41	\$42	
Land & buildings per cow	\$3,170	\$3,084	\$2,710	\$2,866	
Machinery investment per cow	\$1,254	\$1,223	\$1,212	\$1,141	
Capital turnover	3.0	2.8	2.5	2.6	
Other					
Price per cwt. milk sold	\$13.57	\$13.50	\$13.66	\$13.66	
Acres hay crops	80	107	108	137	
Acres corn silage	17	28	40	51

FARM FAMILY FINANCIAL SITUATION BY HERD SIZE 553 New York Dairy Farms, January 1, 1982

MEASURE YOUR PERFORMANCE

After you have entered your farm business data on the pages of this workbook, categorize your farm business performance into three groups. List the strong points, those which indicate average performance and those areas which need improvement. Your business factors that exceed the regional average should be listed as <u>strong points</u>, factors that are close to the regional average should be identified as <u>average</u>, and factors that are below average should be listed under need improvement.

The Farm Business Chart on the page 18 and the Financial Analysis Chart on page 19 can be used to identify strengths and weaknesses by comparing your business with a large number of New York dairy farms summarized for the previous year. It is recommended that you use more than one standard for comparison when analyzing the farm business.

STRONG POINTS:	AVERAGE:
· ·	· · · · · · · · · · · · · · · · · · ·
NEED IMPROVEMENT:	
· · · · · · · · · · · · · · · · · · ·	

After identifying opportunities for improvement, consider alternative ways of solving each problem. List each alternative and analyze the consequences in detail. Extension conducts many schools, meetings, and provides many printed materials that should be of assistance. Local agribusinesses often provide helpful information and assistance. Seek out information related to the problem under consideration.

Another way to measure your management performance is to compare your current business factors with those from previous years. Page 17 is provided for this purpose. Answering the following questions may also help evaluate your farm business progress.

- 1) Do livestock numbers, labor force, and crop acres make up a well balanced unit of resources?
- 2) Have rates of production shown a steady increase?
- 3) When will milk output per worker reach 600,000 pounds?
- 4) Have increases in costs been limited to the effects of inflation?
- 5) Is growth in net worth keeping up with increased capital investment?
- 6) Is net cash farm income increasing fast enough to meet your needs?
- 7) Have you reached the business goals set for 1982 and have you set new goals for 1983?
