#### 2006 DAIRY FARM BUSINESS SUMMARY NORTHERN NEW YORK REGION\*

#### INTRODUCTION

Dairy farm managers throughout New York State have been participating in Cornell Cooperative Extension's farm business summary and analysis program since the early 1950's. Managers of each participating farm business receive a comprehensive summary and analysis of their farm business. The information in this report represents averages of the data submitted from dairy farms in the Northern New York Region for 2006.

#### **Program Objective**

The primary objective of the dairy farm business summary, DFBS, is to help farm managers improve the business and financial management of their business through appropriate use of historical data and the application of modern farm business analysis techniques. This information can also be used to establish goals that enable the business to better fulfill its mission. In short, DFBS provides business and financial information needed in identifying and evaluating strengths and weaknesses of the farm business.

#### **Format Features**

This regional report follows the same general format as the 2006 DFBS individual farm report received by participating dairy farmers. The analysis tables have an open column or section labeled My Farm. It may be used by any dairy farm manager who wants to compare his or her business with the average data of this region. The individual farm data, the regional averages and other data can then be used to establish goals for the business. Non-DFBS participants can download a DFBS Data Check-In Form at <a href="http://dfbs.cornell.edu">http://dfbs.cornell.edu</a>. After collecting the data on the form, it can be entered in the U. S. Top Dairies business summary program at the same web site to obtain a summary of their business.

This report features:

- (1) an <u>income statement</u> including accrual adjustments for farm business expenses and receipts, as well as measures of profitability with and without appreciation,
- (2) a complete <u>balance sheet</u> with analytical ratios;
- (3) a <u>statement of owner equity</u> which shows the sources of the change in owner equity during the year;
- (4) a cash flow statement and debt repayment ability analysis;
- (5) an analysis of crop acreage, yields, and expenses;
- (6) an analysis of <u>dairy livestock numbers</u>, <u>production</u>, <u>and expenses</u>;
- (7) a capital and labor efficiency analysis; and
- (8) <u>progress of the farm business</u> over the past two years.

\*This report was written by Wayne A. Knoblauch, Department of Applied Economics and Management, College of Agriculture and Life Sciences, Cornell University, in cooperation with Cooperative Extension Educators Peggy Murray, Frans Vokey, Molly Ames, Anita Deming, Jessica Prosper, and Bill Van Loo; and Jason Karszes, Senior Extension Associate, PRO-DAIRY. Linda Putnam was in charge of data preparation. Loree McOwen prepared the publication. The Northern New York Region of New York State, with the number of participating farms in parentheses, is comprised of Clinton (3), Essex (3), Franklin (4), Jefferson (8), Lewis (13), and St. Lawrence (9) Counties in New York.

#### SUMMARY AND ANALYSIS OF THE FARM BUSINESS

#### **Business Characteristics**

Planning optimal management strategies is a crucial component of operating a successful farm. Various combinations of farm resources, enterprises, business arrangements, and management techniques are used by the dairy farmers in this region. The following table shows important farm business characteristics and the number of farms with each characteristic.

#### BUSINESS CHARACTERISTICS

40 Northern New York Region Dairy Farms, 2006

Type of Farm	Number	Milking System	Number
Dairy	38	Bucket & carry	0
Part-time dairy	0	Dumping station	0
Dairy cash-crop	2	Pipeline	16
-		Herringbone conventional exit	7
Certified organic milk producer	0	Herringbone rapid exit	2
Rotational grazing farm	6	Parallel	13
		Parabone	0
Type of Ownership	Number	Rotary	0
Owner	36	Other	2
Renter	4		
		Production Records	Number
Type of Business	Number	Testing Service	27
Sole Proprietorship	21	On Farm System	6
Partnership	8	Other	0
Limited Liability Corporation	10	None	7
Subchapter S Corporation	1		
Subchapter C Corporation	0	bST Usage	Number
		Used consistently	17
Type of Barn	Number	Used inconsistently	2
Stanchion or Tie-Stall	12	Started using in 2006	0
Freestall	24	Stopped using in 2006	0
Combination	4	Not used in 2006	21
		Average percent usage, if used	50%
Milking Frequency	Number		
2 times per day	24	Business Record System	Number
3 times per day	15	Account Book	8
Other	1	Accounting Service	2
		On-farm computer	29
Breed of Herd	Percent	Other	1
Holstein	95		
Jersey	3		
Other	2		

The averages used in this report were compiled using data from all the participating dairy farms in this region unless noted otherwise. There are full-time dairy farms, part-time farms, dairy cash-crop farms, farms with confined herds, farms with grazing herds, farm renters, partnerships, and corporations included in the average. Average data for these specific types of farms are presented in the State Business Summary.

#### **Income Statement**

In order for an income statement to accurately measure farm income, it must include cash transactions and accrual adjustments (changes in accounts payable, accounts receivable, inventories, and prepaid expenses).

<u>Cash paid</u> is the actual cash outlay during the year and does not necessarily represent the cost of goods and services actually used in 2006.

<u>Change in inventory</u>: Increases in inventories of supplies and other purchased inputs are subtracted in computing accrual expenses because they represent purchased inputs not actually used during the year. Decreases in purchased inventories are added to expenses because they represent inputs purchased in a prior year and used this year.

#### CASH AND ACCRUAL FARM EXPENSES

40 Northern New York Region Dairy Farms, 2006

Extraordinary expense	0	0	<<	0	0
Machinery depreciation	-	-		-	69,094
Building depreciation					47,186
TOTAL ACCRUAL EXPENSES					\$ 1,216,299

Change in prepaid expenses (noted above by <<) is a net change in non-inventory expenses that have been paid in advance of their use. For example, prepaid lease expense on the beginning of year balance sheet represents last year's payment for use of the asset during this year. End of year prepaid expense represents payments made this year for next year's use of the asset. Adding payments made last year for this year's use of the asset, and subtracting payments made this year for next year's use of the asset is accomplished by subtracting the difference.

<u>Change in accounts payable</u>: An increase in accounts payable from beginning to end of year is added when calculating accrual expenses because these expenses were incurred (resources used) in 2006 but not paid for. A decrease is subtracted because it represents payment for resources used before 2006.

<u>Accrual expenses</u> are an estimate of the costs of inputs, except operator/family labor and equity capital, actually used in this year's production. They are the cash paid, less changes in inventory and prepaid expenses, plus accounts payable.

#### CASH AND ACCRUAL FARM RECEIPTS

40 Northern New York Region Dairy Farms, 2006

Receipt Item	Cash Receipts	+	Change in Inventory	+	A	Change in Accounts eceivable	=	Accrual Receipts
•	•							•
Milk sales	\$ 1,046,384				\$	2,696		\$1,049,080
Dairy cattle	51,092		\$ 55,243			-151		106,183
Dairy calves	14,857		3,576			-94		18,339
Other livestock	3,580		-1,125			0		2,455

Custom machine work	5,481					-94		5,387
Gas tax refund	51					0		51
Other	14,816					102		14,918
Less nonfarm noncash capital**	<del></del>	(-)	0 **				(-)	0
Total Receipts	\$ 1,192,209	( )	\$ 71,085		\$	1,244	( )	\$ 1,264,537

<sup>\*</sup>Change in advanced government receipts.

<u>Cash receipts</u> include the gross value of milk checks received during the year plus all other payments received from the sale of farm products, services, and government programs. Nonfarm income is not included in calculating farm profitability.

<u>Changes in inventory</u> of assets produced by the business are calculated by subtracting beginning of year values from end of year values <u>excluding appreciation</u>. Increases in livestock inventory caused by herd growth and/or quality are added, and decreases caused by herd reduction and/or quality are subtracted. Changes in inventories of crops grown are also included. An increase in advanced government receipts is subtracted from cash income because it represents income received in 2006 for the 2007 crop year in excess of funds earned for 2006. Likewise, a decrease is added to cash government receipts because it represents funds earned for 2006 but received in 2005.

<u>Changes in accounts receivable</u> are calculated by subtracting beginning year balances from end year balances. Payments in January 2007 for milk produced in December 2006 compared to January 2006 payments for milk produced in 2005 are included as a change in accounts receivable in determining accrual milk sales.

<u>Accrual receipts</u> represent the value of all farm commodities produced and services actually generated by the farm business during the year.

#### **Profitability Analysis**

Farm operators\* contribute labor, management, and equity capital to their businesses and the combination of these resources, and the other resources used in the business, determines profitability. Farm profitability can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

The return to any individual resource must be viewed as an estimate because the cost of other family resources must be approximated to calculate returns to the selected resource. For example, the costs of operator and family labor and management must be approximated to calculate the returns to equity capital.

<sup>\*\*</sup>Gifts or inheritances of cattle or crops included in inventory.

<sup>\*</sup> Operators are the individuals who are integrally involved in the operation and management of the farm business. They are not limited to those who are the owner of a sole proprietorship or are formally a member of the partnership or corporation.

<u>Net farm income</u> is the return to the farm operators and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, and financing the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed both with and without appreciation. Appreciation represents the change in values caused by annual changes in prices of livestock, machinery, real estate inventory, and stocks and certificates (other than Farm Credit stock required for loan borrowings). Appreciation is a major factor contributing to changes in farm net worth and must be included for a complete profitability analysis.

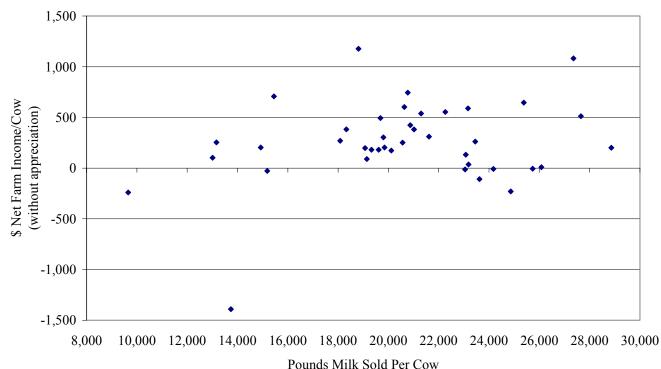

**NET FARM INCOME**40 Northern New York Region Dairy Farms, 2006

	Av	erage	$\underline{\mathbf{N}}$	<u>ly Farm</u>
Item	Total	Per Cow	Total	Per Cow
Total accrual receipts	\$1,264,537		\$	
Appreciation: Livestock	9,120			
Machinery	25,359			
Real Estate	92,304			
Other Stock & Certificates	4,405			
Total Including Appreciation	\$1,395,725		\$	
Total accrual expenses	1,216,299		-	
Net Farm Income (with appreciation)	\$ 179,426	\$ 537	\$	\$
Net Farm Income (without appreciation)	\$ 48,238	\$ 144	\$	\$

The chart below shows the relationship between net farm income per cow (without appreciation) and pounds of milk sold per cow. Higher net farm incomes can be achieved across a range of production levels as a result of different management systems, such as grazing, being utilized by the participating dairies.

#### NET FARM INCOME PER COW AND MILK PER COW

40 Northern New York Region Dairy Farms, 2006

<u>Labor and management income</u> is the return which farm operators receive for their labor and management used in the farm business. Appreciation is not included as part of the return to labor and management because it results from ownership of assets rather than management of the farm business. Labor and management income is calculated by deducting a charge for unpaid family labor and the opportunity cost of equity capital, at a real interest rate of five percent, from net farm income excluding appreciation. The interest charge of five percent reflects the long-term average rate of return above inflation that a farmer might expect to earn in comparable risk investments.

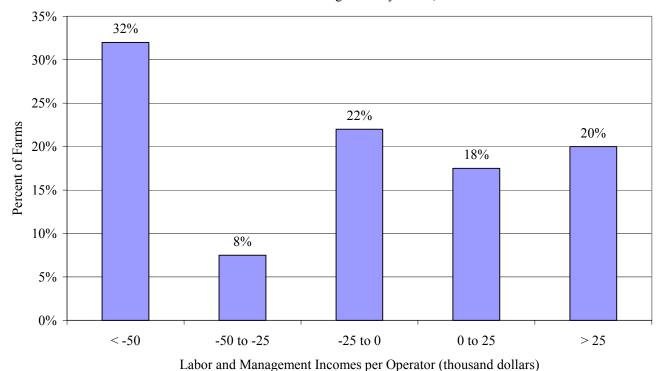

**LABOR AND MANAGEMENT INCOME**40 Northern New York Region Dairy Farms, 2006

Item	Average	My Farm
Net farm income without appreciation	\$ 48,238	\$
Family labor unpaid @ \$2,300 per month	- 5,267	
Interest on \$1,773,212 average equity capital @ 5% real rate	<u>- 88,116</u>	
Labor & Management Income per farm (1.65 Operators/farm)	\$ -45,145	\$
Labor & Management Income per Operator/Manager	\$ -27,360	\$

<u>Labor and management income per operator</u> averaged \$27,360 on these 40 farms in 2006. The range in labor and management income per operator was from about less than \$-200,000 to more than \$78,000. Returns to labor and management were less than \$-25,000 on 40 percent of the farms, between \$-25,000 and \$0 on 22 percent of the farms, while 38 percent showed labor and management incomes per operator greater than \$0.

#### DISTRIBUTION OF LABOR AND MANAGEMENT INCOMES PER OPERATOR

40 Northern New York Region Dairy Farms, 2006

Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost of operators' labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth (market value) or equity capital. Rate of return on total capital is calculated by adding interest paid to the return on equity capital and then dividing by average farm assets (market value). Net farm income from operations ratio is net farm income (without appreciation) divided by total accrual receipts.

#### RETURN ON EQUITY CAPITAL AND RETURN ON TOTAL CAPITAL

40 Northern New York Region Dairy Farms, 2006

Item	Average	My Farm
Net farm income with appreciation	\$ 179,426	\$
Family labor unpaid @\$2,300 per month	- 5,267	
Value of operators' labor & management	<u>- 64,950</u>	
Return on equity capital with appreciation	\$ 109,209	\$
Interest paid	+ 53,842	+
Return on total capital with appreciation	\$ 163,051	\$
Return on equity capital without appreciation	\$ -21,979	\$
Return on total capital without appreciation	\$ 31,863	\$
Rate of return on average equity capital:		
with appreciation	6.2%	
without appreciation	-1.2%	
Rate of return on average total capital:		
with appreciation	6.2%	
without appreciation Net Farm Income from Operations Ratio	1.2% 0.04	%

#### Farm and Family Financial Status

The first step in evaluating the financial position of the farm is to construct a balance sheet which identifies and values all the assets and liabilities of the business. The second step is to evaluate the relationship between assets, liabilities, and net worth and changes that occurred during the year.

<u>Financial lease</u> obligations are included in the balance sheet. The present value of all future payments is listed as a liability since the farmer is committed to make the payments by signing the lease. The present value is also listed as an asset, representing the future value the item has to the business. For 2006, lease payments were discounted by 8.15 percent to obtain their present value.

<u>Advanced government receipts</u> are included as current liabilities. Government payments received in 2006 that are for participation in the 2007 program are the end year balance and payments received in 2005 for participation in the 2006 program are the beginning year balance.

<u>Current Portion</u> or principal due in the next year for intermediate and long term debt is included as a current liability.

## 2006 FARM BUSINESS & NONFARM MARKET VALUE BALANCE SHEET

<sup>\*</sup>Assumes that average nonfarm assets and liabilities for the nonreporting farms were the same as for those reporting.

Balance sheet analysis involves examination of relative asset and debt levels for the business. Percent equity is calculated by dividing end of year net worth by end of year assets and multiplying by 100. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect business solvency and the potential capacity to borrow. The leverage ratio is the dollars of debt per dollar of equity, computed by dividing total farm liabilities by farm net worth. Debt levels per productive unit represent old standards that are still useful if used with measures of cash flow and repayment ability. A current ratio of less than 1.5 or that has been falling warrants additional evaluation. The amount of working capital that is adequate must be related to the size of the farm business.

<u>Farm inventory balance</u> is an accounting of the value of assets used on the balance sheet and the changes that occur from the beginning to end of year. Changes in the livestock inventory are included in the dairy analysis. Net investment indicates whether the capital stock is being expanded (positive) or depleted (negative).

**FARM INVENTORY BALANCE** 40 Northern New York Region Dairy Farms, 2006

Item	Average of Region's Farms						
	Real Estate	Machinery & Equipment					
Value beginning of year	\$ 965,331	\$ 465,424

Value end of year	\$ 1,105,982	\$ 496,297					

<sup>\*\$17,756</sup> land and \$137,934 buildings and/or depreciable improvements.

The Statement of Owner Equity has two purposes. It allows (1) verification that the accrual income statement and market value balance sheet are consistent (in accountants terms, they reconcile) and (2) identification of the causes of change in equity that occurred on the farm during the year. The Statement of Owner Equity allows you to determine to what degree the change in equity was caused by (1) earnings from the business, and nonfarm income, in excess of withdrawals being retained in the business (called retained earnings), (2) outside capital being invested in the business or farm capital being removed from the business (called contributed/withdrawn capital), (3) increases or decreases in the value (price) of assets owned by the business (called change in valuation equity), and (4) the error in the business cash flow accounting.

Retained earnings is an excellent indicator of farm generated financial progress.

#### **Cash Flow Statement**

Completing an annual cash flow statement is an important step in understanding the sources and uses of funds for the business. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The <u>annual cash flow statement</u> is structured to show net cash provided by operating activities, investing activities, financing activities and from reserves. All cash inflows and outflows, including beginning and end balances, are included. Therefore, the sum of net cash provided from all four activities should be zero. Any imbalance is the error from incorrect accounting of cash inflows/outflows.

**ANNUAL CASH FLOW STATEMENT**40 Northern New York Region Dairy Farms, 2006

#### **Repayment Analysis**

A valuable use of cash flow analysis is to compare the debt payments planned for the last year with the amount actually paid. The measures listed below provide a number of different perspectives on the repayment performance of the business. However, the critical question to many farmers and lenders is whether planned payments can be made in 2007. The cash flow projection worksheet on the next page can be used to estimate repayment ability, which can then be compared to planned 2007 debt payments shown below.

**FARM DEBT PAYMENTS PLANNED**Same 33 Northern New York Region Dairy Farms, 2005 & 2006

			A	verage			My Farn		
		2006 Payments		nts	Planned	200	Planned

The <u>cash flow coverage ratio</u> and <u>debt coverage ratio</u> measure the ability of the farm business to meet its planned debt payment schedule. The ratios show the percentage of payments planned for 2006 (as of December 31, 2005) that could have been made with the amount available for debt service in 2006. Farmers who did not participate in DFBS in 2005 have their 2006 ratios based on planned debt payments for 2007.

COVERAGE RATIOS
Same 33 Northern New York Region Dairy Farms, 2005 & 2006

Item	Average	Item	Average
Cash Flow Coverage Ratio		Debt Coverage Ratio	
Cash farm receipts	\$1,396,230	Net farm income (w/o appreciation)	\$ 53,127

#### **Cropping Analysis**

The cropping program is an important part of the dairy farm business and often represents opportunities for improved productivity and profitability. A complete evaluation of what the available land resources are, how they are being used, the level of crop yields, and what it costs to produce crops is important in evaluating alternative cropping and feed purchasing alternatives.

#### LAND RESOURCES AND CROP PRODUCTION

40 Northern New York Region Dairy Farms, 2006

Item		Average			My Farm	
Land Tillable Nontillable Other nontillable Total	Owned 460 48 214 722	Rented 343 14 5 362	Total 803 62 219 1,084	Owned	Rented	<u>Total</u>

Other crops Tillable pasture Idle Total Tillable Acres	7 9 7 40	261 41 40 803				

<sup>\*</sup>This column represents the average acreage for the farms producing that crop. Average acreages including those farms not producing were hay crop 426, corn silage 261, corn grain 48, oats 4, tillable pasture 9, and idle 7.

Average crop acres and yields compiled for the region are for the farms reporting each crop. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent based on dry matter information provided.

The following crop/dairy ratios indicate the relationship between forage production, forage production resources, and the dairy herd.

#### CROP/DAIRY RATIOS

38 Northern New York Region Dairy Farms, 2006

Item	Average*	My Farm
Total tillable acres per cow	2.43	
Total forage acres per cow	2.08	
Harvested forage dry matter, tons per cow	9.36	

<sup>\*</sup>Excludes farms that do not harvest forages.

#### **Cropping Analysis** (continued)

A number of cooperators have allocated crop expenses among the hay crop, corn, and other crops produced. Fertilizer and lime, seeds and plants, and spray and other crop expenses have been computed per acre and per production unit for hay and corn. Additional expense items such as fuels, labor, and machinery repairs are not included. Rotational grazing was used on twenty farms in the region.

<sup>\*</sup>Excludes farms that do not harvest forages.

#### **Dairy Analysis**

Analysis of the dairy enterprise can reveal strengths and weaknesses of the dairy farm business. Information on this page should be used in conjunction with DHI and other dairy production information. Changes in dairy herd size and market values that occur during the year are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and quality. Any change in inventory is included as an accrual farm receipt when calculating all of the profitability measures on pages 6 and 7.

**DAIRY HERD INVENTORY**40 Northern New York Region Dairy Farms, 2006

	D	airy Cows				Heifer		
	•			Bred		Open		Calves

Average number		- -		_ (all age groups)				

Total milk sold and milk sold per cow are extremely valuable measures of size and productivity, respectively, on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year.

# MILK PRODUCTION 40 Northern New York Region Dairy Farms, 2006

Item	Average	My Farm
Total milk sold, lbs.	7,751,848	
Milk sold per cow, lbs.	23,199	
Average milk plant test, percent butterfat	3.58%	

Monitoring and evaluating culling practices and experiences on an annual basis are important herd management tools. Culling rate can have an affect on both milk per cow and profitability.

## ANIMALS LEAVING THE HERD

40 Northern New York Region Dairy Farms, 2006

	Ave	erage	My	Farm
Item	Number	Percent*	Number	Percent*
Cows sold for beef	85	25.4		
Cows sold for dairy	1	0.4		
Cows died	18	5.4		
Culling rate**		30.8		

<sup>\*</sup>Percent of average number of cows in the herd. \*\*Cows sold for beef plus cows died.

The cost of producing milk has been compiled using the whole farm method and is featured in the following table. Accrual receipts from milk sales can be compared with the accrual costs of producing milk per cow and per hundredweight of milk. Using the whole farm method, operating costs of producing milk are estimated by deducting nonmilk accrual receipts from total accrual operating expenses including expansion livestock purchased. Purchased inputs cost of producing milk are the operating costs plus depreciation. Total costs of producing milk include the operating costs of producing milk plus depreciation on machinery and buildings, the value of unpaid family labor, the value of operators' labor and management, and the interest charge for using equity capital.

## ACCRUAL RECEIPTS FROM DAIRY, COSTS OF PRODUCING MILK, AND PROFITABILITY

#### **Capital and Labor Efficiency Analysis**

Capital efficiency factors measure how effectively the capital is being used in the farm business. Measures of labor efficiency are key indicators of management's success in generating products per unit of labor input. When evaluating a business, the relationship between capital efficiency and labor efficiency should be explored. For example, if capital efficiency shows high capital investment per worker or per cow, labor efficiency should be high reflecting use of capital to make labor more effective. However, if capital investment is high per worker or per cow, and labor efficiency is low, a problem may exist on that farm.

**CAPITAL EFFICIENCY**40 Northern New York Region Dairy Farms, 2006

Small conventional stall operations of 60 or less cows should strive for labor efficiency of 600,000 or more pounds of milk sold per worker. Large conventional stall operations should strive for 850,000 or more pounds of milk sold per worker. Small free stall operations of less than 300 cows should strive for 1,000,000 pounds of milk sold per worker and large free stall operations with more than 300 cows should strive for over 1,200,000 pounds of milk sold per worker.

Labor costs and machinery costs should also be evaluated both individually and jointly. The more machinery or technology at a worker's disposal, the less time, and therefore cost, that should be required to get work accomplished. Striving for labor and machinery costs per cow of less than \$1,000 on small conventional stall barns, less than \$900 on large conventional stall barns, less than \$850 on small free stall barns and below \$750 on large free stall barns should be a goal.

#### COMPARATIVE ANALYSIS OF THE FARM BUSINESS

#### **Progress of the Farm Business**

Comparing your business with average data from regional DFBS cooperators that participated in both of the last two years can be helpful to establishing your goals for these parameters. It is equally important for you to determine the progress your business has made over the past two or three years, to compare this progress to your goals, and to set goals for the future.

#### **Regional Farm Business Chart**

The Farm Business Chart is a tool which can be used in analyzing your business. Compare your business by drawing a line through or near the figure in each column which represents your current level of performance. The five figures in each column represent the average of each 20 percent or quintile of farms included in the regional summary. Use this information to identify business areas where more challenging goals are needed.

#### **Supplementary Information**

Each year DFBS cooperators volunteer to complete supplementary data collection forms looking at selected management aspects of the business or specific research areas being studied. This is in addition to the normal DFBS data collection form. An area that was examined this year was the source of dairy replacements. Following is a summary of this information.

#### SOURCE OF DAIRY REPLACEMENTS

56 New York Dairy Farms, 2006

Animals Entering Herd	Average
Number calving in 2006 for first time Animals purchased, % <sup>1</sup> Animals raised by farm, % <sup>2</sup>	146 5% 95%
Current Heifer Inventory	
Raised on dairy, % Raised by a custom grower, %	86% 14%

<sup>&</sup>lt;sup>1</sup> Animals purchased are animals purchased from a different farm and were not the farm's genetics.

On the average farm, 146 animals calved for the first time in 2006. The breakdown on these animals for source was 5 percent purchased and 95 percent raised by the farm. Of the current heifer inventory, 86 percent were raised on the dairy and 14 percent were being raised by a custom grower. There is increased interest in evaluating the dairy replacement enterprise.

#### Milk Income and Marketing Expense Breakdown

Starting January 1<sup>st</sup>, 2000, the northeast switched to multiple components pricing, which changed the format of the milk check and how farmers received payment for their milk. To examine the breakdown of the gross milk income and the marketing expenses, 28 Northern New York farms provided data for all the different sources of income for milk sales and the milk marketing expenses on an accrual basis. This information is reported in the following two tables. The tables are divided into six different areas, each representing a different area of income or expenses.

The first section looks at the value of the milk components on a per cwt. basis. The second area looks at the Producer Price Differential. The third area looks at the premiums a farm receives. Any premiums not specifically noted as quality or volume related are included in market premiums. The fourth area looks at the expenses associated with marketing milk. A new line item in this section is the expenses associated with utilizing forward contracting or hedging programs to market milk, such as commission or broker fees. The fifth area is income from the compact program or from forward contracting or hedging programs. The sixth area is the patronage dividends or refunds from the milk cooperatives. Equity purchased in the milk cooperative utilizing a monthly deduction from the milk check or a percent of the patronage dividend is treated as a capital purchase and is not a milk marketing expense. The cumulative total for these six areas is the net price received on farms. Your net farm price can be found on page 12 of your farm's DFBS report.

The table on page 25 reports the averages for these different areas. The table on page 26 contains the range for each of the individual lines of the report. This table is in farm business chart format with each item sorted independently and ranked by fifths. Numbers for the different areas will not add to the totals for that quintile or to the net price received because the highest farms for each item were averaged, not the same farms throughout the six areas. This table shows the range of income and expenses received by farms for all the different areas.

For your individual farm, compare your accrual numbers following this same format to look at how you compare to other farms in your region and to identify possible areas to generate additional revenue.

<sup>&</sup>lt;sup>2</sup> Animals raised by farm are animals that were born on the farm and entered the herd, which includes animals raised by the farm or custom grower.

#### **New York State Farm Business Charts**

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 225 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would <u>not</u> necessarily be the same farms which make up the top 10 percent for any other factor.

The cost control factors are ranked from low to high, but the <u>lowest cost is not necessarily the most profitable</u>. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

Farm Business Charts for farms with freestall barns and 150 cows or less, 151-300 cows, and more than 300 cows; and farms with conventional barns with 60 cows or less and more than 60 cows are shown on pages 32-36.

#### **Financial Analysis Chart**

The farm financial analysis chart on page 29 is designed just like the Farm Business Chart and may be used to assess the financial health of the farm business. Most of the financial measures used in the chart are defined on pages 6, 9, 13 and 19 of this publication. References to DFBS output page numbers for participating dairy farmers are provided in the table headings.

<sup>\*\*</sup>Dollars of debt per dollar of equity, computed by dividing total liabilities by total equity.

<sup>\*\*\*</sup>Return on all farm capital (no deduction for interest paid) divided by total farm assets

#### Comparison by Type of Barn and Herd Size

When analyzing a dairy farm business by comparing it to a group of farms, it is important that the group of farms have used as many of the same physical characteristics as possible as the farm being analyzed. To assist in this endeavor, dairy farms in the summary have been divided into those with freestall and those with conventional housing. Conventional housing includes stanchion and tiestall barns. Within each group, is a further classification by size of the dairy herd.

The table on page 31 includes the average values for the resulting five groups of dairy farms. The average size of farms in the five groups ranges from 44 cows on the small conventional farms to 712 cows on the largest freestall farms.

The largest freestall farms averaged the highest milk output per cow and per worker, the lowest total cost of production and investment per cow, and the greatest returns to labor, management and capital.

Farm business charts have been computed for each of the five housing and herd size categories and are on pages 32-36. By comparing the farm's performance on the most appropriate business chart, a farm manager will be better able to evaluate his or her business performance.

#### **Herd Size Comparisons**

A detailed comparison of profitability, financial situation and business analysis factors across herd sizes is contained on pages 48-60 of the 2005 State Summary\*. As herd size increases, the net farm income profitability increases (page 48)\*. Net farm income without appreciation averaged \$23,042 per farm for the less than 50 cow farms and \$566,457 per farm for those with more than 600 cows. Return to all capital without appreciation and labor and management income per operator generally increased as herd size increased.

Assets, liabilities and financial measures are presented on pages 55-58\*. All herd size categories saw an increase in net worth during 2005. The largest herd size category experienced an increase in net worth of over \$715,000. However, percent equity went down as assets increased. The largest herds had the lowest percent equity; while the smaller herds averaged 78 percent.

Crop yields showed little relationship to herd size, but fertilizer and lime expenses, and machinery cost per tillable acre generally increased as herd size increased (pages 59-60)\*. The farms with 600 and more cows per farm averaged 35 percent more milk sold per cow than the smallest farms. All of the groups with 200 or more cows averaged above 20,000 pounds of milk sold per cow while the farms smaller than 200 cows averaged 18,663 pounds of milk sold per cow. Farm capital per worker increased, and farm capital per cow decreased as herd size increased. Milk sold per worker increased dramatically as herd size increased, ranging from 384,002 pounds at the lowest herd size category up to 1,135,991 pounds at the largest size category.

#### **IDENTIFY AND SET GOALS**

If businesses are to be successful, they must have direction. Written goals help provide businesses with an identifiable direction over both the long and short term. Goal setting is as important on a dairy farm as it is in other businesses. Written goals are a tool which farm operators can use to ensure that the business continues to move in the desired direction. Goals should be SMART:

- 1. Goals should be **Specific**.
- Goals should be <u>Measurable</u>.
- 3. Goals should be Achievable but challenging.
- 4. Goals should be **Rewarding**.
- 5. Goals should be <u>Timed</u> with a designated date by which the goal will be achieved.

Goal setting on a dairy farm should be a process for writing down and agreeing on goals that you have already given some thought to. It is also important to remember that once you write out your goals they are not cast in concrete. If a change takes place which has a major impact on the farm business, the goals should be reworked to accommodate that change. Refer to your goals as often as necessary to keep the farm business progressing.

It is important to identify both objectives (long-range) and goals (short-range) when looking at the future of your farm business.

A suggested format for writing out your goals is as follows:

- a. Begin with a mission statement which describes why the business exists based on the preferences and values of the owners.
- b. Identify 4-6 objectives.
- c. Identify SMART goals.

#### GLOSSARY AND LOCATION OF COMMON TERMS

<u>Accounts Payable</u> - Open accounts or bills owed to feed and supply firms, cattle dealers, veterinarians and other providers of farm services and supplies.

<u>Accounts Receivable</u> - Outstanding receipts from items sold or sales proceeds not yet received, such as the payment for December milk sales received in January.

**Accrual Expenses** - (defined on page 3)

Accrual Receipts - (defined on page 4)

**Annual Cash Flow Statement** - (defined on page 11)

**Appreciation** - (defined on page 5)

<u>Asset Turnover Ratio</u> - The ratio of total farm income to total farm assets, calculated by dividing total accrual operating receipts plus appreciation by average total farm assets.

**Balance Sheet** - A "snapshot" of the business financial position at a given point in time, usually December 31. The balance sheet equates the value of assets to liabilities plus net worth.

**<u>bST Usage</u>** - An estimate of the percentage of herd, on average, that was supplemented with bovine somatotropin during the year.

<u>Capital Efficiency</u> - The amount of capital invested per production unit. Relatively high investments per worker with low to moderate investments per cow imply efficient use of capital.

<u>Cash From Nonfarm Capital Used in the Business</u> - Transfers of money from nonfarm savings or investments to the farm business where it is used to pay operating expenses, make debt payments and/or capital purchases.

Cash Flow Coverage Ratio - (defined on page 13)

<u>Cash Paid</u> - (defined on page 2)

**Cash Receipts** - (defined on page 4)

Change in Accounts Payable - (defined on page 3)

<u>Change in Accounts Receivable</u> - (defined on page 4)

<u>Change in Inventory</u> - (defined on page 2)

<u>Cost of Term Debt</u> - A weighted average of the cost of borrowed capital to the farm. Calculate by multiplying end of year principal of each loan that is borrowed by the interest rate for each loan at that time. Add up each amount that is calculated for each loan and then divide by total amount of borrowed funds. Do not include accounts payable, operating debt or advanced government receipts. This information is found on pages 8 & 9 of the data entry form.

<u>Culling Rate</u> - (defined on page 17)

**Current Portion** - (defined on page 7)

<u>Current Ratio</u> – Measures the extent to which current farm assets, if liquidated, would cover current farm liabilities. Calculated as current farm assets at end year divided by current farm liabilities at end year.

<u>Dairy (farm)</u> - A farm business where dairy farming is the primary enterprise, operating and managing this farm is a full-time occupation for one or more people and cropland is owned.

<u>Dairy Cash-Crop (farm)</u> - Operating and managing this farm is the full-time occupation of one or more people, cropland is owned but crop sales exceed 10 percent of accrual milk receipts.

<u>Debt Coverage Ratio</u> – (defined on page 13)

**<u>Debt Per Cow</u>** - Total end-of-year debt divided by end-of-year number of cows.

**Debt to Asset Ratios** - (defined on page 9)

**<u>Depreciation Expense Ratio.</u>** – Machinery and building depreciation divided by total accrual receipts.

<u>Dry Matter</u> - The amount or proportion of dry material that remains after all water is removed. Commonly used to measure dry matter percent and tons of dry matter in feed.

**Equity Capital** - The farm operator/manager's owned capital or farm net worth.

**Expansion Livestock** - Purchased dairy cattle and other livestock that cause an increase in herd size from the beginning to the end of the year.

<u>Farm Debt Payments as Percent of Milk Sales</u> - Amount of milk income committed to debt repayment, calculated by dividing planned debt payments by total milk receipts. A reliable measure of repayment ability, see page 14.

<u>Farm Debt Payments Per Cow</u> - Planned or scheduled debt payments per cow represent the repayment plan scheduled at the beginning of the year divided by the average number of cows for the year. This measure of repayment ability is used in the Financial Analysis Chart.

<u>Financial Lease</u> - A long-term non-cancelable contract giving the lessee use of an asset in exchange for a series of lease payments. The term of a financial lease usually covers a major portion of the economic life of the asset. The lease is a substitute for purchase. The lessor retains ownership of the asset.

<u>Hired Labor Expense per Hired Worker Equivalent</u> – The total cost to the farm per hired worker equivalent. Divide accrual hired labor expense by number of hired plus family paid worker equivalents.

<u>Hired Labor Expense as % of Milk Sales</u> – The percentage of the gross milk receipts that is used for labor expense. Divide accrual hired labor expense by accrual milk sales.

<u>Income Statement</u> - A complete and accurate account of farm business receipts and expenses used to measure profitability over a period of time such as one year or one month.

<u>Interest Expense Ratio</u> – Accrual interest expense divided by total accrual receipts.

<u>Labor and Management Income</u> - (defined on page 6)

<u>Labor and Management Income Per Operator</u> - The return to the owner/manager's labor and management per full-time operator.

<u>Labor Efficiency</u> - Production capacity and output per worker.

**Leverage Ratio** - (defined on page 9)

<u>Liquidity</u> - Ability of business to generate cash to make debt payments or to convert assets to cash.

Net Farm Income - (defined on page 5)

Net Farm Income from Operations Ratio - (defined on page 7)

<u>Net Milk Receipts</u> – Accrual milk receipts less milk marketing expense.

**Net Worth** - The value of assets less liabilities equal net worth. It is the equity the owner has in owned assets.

Operating Costs of Producing Milk - (defined on page 18)

<u>Operating Expense Ratio</u> – Total accrual expenses less interest and machinery and building depreciation, divided by total accrual receipts.

<u>Opportunity Costs</u> - The cost or charge made for using a resource based on its value in its most likely alternative use. The opportunity cost of a farmer's labor and management is the value he/she would receive if employed in his/her most qualified alternative position.

<u>Other Livestock Expenses</u> - All other dairy herd and livestock expenses not included in more specific categories. Other livestock expenses include; bST, DHIC, registration fees and transfers.

<u>Part-Time Dairy (farm)</u> - Dairy farming is the primary enterprise, cropland is owned but operating and managing this farm is not a full-time occupation for one or more people.

<u>Personal Withdrawals and Family Expenditures Including Nonfarm Debt Payments</u> - All the money removed from the farm business for personal or nonfarm use including family living expenses, health and life insurance, income taxes, nonfarm debt payments, and investments.

<u>Profitability</u> - The return or net income the owner/manager receives for using one or more of his or her resources in the farm business. True "economic profit" is what remains after deducting all the costs including the opportunity costs of the owner/manager's labor, management, and equity capital.

Purchased Inputs Cost of Producing Milk - (defined on page 18)

Renter - Farm business owner/operator owns no tillable land and commonly rents all other farm real estate.

**Repayment Analysis** - An evaluation of the business' ability to make planned debt payments.

<u>Replacement Livestock</u> - Dairy cattle and other livestock purchased to replace those that were culled or sold from the herd during the year.

**Return on Equity Capital** - (defined on page 7)

**Return on Total Capital** - (defined on page 7)

**Solvency** - The extent or ability of assets to cover or pay liabilities. Debt/asset and leverage ratios are common measures of solvency.

Total Costs of Producing Milk - (defined on page 18)

<u>Whole Farm Method</u> - A procedure used to calculate costs of producing milk on dairy farms without using enterprise cost accounts. All non-milk receipts are assigned a cost equal to their sale value and deducted from total farm expenses to determine the costs of producing milk.

<u>Working Capital</u> – A theoretical measure of the amount of funds available to purchase inputs and inventory items after the sale of current farm assets and payment of all current farm liabilities. Calculated as current farm assets at end year less current farm liabilities at end year.
