1992 DAIRY FARM BUSINESS SUMMARY  
SOUTHEASTERN NEW YORK REGION\*

INTRODUCTION

Dairy farmers throughout New York State have been participating in Cornell Cooperative Extension's farm business summary and analysis program since the early 1950's. Managers of each participating farm business receive a comprehensive summary and analysis of the farm business. The information in this report represents an average of the data submitted from dairy farms in the Southeastern New York Region for 1992.

Program Objective

The primary objective of the dairy farm business summary, DFBS, is to help farm managers improve the business and financial management of their business through appropriate use of historical farm data and the application of modern farm business analysis techniques. In short, DFBS identifies business and financial information farmers need and demonstrates how it should be used in identifying and evaluating strengths and weaknesses of the farm business.

Format Features

This regional report follows the same general format as in the 1992 DFBS printout received by all participating dairy farmers. The analysis tables have an open column or section labeled My Farm. It may be used by any dairy farm manager who wants to compare his or her business with the average data of this region. A DFBS Data Check-in Form can be used by non-DFBS participants to summarize their businesses.

This report features:

- (1) an income statement including accrual adjustments for farm business expenses and receipts, as well as measures of profitability with and without appreciation,
- (2) a complete balance sheet with analytical ratios;
- (3) a cash flow summary including debt repayment ability;
- (4) an analysis of crop acreage, yields, and expenses;
- (5) an analysis of dairy livestock numbers, production, and expenses; and
- (6) a capital and labor efficiency analysis.

Micro DFBS, a computer program which enables Cooperative Extension agents and specialists to calculate and print individual farm business reports in their offices, is now being used by the dairy farm management field staff for nearly 100 percent of the farms cooperating. This innovative approach provides faster processing of farm record data and increased use of the DFBS in farm management programs.

---

\*The Southeastern Region of New York State, with the number of participating farms in parentheses, is comprised of Columbia (15), Sullivan (13), Orange (4), and Ulster (1) counties. This report was written by Stuart F. Smith, Senior Extension Associate, Farm Management. Linda Putnam was in charge of data preparation. Maria Cilveti-Reynolds and Beverly Carcelli prepared the publication. Farm business data were collected by Cooperative Extension agents Steve Hadcock, Alan White, Gerry Skoda, and Larry Hulle.

## SUMMARY AND ANALYSIS OF THE FARM BUSINESS

Business Characteristics

Planning optimal management strategies is a crucial component of operating a successful farm. Various combinations of farm resources, enterprises, business arrangements, and management techniques are used by the dairy farmers in this region. The following table shows important farm business characteristics and the number of farms with each characteristic.

**BUSINESS CHARACTERISTICS**  
33 Southeastern New York Region Dairy Farms, 1992

<u>Type of Farm</u>	<u>Number</u>	<u>Type of Barn</u>	<u>Number</u>
Dairy	33	Stanchion/Tie-Stall	24
Part-time dairy	0	Freestall	9
Dairy cash-crop	0	Combination	0
Part-time cash-crop dairy	0		
		<u>Milking System</u>	<u>Number</u>
<u>Type of Ownership</u>	<u>Number</u>	Bucket & carry	0
Owner	20	Dumping station	1
Renter	13	Pipeline	22
		Herringbone parlor	9
<u>Type of Business</u>	<u>Number</u>	Other parlor	1
Single proprietorship	21		
Partnership	11	<u>Milking Frequency</u>	<u>Number</u>
Corporation	1	2x/day	32
		3x/day	1
<u>Business Record System</u>	<u>Number</u>	Other	0
ELFAC II	0		
Account Book	19	<u>Production Records</u>	<u>Number</u>
Agrifax (mail-in only)	9	DHIC	23
On-Farm Computer	4	Owner-Sampler	4
Other	1	Other	0
		None	6

The averages used in this report were compiled using data from all the participating dairy farms in this region unless noted otherwise. There are full-time dairy farms, part-time farms, dairy cash-crop farms, farm renters, partnerships, and corporations included in the average. Average data for these specific types of farms are presented in the State Business Summary.

Income Statement

In order for an income statement to accurately measure farm income, it must include cash transactions and accrual adjustments (changes in accounts payable, accounts receivable, inventories, and prepaid expenses).

Cash paid is the actual cash outlay during the year and does not necessarily represent the cost of goods and services actually used in 1992.

Change in inventory: Increases in inventories of supplies and other purchased inputs are subtracted in computing accrual expenses because they represent an increase in purchased inputs not actually used during the year. Decreases in purchased inventories are added to expenses because they represent inputs purchased in a prior year and used this year.

## CASH AND ACCRUAL FARM EXPENSES

33 Southeastern New York Region Dairy Farms, 1992

Expense Item	Cash Paid +	Change in Inventory or Prepaid Expense* +	Change in Accounts Payable -	Accrual Expenses
<u>Hired Labor</u>	\$20,085	\$0 <<	\$285	\$20,370
<u>Feed</u>				
Dairy grain & conc.	66,137	-1,579	932	65,490
Dairy roughage	2,477	-245	-72	2,160
Nondairy	379	1	0	380
<u>Machinery</u>				
Mach. hire, rent/lease	2,857	-45 <<	0	2,812
Machinery repairs/parts	12,304	-30	-156	12,118
Auto exp. (farm share)	492	0 <<	0	492
Fuel, oil & grease	7,156	92	133	7,381
<u>Livestock</u>				
Replacement livestock	1,682	0 <<	0	1,682
Breeding	2,836	-7	8	2,837
Vet & medicine	4,903	-9	-223	4,671
Milk marketing	13,788	0 <<	0	13,788
Cattle lease/rent	0	0 <<	0	0
Other livestock expense	10,837	-165	168	10,840
<u>Crops</u>				
Fertilizer & lime	6,887	673	-460	7,100
Seeds & plants	3,264	248	0	3,512
Spray, other crop exp.	3,148	47	-167	3,028
<u>Real Estate</u>				
Land/bldg./fence repair	4,870	-68	0	4,802
Taxes	5,402	0 <<	155	5,557
Rent & lease	8,726	0 <<	-54	8,672
<u>Other</u>				
Insurance	4,790	0 <<	-21	4,769
Telephone (farm share)	950	0 <<	0	950
Electricity (farm share)	6,086	0 <<	4	6,090
Interest paid	9,699	0 <<	0	9,699
Miscellaneous	2,813	52	0	2,865
Total Operating	\$202,568	\$-1,035	\$532	\$202,065
Expansion livestock	1,045	0 <<	0	1,045
Machinery depreciation				12,560
Building depreciation				5,273
<b>TOTAL ACCRUAL EXPENSES</b>				<b>\$220,943</b>

Change in prepaid expenses (noted above by <<) is a net change in non-inventory expenses that have been paid in advance of their use, for example, 1993 rent paid in 1992. If 1992 funds used to prepay 1993 rent exceeded the amount of 1992 rent prepaid in 1991, the amount of this excess is entered as a negative number to exclude it from 1992 accrual rental expenses. The excess prepaid rent should be charged against the future year's business operation. A decrease in prepaid rent is added to accrual expenses because it represents use of resources during this year that were paid for in past years.

Change in accounts payable: An increase in accounts payable from beginning to end of year is added and a decrease is subtracted when calculating accrual expenses.

Accrual expenses are the costs of inputs actually used in this year's production. They are the total of cash paid, as well as changes in inventory, prepaid expenses, and accounts payable.

**CASH AND ACCRUAL FARM RECEIPTS**  
**33 Southeastern New York Region Dairy Farms, 1992**

Receipt Item	Cash Receipts	Change in Inventory	Change in Accounts Receivable	Accrual Receipts
Milk sales	\$222,238		\$-1,060	\$221,178
Dairy cattle	13,275	\$4,295	-266	17,304
Dairy calves	3,138		0	3,138
Other livestock	999	445	0	1,444
Crops	1,754	7,983	0	9,737
Government receipts	4,862	0*	0	4,862
Custom machine work	624		0	624
Gas tax refund	210		0	210
Other	1,758		0	1,758
Less nonfarm noncash cap.**		(-) 0		(-) 0
Total Receipts	\$248,858	\$12,723	\$-1,326	\$260,255

\*Change in advanced government receipts.

\*\*Gifts or inheritances of cattle or crops included in inventory.

Cash receipts include the gross value of milk checks received during the year plus all other payments received from the sale of farm products, services, and government programs. Nonfarm income is not included in calculating farm profitability.

Changes in inventory of assets produced by the business are calculated by subtracting beginning of year values from end of year values excluding appreciation. Increases in livestock inventory caused by herd growth and/or quality are added, and decreases caused by herd reduction and/or quality are subtracted. Changes in inventories of crops grown are also included. An annual increase in advanced government receipts is subtracted from cash income because it represents income received in 1992 for the 1993 crop year in excess of funds earned for 1992. Likewise, a decrease is added to cash government receipts because it represents funds earned for 1992 but received in 1991.

Changes in accounts receivable are calculated by subtracting beginning year balances from end year balances. The January milk check for this December's marketings compared with the previous January's check is included as a change in accounts receivable.

Accrual receipts represent the value of all farm commodities produced and services actually generated by the farm business during the year.

### Profitability Analysis

Farm operators contribute labor, management, and equity capital to their businesses and the combination of these resources selected determines profitability. Operators are the individuals who are integrally involved in the operation and management of the farm business. They are not limited to those who are the owner of a sole proprietorship or are formally a member of the partnership or corporation. Farm profitability can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

Net farm income is the return to the farm operators and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, financing, and owning the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed both with and without appreciation. Appreciation represents the change in values caused by annual changes in prices of live-stock, machinery, real estate inventory, and stocks and certificates (other than Farm Credit). Appreciation is a major factor contributing to changes in farm net worth and must be included for a complete profitability analysis.

### NET FARM INCOME 33 Southeastern New York Region Dairy Farms, 1992

Item	Average	My Farm
Total accrual receipts	\$260,255	\$ _____
Appreciation: Livestock	13,867	_____
Machinery	5,038	_____
Real Estate	3,964	_____
Other Stock/Certificates	-243	_____
Total Including Appreciation	\$282,881	\$ _____
Total accrual expenses	- 220,943	- _____
Net Farm Income (with appreciation)	\$61,938	\$ _____
Net Farm Income (without appreciation)	\$39,312	\$ _____

The chart below shows the relationship between net farm income per cow (with appreciation) and pounds of milk sold per cow. Generally, farms with a higher production per cow have higher profitability per cow.

Return to operators' labor, management, and equity capital measures the total net farm income for the farm operator(s). It is calculated by deducting a charge for unpaid family labor from net farm income. Operators' labor is not included in unpaid family labor. Return to operators' labor, management, and equity capital has been calculated both with and without appreciation. Appreciation is an important part of the return to ownership of farm assets.

**RETURN TO OPERATORS' LABOR, MANAGEMENT, AND EQUITY**  
33 Southeastern New York Region Dairy Farms, 1992

Item	Average		My Farm	
	With Apprec.	Without Apprec.	With Apprec.	Without Apprec.
Net farm income	\$ 61,938	\$39,312	\$ _____	\$ _____
Family labor unpaid @ \$1,350 per month	- 2,984	- 2,984	- _____	- _____
Return to operators' labor, management, & equity	\$ 58,954	\$ 36,328	\$ _____	\$ _____

Labor and management income is the return which farm operators receive for their labor and management used in operating the farm business. Appreciation is not included as part of the return to labor and management because it results from ownership of assets rather than management of the farm business. Labor and management income is calculated by deducting the opportunity cost of using equity capital, at a real interest rate of five percent, from the return to operators' labor, management, and equity capital excluding appreciation. The interest charge of five percent reflects the long-term average rate of return above inflation that a farmer might expect to earn in comparable risk investments.

**LABOR AND MANAGEMENT INCOME**  
33 Southeastern New York Region Dairy Farms, 1992

Item	Average	My Farm
Return to operators' labor, management, & equity without appreciation	\$ 36,328	\$ _____
Real interest @ 5% on \$426,277 average equity capital	- 21,314	- _____
Labor & Management Income	\$ 15,014	\$ _____
Labor & Management Income per 1.56 Operator	\$ 9,624	\$ _____

Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost of operators' labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth or equity capital. Return on total capital is calculated by adding interest paid to the return on equity capital and then dividing by average farm assets to calculate the rate of return on total capital.

**RETURN ON EQUITY CAPITAL AND RETURN ON TOTAL CAPITAL**  
33 Southeastern New York Region Dairy Farms, 1992

Item	Average	My Farm
Return to operators' labor, management, & equity capital with appreciation	\$ 58,954	\$ _____
Value of operators' labor & management	- 31,724	- _____
Return on equity capital with appreciation	\$ 27,230	\$ _____
Interest paid	\$ 9,699	\$ _____
Return on total capital with appreciation	\$ 36,929	\$ _____
Return on equity capital without appreciation	\$ 4,604	\$ _____
Return on total capital without appreciation	\$ 14,303	\$ _____
Rate of return on average equity capital:		
with appreciation	6.4%	_____ %
without appreciation	1.1%	_____ %
Rate of return on average total capital:		
with appreciation	6.6%	_____ %
without appreciation	2.6%	_____ %

**Farm and Family Financial Status**

The first step in evaluating the financial position of the farm is to construct a balance sheet which identifies all the assets and liabilities of the business. The second step is to evaluate the relationship between assets, liabilities, and net worth and changes that occurred during the year.

Financial lease obligations are included in the balance sheet. The present value of all future payments is listed as a liability since the farmer is committed to make the payments by signing the lease. The present value is also listed as an asset, representing the future value the item has to the business. For 1992, leases were discounted by 8.5 percent.

Advanced government receipts are included as current liabilities. Government payments received in 1992 that are for participation in the 1993 program are the end year balance and payments received in 1991 for participation in the 1992 program are the beginning year balance.

**1992 FARM BUSINESS & NONFARM BALANCE SHEET**  
**33 Southeastern New York Region Dairy Farms, 1992**

<u>Farm &amp; Nonfarm Assets, Liabilities, &amp; Net Worth*</u>			Jan. 1	Dec. 31
Total Assets			\$738,898	\$787,996
Total Liabilities			128,949	142,817
TOTAL FARM & NONFARM NET WORTH			\$609,949	\$645,179

\*Assumes that average nonfarm assets and liabilities for the nonreporting farms were the same as for those reporting.

Balance sheet analysis involves examination of relative asset and debt levels for the business. Percent equity is calculated by dividing end of year net worth by end of year assets and multiplying by 100. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect business solvency and the potential capacity to borrow. Debt levels per productive unit represent old standards that are still useful if used with measures of cash flow and repayment ability.

### BALANCE SHEET ANALYSIS

33 Southeastern New York Region Dairy Farms, 1992

Item	Average	My Farm
<u>Financial Ratios - Farm:</u>		
Percent equity	76%	_____ %
Debt/asset ratio: total	.24	_____
long-term	.26	_____
intermediate/current	.22	_____
<u>Farm Debt Analysis:</u>		
Accounts payable as % of total debt	6%	_____ %
Long-term liabilities as a % of total debt	42%	_____ %
Current & inter. liab. as a % of total debt	58%	_____ %
<u>Farm Debt Levels:</u>		
	Per Cow	Per Tillable Acre Owned
Total farm debt	\$1,397	\$1,610
Long-term debt	583	672
Intermediate & current debt	814	938

Farm inventory balance is an accounting of the value of assets used on the balance sheet and the changes that occur from the beginning to end of year. Changes in the livestock inventory are included in the dairy analysis. Net investment indicates whether the capital stock is being expanded (positive) or depleted (negative).

### FARM INVENTORY BALANCE

33 Southeastern New York Region Dairy Farms, 1992

Item	Average of Region's Farms	
	Real Estate	Machinery & Equipment
Value beg. of year	\$210,379	\$112,929
Purchases	\$16,488*	\$17,706
Gift/inheritance	+ 0	+ 0
Lost capital	- 4,277	- --
Net sales	- 0	- 398
Depreciation	- 5,273	- 12,560
Net investment	- 6,937	- 4,748
Appreciation	+ 3,964	+ 5,038
Value end of year	\$221,282	\$122,715

\*\$6,170 land and \$10,317 buildings and/or depreciable improvements.

The Statement of Owner Equity has two purposes. It allows (1) verification that the accrual income statement and market value balance sheet are interrelated and consistent (in accountants' terms, they reconcile) and (2) identification of the causes of change in equity that occurred on the farm during the year. The Statement of Owner Equity allows you to determine to what degree the change in equity was caused by (1) earnings from the business, and nonfarm income, in excess of withdrawals being retained in the business (called retained earnings), (2) outside capital being invested in the business or farm capital being removed from the business (called contributed/withdrawn capital) and (3) increases or decreases in the value (price) of assets owned by the business (called change in valuation equity).

The change in farm net worth without appreciation is an excellent indicator of farm generated financial progress.

**STATEMENT OF OWNER EQUITY (RECONCILIATION)**

Cash Flow Statement

Completing an annual cash flow statement is an important step in understanding the sources and uses of funds for the business. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The annual cash flow statement is structured to show net cash provided by operating activities, investing activities, financing activities and from reserves. All cash inflows and outflows including beginning and end balances are included. Therefore the sum of net cash provided from all four activities should be zero. Any imbalance is the error from incorrect accounting of cash inflows/outflows.

**ANNUAL CASH FLOW STATEMENT**

### Repayment Analysis

A valuable use of cash flow analysis is to compare the debt payments planned for the last year with the amount actually paid. The measures listed below provide a number of different perspectives on the repayment performance of the business. However, the critical question to many farmers and lenders is whether planned payments can be made in 1993. The cash flow projection worksheet on the next page can be used to estimate repayment ability, which can then be compared to planned 1993 debt payments shown below.

#### FARM DEBT PAYMENTS PLANNED

Same 27 Southeastern New York Region Dairy Farms, 1991 and 1992

Debt Payments	Average			My Farm		
	1992 Payments		Planned	1992 Payments		Planned
	Planned	Made	1993	Planned	Made	1993
Long-term	\$8,219	\$12,211	\$8,769	\$_____	\$_____	\$_____
Intermediate-term	11,478	16,349	13,516	_____	_____	_____
Short-term	1,508	2,994	1,158	_____	_____	_____
Operating (net reduction)	3,556	1,968	667	_____	_____	_____
Accounts payable (net reduction)	107	0	889	_____	_____	_____
Total	\$24,868	\$33,522	\$24,999	\$_____	\$_____	\$_____
Per cow	\$267	\$360		\$_____	\$_____	
Per cwt. 1992 milk	\$1.63	\$2.20		\$_____	\$_____	
Percent of total 1992 receipts	10%	13%		_____	_____	
Percent of 1992 milk receipts	12%	16%		_____	_____	

The cash flow coverage ratio measures the ability of the farm business to meet its planned debt payment schedule. The ratio shows the percentage of payments planned for 1992 (as of December 31, 1991) that could have been made with the amount available for debt service in 1992. Farmers who did not participate in DFBS in 1991 have their 1992 cash flow coverage ratio based on planned debt payments for 1993.

#### CASH FLOW COVERAGE RATIO

Same 27 Southeastern New York Region Dairy Farms, 1991 and 1992

Item	Average	My Farm
Cash farm receipts	\$239,677	\$_____
- Cash farm expenses	192,788	_____
+ Interest paid	10,019	_____
- Net personal withdrawals from farm**	25,931	_____
(A) - Amount Available for Debt Service	\$30,977	\$_____
(B) - Debt Payments Planned for 1992 (as of December 31, 1991)	\$24,868	\$_____
(A + B) - Cash Flow Coverage Ratio for 1992	1.25	_____

\*\*Personal withdrawals and family expenditures less nonfarm income and nonfarm money borrowed. If family withdrawals are excluded, or inaccurately included, the cash flow coverage ratio will be incorrect.

Cropping Analysis

The cropping program is an important part of the dairy farm business and often represents opportunities for improved management. A complete evaluation of what the available land resources are, how they are being used, how well crops are producing, and what it costs to produce them is important to evaluating alternative cropping and feed purchasing alternatives.

**LAND RESOURCES AND CROP PRODUCTION**  
33 Southeastern New York Region Dairy Farms, 1992

Item	Average			My Farm		
<u>Land</u>	<u>Owned</u>	<u>Rented</u>	<u>Total</u>	<u>Owned</u>	<u>Rented</u>	<u>Total</u>

Wheat	1	15	40.00 bu	_____	_____	bu
Other crops	1	17		_____	_____	
Tillable pasture	4	24		_____	_____	
Idle	9	19		_____	_____	
Total Tillable Acres	33	294		_____	_____	

\*This column represents the average acreage for the farms producing that crop. Average acreages including those farms not producing were hay crop 186, corn silage 67, corn grain 29, oats 1, tillable pasture 3, and idle 5.

Average crop acres and yields compiled for the region are for the farms reporting each crop. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent based on dry matter information provided.

The following crop/dairy ratios indicate the relationship between forage production, forage production resources, and the dairy herd.

**CROP/DAIRY RATIOS**  
33 Southeastern New York Region Dairy Farms, 1992

Item	Average	My Farm
Total tillable acres per cow	3.11	_____
Total forage acres per cow	2.70	_____
Harvested forage dry matter, tons per cow	8.74	_____

**Cropping Analysis** (continued)

A number of cooperators have allocated crop expenses among the hay crop, corn, and other crops produced. Fertilizer and lime, seeds and plants, and spray and other crop expenses have been computed per acre and per production unit for hay and corn. Additional expense items such as fuels, labor, and machinery repairs are not included.

**CROP RELATED ACCRUAL EXPENSES**

33 Southeastern New York Region Dairy Farms Reporting, 1992

Item	Total Per Till. Acre	Hay Crop		All Corn Per Acre	Corn Silage Per Ton DM	Corn Grain Per Dry Shell Bu.
		Per Acre	Per Ton DM

Total	\$41,253	\$140.32	\$ _____	\$ _____

**Dairy Analysis**

Analysis of the dairy enterprise can reveal a great deal about the strengths and weaknesses of the dairy farm business. Information on this page should be used in conjunction with DHI and other dairy production information. Changes in dairy herd size and market values that occur during the year are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and quality. Any change in inventory is included as an accrual farm receipt when calculating all of the profitability measures on pages 6 and 7.

**DAIRY HERD INVENTORY**  
33 Southeastern New York Region Dairy Farms, 1992

Item	<u>Dairy Cows</u>		<u>Bred</u>		<u>Heifers</u>		<u>Calves</u>	
	No.	Value	No.	Value	No.	Value	No.	Value

+ Appreciation		___		___		___		___
End of year (owned)	___	\$___	___	\$___	___	\$___	___	\$___
End including leased	___							
Average number	___		___ (all age groups)					

Total milk sold and milk sold per cow are extremely valuable measures of size and productivity, respectively, on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year. Farm managers on DHI should compare milk sold per cow with their rolling herd average on the test date nearest December 31 to see how close the DHI estimate of milk produced is to actual milk sales.

**MILK PRODUCTION**  
33 Southeastern New York Region Dairy Farms, 1992

<u>Item</u>	<u>Average</u>	<u>My Farm</u>
Total milk sold, lbs.	1,577,783	_____
Milk sold per cow, lbs.	16,710	_____
Average milk plant test, percent butterfat	3.82	_____

The cost of producing milk has been compiled using the whole farm method and is featured in the following table. Accrual receipts from milk sales can be compared with the accrual costs of producing milk per cow and per hundredweight of milk. Using the whole farm method, operating costs of producing milk are estimated by deducting nonmilk accrual receipts from total accrual operating expenses including expansion livestock purchased. Total costs of producing milk include the operating costs of producing milk plus depreciation on machinery and buildings, the value of unpaid family labor, the value of operators' labor and management, and the interest charge for using equity capital. Total costs without operator's labor, management, and capital are the operating costs plus depreciation and unpaid family labor.

**ACCRUAL RECEIPTS FROM DAIRY AND COST OF PRODUCING MILK**  
33 Southeastern New York Region Dairy Farms, 1992

Item	Average			My Farm		
	Total	Per Cow	Per Cwt.	Total	Per Cow	Per Cwt.

## COMPARATIVE ANALYSIS OF THE FARM BUSINESS

Progress of the Farm Business

Comparing your business with average data from regional DFBS cooperators that participated in both of the last two years is one part of a business checkup. It is equally important for you to determine the progress your business has made over the past two or three years and to set targets or goals for the future.

## PROGRESS OF THE FARM BUSINESS

New York State Farm Business Charts

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 407 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

The cost control factors are ranked from low to high, but the lowest cost is not necessarily the most profitable. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

Farm Business Charts for farms with freestall barns and 120 cows or less and more than 120 cows, and farms with conventional barns with 60 cows or less and more than 60 cows are shown on pages 27-30.

**Financial Analysis Chart**

The farm financial analysis chart on page 24 is designed just like the Farm Business Chart and may be used to assess the financial health of the farm business. Most of the financial measures used in the chart are defined on pages 6, 9, 13, and 19 of this publication. References to DBFS output page numbers for participating dairy farmers are provided in the table headings.

\*\*Dollars of debt per dollar of equity, computed by dividing total liabilities by total equity.

\*\*\*Return on all farm capital (no deduction for interest paid) divided by total farm assets.

### Comparisons by Type of Barn and Herd Size

When analyzing a dairy farm business by comparing it to a group of farms, it is important that the group of farms used has as many of the same physical characteristics as possible as the farm being analyzed. To assist in this endeavor, dairy farms in the 1991 State Summary\* have been divided into those with freestall and those with conventional housing. Within each group is a further classification by size of the dairy herd.

The table on page 26 shows the average values for the resulting four groups of dairy farms. Within each housing type, the larger herd size had the higher rate of milk sold per cow but the greatest difference was between the conventional and freestall farms. The total cost of producing milk was lower on the larger farms while labor efficiency was greater. Profitability was higher on the larger farms as well as the freestall farms. Note the similarity of resource use and management performance between the large conventional and small freestall farms.

Farm business charts have been computed for each of the four housing and herd size categories. References to DFBS output page numbers of participating dairy farmers are provided in the table headings. From these charts on pages 27-30, the range in size of business, rates of production, labor efficiency, value and cost of producing milk, and profitability can be observed. The range in every category of business performance is tremendous.

By comparing the farm's performance on the most appropriate business chart, a farm manager will be better able to evaluate his or her business performance. Farm managers should remember, however, that their competition is not limited to the other farms in their own barn type and herd size category. They should observe how their management performance compares with farms in other categories as well.

### Herd Size Comparisons

A detailed comparison of profitability, financial situation, and business analysis factors across herd sizes is contained on pages 42-49 of the 1991 State Summary.\* As herd size increases, the average profitability generally increases (pages 42-43). Net farm income without appreciation was \$136,656 per farm for the 300 or more herd size group and \$2,303 per farm for those with less than 40 cows. This relationship generally holds for all measures of profitability including rate of return on capital.

Farm net worth increases rapidly as herd size increases (pages 44-47), even though percent equity was higher on the smaller farms. The moderate size herd groups demonstrated the strongest ability to make debt payments.

Crop yields showed little relationship to herd size, but fertilizer and lime expenses, and machinery cost per tillable acre generally increased as herd size increased (pages 48-49). Milk sold per cow increased as herd size increased, ranging from 16,211 pounds on the farms with less than 40 cows to 19,134 pounds on farms with 300 or more cows. Farm capital per worker increased, and farm capital per cow decreased as herd size increased. Milk sold per worker increased dramatically as herd size increased, ranging from 328,553 pounds at the lowest herd size category up to 864,343 pounds at the largest size category.

## IDENTIFY AND SET GOALS

If businesses are to be successful, they must have direction. Written goals help provide businesses with an identifiable direction over both the long and the short term. Goal setting is as important on a dairy farm as it is in other businesses. Written goals are a tool which farm operators can use to ensure that the business continues to move in the proper direction. Goals should be SMART:

1. Goals should be Specific.
2. Goals should be Measurable.
3. Goals should be Achievable but challenging.
4. Goals should be Rewarding.
5. You should designate a Time when each goal will be achieved.

Goal setting on a dairy farm does not have to be a complex process. In many cases it provides a process for writing down and agreeing on goals that you have already given some thought to. It is also important to remember that once you write out your goals they are not cast in concrete. If a change takes place which has a major impact on the farm business, the goals should be reworked to accommodate that change. Refer to your goals as often as necessary to keep the farm business progressing.

It is important to identify both objectives (long-range) and goals (short-range) when looking at the future of your farm business.

A suggested format for writing out your goals is as follows:

- a. Begin with a mission statement which describes why the business exists based on the preferences and values of the owners.
- b. Identify 4-6 objectives.
- c. Identify SMART goals.

## Summarize Your Business Performance

The Farm Business and Financial Analysis Charts on pages 21-24 and 27-30 can be used to help identify strengths and weaknesses of your farm business. Identify three major strengths and three areas of your farm business that need improvement.

Strengths: _____	Need Improvement: _____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

## GLOSSARY AND LOCATION OF COMMON TERMS

Accounts Payable - Open accounts or bills owed to feed and supply firms, cattle dealers, veterinarians and other providers of farm services and supplies.

Accounts Receivable - Outstanding receipts from items sold or sales proceeds not yet received such as the payment for December milk sales received in January.

Accrual Expenses - (defined on page 3)

Accrual Receipts - (defined on page 4)

Annual Cash Flow Statement - (defined on page 11)

Appreciation - (defined on page 5)

Asset Turnover Ratio - The ratio of total farm income to total farm assets, calculated by dividing total accrual operating receipts plus appreciation by average total farm assets.

Balance Sheet - A "snapshot" of the business financial position at a given point in time, usually December 31. The balance sheet equates the value of assets to liabilities plus net worth.

Capital Efficiency - The amount of capital invested per production unit. Relatively high investments per worker with low to moderate investments per cow imply efficient use of capital.

Cash From Nonfarm Capital Used in the Business - Transfers of money from nonfarm savings or investments to the farm business where it is used to pay operating expenses, make debt payments and/or capital purchases.

Cash Flow Coverage Ratio - (defined on page 13)

Cash Paid - (defined on page 2)

Cash Receipts - (defined on page 4)

Change in Accounts Payable - (defined on page 3)

Change in Accounts Receivable - (defined on page 4)

Change in Inventory - (defined on page 2)

Dairy (farm) - A farm business where dairy farming is the primary enterprise, operating and managing this farm is a full-time occupation for one or more people and cropland is owned.

Dairy Cash-Crop (farm) - Operating and managing this farm is the full-time occupation of one or more people, cropland is owned but crop sales exceed 10 percent of accrual milk receipts.

Debt Per Cow - Total end-of-year debt divided by end-of-year number of cows.

Debt to Asset Ratios - (defined on page 9)

**Dry Matter** - The amount or proportion of dry material that remains after all water is removed. Commonly used to measure dry matter percent and tons of dry matter in feed.

**Equity Capital** - The farm operator/manager's owned capital or farm net worth.

**Expansion Livestock** - Purchased dairy cattle and other livestock that cause an increase in herd size from the beginning to the end of the year.

**Farm Debt Payments as Percent of Milk Sales** - Amount of milk income committed to debt repayment, calculated by dividing planned debt payments by total milk receipts. A reliable measure of repayment ability, see page 13.

**Farm Debt Payments Per Cow** - Planned or scheduled debt payments per cow represent the repayment plan scheduled at the beginning of the year divided by the average number of cows for the year. This measure of repayment ability is used in the Financial Analysis Chart.

**Financial Lease** - A long-term non-cancellable contract giving the lessee use of an asset in exchange for a series of lease payments. The term of a financial lease usually covers a major portion of the economic life of the asset. The lease is a substitute for purchase. The lessor retains ownership of the asset.

**Income Statement** - A complete and accurate account of farm business receipts and expenses used to measure profitability over a period of time such as one year or one month.

**Labor and Management Income** - (defined on page 6)

**Labor and Management Income Per Operator** - The return to the owner/manager's labor and management per full-time operator.

**Labor Efficiency** - Production capacity and output per worker.

**Liquidity** - Ability of business to generate cash to make debt payments or to convert assets to cash.

**Net Farm Income** - (defined on page 5)

**Net Worth** - The value of assets less liabilities equal net worth. It is the equity the owner has in owned assets.

**Operating Costs of Producing Milk** - (defined on page 18)

**Opportunity Cost** - The cost or charge made for using a resource based on its value in its most likely alternative use. The opportunity cost of a farmer's labor and management is the value he/she would receive if employed in his/her most qualified alternative position.

**Other Livestock Expenses** - All other dairy herd and livestock expenses not included in more specific categories. Other livestock expenses include; bedding, DHIC, milk house and parlor supplies, livestock board, registration fees and transfers.

**Part-Time Cash-Crop Dairy (farm)** - Operating and managing this farm is not a full-time occupation, crop sales exceed 10 percent of accrual milk receipts and cropland is owned.

Part-Time Dairy (farm) - Dairy farming is the primary enterprise, cropland is owned but operating and managing this farm is not a full-time occupation for one or more people.

Personal Withdrawals and Family Expenditures Including Nonfarm Debt Payments - All the money removed from the farm business for personal or nonfarm use including family living expenses, health and life insurance, income taxes, nonfarm debt payments, and investments.

Profitability - The return or net income the owner/manager receives for using one or more of his or her resources in the farm business. True "economic profit" is what remains after deducting all costs including the opportunity costs of the owner/manager's labor, management, and equity capital.

Repayment Analysis - An evaluation of the business' ability to make planned debt payments.

Replacement Livestock - Dairy cattle and other livestock purchased to replace those that were culled or sold from the herd during the year.

Return on Equity Capital - (defined on page 7)

Return on Total Capital - (defined on page 7)

Return to Operators' Labor, Management, and Equity Capital - (defined on page 6)

Solvency - The extent or ability of assets to cover or pay liabilities. Debt/asset and leverage ratios are common measures of solvency.

Total Costs of Producing Milk - (defined on page 18)

Whole Farm Method - A procedure used to calculate costs of producing milk on dairy farms without using enterprise cost accounts. All non-milk receipts are assigned a cost equal to their sale value and deducted from total farm expenses to determine the costs of producing milk.
