A Statutory College of the State University
Cornell University, Ithaca, New York 14853-7801

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, age or handicap. The University is committed to the maintenance of affirmative action programs which will assure the continuation of such equality of opportunity.

ABSTRACT

This summary and analysis of 395 New York dairy farm businesses demonstrates the use of up to date methods of cash and accrual accounting to measure cash flow, farm profitability, and financial growth. Traditional methods of analyzing dairy farm businesses are combined with new evaluation techniques to show the relationship between good management performance and financial success. These farms averaged 107 cows per farm and 17,720 pounds of milk sold per cow in 1990, which are above the average size and management level of all New York dairy farms. Net farm income excluding appreciation, which is the return to the operator's labor, management, capital, and other unpaid family labor, averaged $47,020 per farm. The rate of return to all capital with appreciation invested in the farm business averaged 6.0 percent in 1990.

INTRODUCTION

Dairy farm business summary (DFBS) projects are an integral part of Cornell Cooperative Extension's agriculture educational program in New York State. The Department of Agricultural Economics of the New York State College of Agriculture and Life Sciences, and County Extension staff, cooperate in sponsoring DFBS projects. In 1990, about 500 dairy farmers participated. Business records submitted by dairy farmers from 48 counties provide the basis for continuing Extension programs, data for applied studies, and for use in the classroom. Regardless of the use of the data, confidentiality of individual farm data is maintained.

Cooperative Extension agents and specialists enroll the cooperators and collect the records. Each cooperator receives a detailed summary and analysis of his or her business. More than 90 percent of the agents and specialists are using a microcomputer in their offices and/or on the farm to process and return the individual farm business reports for immediate use. Regional reports are prepared by Cornell faculty and used by DFBS cooperators and other farmers to compare their farm with regional averages. The DFBS program helps farmers develop managerial skills and solve business management problems.

Records from the eight regions and 48 counties of the State have been combined and the total data set analyzed as a study of the effects of changes in price, technology, and management on dairy farm incomes (Figure 1, page 2). This study provides current farm business information for use by dairy farmers, Cooperative Extension staff, teachers, and others concerned with the New York dairy industry.

Farms Included

Data from 395 specialized dairy farms are included in the main body of this report. These farms do NOT represent the "average" for all dairy farms in the State. Participation was on a voluntary basis, therefore, not all areas or types of operations were equally represented (Figure 1, page 2). The 395 specialized dairy farms represent a cross section of better than average commercial dairy farm owner-operators in the State. Dairy farm renters, dairy-cash crop farmers with crop sales exceeding 10 percent of milk sales, and part-time dairy operators have been excluded from the main body of this report. Dairy farm renters are summarized separately in the supplemental information section of the publication.

Features

Accrual accounting procedures have been used to provide the most accurate accounting of farm receipts and farm expenses for measuring farm profits. An explanation of these procedures is found on page 6. Four measures of farm profits are calculated on pages 9 through 11. The balance sheet and cash flow statement are featured on pages 12 through 16.

The dairy program analysis includes data on the costs of producing milk (pages 20-24) and separate farm business charts using data from freestall farms versus conventional stall dairy farms (pages 45-48).

GROWTH AND PROGRESS ON NEW YORK DAIRY FARMS

Two hundred and six farmers have participated in the dairy farm business summary for each of the years 1987, 1988, 1989, and 1990 (Table 1). Over this four year period, milk sold per farm increased by 338,000 pounds or 19 percent as average herd size increased by 11 cows or 10 percent, and milk output per cow increased 1,232 pounds or seven percent.

Cow numbers, and milk output per farm and per cow, increased at relatively steady rates during this four year period although milk sold increased faster than herd size. The size of the farm labor force grew 10 percent from 1987 to 1990 with one-third the increase occurring in the last year. Milk sold per worker increased eight percent but grew at a decreasing rate over the four year period.

Crop yields were affected by a variety of climatic conditions during this four year period. The most serious were the 1988 drought and poor planting and harvesting conditions in 1989. Much of the 1988 and 1989 increases in feed and crop expenses can be attributed to below normal production of forage crop quantity and quality.

Feed costs increased dramatically in 1988 and held at that level through 1990 even though the price per ton declined in 1990. Feed and crop expenses per hundredweight of milk sold have increased 26 percent in four years and have exceeded $5 for the first time.

The average operating costs of producing milk increased 23 percent from 1987 to 1990. Total costs per hundredweight increased 17 percent over the four year period. The average price received per hundredweight of milk sold increased from $12.84 to $14.95 or 16.4 percent over the total time period. The margin or difference between the total costs of producing milk and the average price received improved from $-0.23 per hundredweight in 1987 to $+0.22 per hundredweight in 1989. In 1990, the return over total costs was $-0.32.

Capital investments per cow have increased by almost 13 percent between 1987 and 1990. Machinery and equipment investments per cow have increased seven percent in 1990 over 1989 and 15 percent over 1987. Real estate investments per cow have steadily increased. Capital turnover at 1.96 years in 1989 was at its lowest and healthiest point during this four year period. In 1990, the capital turnover increased to 2.04 years.

Average net farm income without appreciation increased 24 percent over the four year period with significant improvement occurring in 1989. Net farm income without appreciation decreased 11 percent from 1989 to 1990. Rates of return on farm capital increased in 1989 to exceed the levels achieved in 1987 but dropped below 1988 levels in 1990. The 5.6 percent return on equity capital is the lowest average return since 1986.

Over this period, net worth has exhibited a substantial 28 percent increase from $416,632 in 1987 to $532,199 in 1990. The debt to asset ratio has improved from 0.35 in 1987 to 0.34 in 1990. Farm debt per cow was $2,233 in 1990, up 13 percent from 1989 and 10 percent from 1987.

In 1990, these 206 farms were larger, producing more milk per cow but profitability declined as costs of production increased more than farm receipts. See the Appendix beginning on page 61 for a description of the economic environment facing New York dairy farmers.

Table 1. COMPARISON OF FARM BUSINESS SUMMARIES FOR 1987-1990
Same 206 New York Dairy Farms

Selected Factors	1987	1988	1989	1990
Size of Business

Farm debt per cow	$2,035	$2,101	$1,976	$2,233

SUMMARY AND ANALYSIS OF THE FARM BUSINESS

Business Characteristics and Resources Used

Recognition of important business characteristics and identification of the farm resources used is necessary for evaluating management performance. The combination of resources used and management practices employed is known as farm organization. Important farm business characteristics, the number of farms reporting these characteristics, and a listing of the average labor, land, and dairy cattle resources used in 1990 are presented in the following table.

Table 2. BUSINESS CHARACTERISTICS AND RESOURCES USED
395 New York Dairy Farms, 1990

No. Dairy Livestock	Cows	Heifers
Beginning of Year	107	84
End of Year	111	90
Average for Year	107	87

Type of Business	Number	Percent
Sole Proprietorship	273	69
Partnership	100	25
Corporation	22	6

Barn Type	Number	Percent

None	30	8

Labor Force	Average	Percent
Operators	16.7 mo.	41
Family paid	5.0 mo.	12
Family unpaid	2.8 mo.	7
Hired	16.0 mo.	40
Total Months	40.5 mo.	100

	Average
Operators (total = 549)	1.39
Age	42
Education	13 yrs.
Estimated Value of Labor & Management	$30,613

	Farms Reporting	
Land Used	Number	Average
Total acres:		
Owned	395	357
Rented	336	163
Tillable acres:		
Owned	395	204
Rented	331	144
Total	395	325

There were 549 full-time operator equivalents on the 395 dairy farms for an average of 1.39 operators per farm. The operators averaged 42 years of age and 13 years of formal education. Additional data on the labor force is in Table 37.

All 395 farm businesses included in the regular dairy summary own farm real estate. Dairy farm renters are summarized separately later in this publication. However, 331 of the dairy farm owners rented an average of 144 acres of tillable land in 1990. The 395 farms averaged 325 total tillable acres per farm of which 121 acres were rented. Tables 18 and 24 contain additional information on land use and the dairy herd.

Accounting Procedures

Accrual accounting is used for measuring farm profitability. It expresses value of production and cost of production for the year, regardless of whether cash was received or expended. Accrual is a more accurate method than cash accounting when examining the profitability of a business in a particular year. Cash expenses and cash receipts are used when evaluating the cash flow position of the business.

The accrual accounting system considers changes in accounts payable and receivable, prepaid expenses, and changes in inventory of not only such items as crops and livestock, but also the inventory of production items such as fertilizer, seed, and fuel. In this manner, the total costs of production and the total value of production are obtained to provide an accurate representation of profitability in that year.

Accrual accounting is complimented by accounting procedures used to separate changes in inventory into changes caused by price and those caused by quality or quantity changes. Separating price changes (appreciation) from physical changes in the farm inventory are important in determining farm profitability. Appreciation of farm assets are included in the return to farm capital, but excluded from the return to labor and management.

Income Statement

The accrual income statement on the following page begins with an accounting of all farm business expenses. Farm business expenditures are grouped into seven major categories.

Hired labor includes gross wages plus the farm share of social security, worker's compensation insurance, health insurance, and other employee benefits paid by the farm employer.

Feed expenses are divided into purchased dairy grain and concentrate, purchased dairy roughage, and all feed purchased for nondairy livestock to allow more thorough analysis of dairy herd feeding costs. The costs of growing grain and roughage are not included in cash and accrual feed expenses.

Machinery costs represent all the operating costs of using power machinery on the farm. Ownership costs are excluded here but are included in the analysis of machinery costs.

Livestock expenses include the cost of supplies and services directly associated with the care and maintenance of the dairy herd, plus milk marketing costs. The purchase of replacement cattle is considered a herd maintenance expense while expansion livestock is not.

Crop expenses include the costs of fertilizer, lime, seeds, pesticides, and other crop supplies.

Real estate expenses are the direct costs associated with owning and maintaining farmland and buildings.

Other includes insurance, the farm share of utilities, interest paid on all farm indebtedness, and miscellaneous costs. Expansion livestock and machinery and building depreciation are nonoperating costs included in total expenses. Depreciation charges are based on income tax figures.

Cash and accrual farm expenses are summarized below. Total operating accrual expenses for the 395 farms averaged $691 per day and 89 percent of total farm accrual expenses.

Table 3. CASH AND ACCRUAL FARM EXPENSES
395 New York Dairy Farms, 1990

Expense Item	Cash Paid +	Change in Inventory or Prepaid Expense +	Change in Accounts Payable =	Accrual Expenses	Percent

Machinery depreciation				16,624	
Building depreciation				8,986	
TOTAL ACCRUAL EXPENSES				$281,829	

Cash paid is the actual amount of money paid out during the year and does not necessarily represent the cost of goods and services actually used.

Change in inventory represents feeds and supplies purchased this year but not used (negative change), and inputs purchased in a prior year and used this year (positive change). The purchased dairy grain and concentrate inventory increased $3,502.

Prepaid expenses (noted by « in the above table) are advance payments made for services and noninventory items. For example, advance payments for rent increased an average of $17 per farm in 1990, and that increase is subtracted from cash rent to determine the correct 1990 accrual rental expense.

Changes in accounts payable reflect supplies/services used in this year's production but not paid for (positive change), and payments for production inputs used in a prior year (negative change).

Accrual expenses are cash expenses adjusted for changes in inventory, prepaid expenses, and accounts payable. They are the total costs of inputs actually used in this year's business.

Cash and accrual farm receipts are presented in the following table. Total cash receipts averaged $321,777 per farm. Total accrual receipts averaged $328,849 per farm. Accrual receipts were greater than cash receipts due to dairy herd growth and increases in crop inventory. Cow numbers increased an average of four head per farm and the homegrown feed inventory increased $46 per cow.

Table 4. CASH AND ACCRUAL FARM RECEIPTS
395 New York Dairy Farms, 1990

Receipt Item	Cash Receipts	+	Change in Inventory	+	Change in Accounts Receivable	=	Accrual Receipts	Percent
Milk sales	$288,691				$-4,859		$283,832	86

- Nonfarm noncash capital**			(-) 86				(-) 86	
Total	$321,777		$11,787		$-4,715		$328,849	100

*Change in advanced government receipts.
**Gifts or inheritances of cattle or crops included in inventory.

Cash receipts include the gross value of milk checks received during the year plus all other payments received for the sale of farm products, services, and government programs.

Accrual receipts represent the value of all farm commodities produced and services actually provided by the farmer during the year. Increases in livestock inventory caused by herd growth and/or quality, are included. Decreases in inventory caused by herd reduction are deducted. Changes in inventories of crops grown are accounted for. Changes in advanced government receipts are the amount government payments received for participating in a future year's program have changed from 1989 to 1990. An increase requires a negative adjustment to cash receipts and a decrease a positive adjustment. Changes in accounts receivable include the difference between the January milk check for this December's marketings and the previous January's check, and other delayed payments.

Nonfarm noncash capital are gifts and inheritances of cattle and crops received by the farm owner/operator, and included in inventory or used in the business during the year. They are deducted from growth in inventory and reduce accrual receipts because they came from outside the farm business. Gifts and inheritances of machinery and real estate are accounted for in Table 12.

Profitability Analysis

Farm owners/operators contribute labor, management, and capital to their businesses. The best combination of these resources produces optimum profits. Farm profits can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

Net farm income is the total combined return to the farm operator(s) and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, financing, and owning the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed with and without appreciation. Appreciation represents the change in farm inventory values caused by changes in prices during the year. Appreciation is a major factor contributing to changes in farm net worth and must be included in the profitability analysis.

Table 5. NET FARM INCOME
395 New York Dairy Farms, 1990

Item	Average 395 Farms	Average Top 10% Farms*
Total accrual receipts	$328,849	$1,069,802
+ Appreciation: Livestock	-1,075	13
Machinery	1,794	3,231
Real Estate	8,638	29,422
Other Stock/Cert.	195	865
= Total including appreciation	$338,401	$1,103,333
- Total accrual expenses	281,829	879,747
= Net Farm Income (with appreciation)	$ 56,572	$ 223,586
Net Farm Income (without appreciation)	$ 47,020	$ 190,055

*Average of 40 farms with highest net farm incomes (without appreciation).

Return to operator(s') labor, management, and equity capital measures the total business profits for the farm operators. It is calculated by deducting a charge for unpaid family labor from net farm income. Operator(s') labor is not included in unpaid family labor. Return to operator(s') labor, management, and equity capital has been compiled with and without appreciation. Appreciation is considered an important part of the return to ownership of farm assets.

Table 6. RETURN TO OPERATOR(S') LABOR, MANAGEMENT, AND EQUITY
395 New York Dairy Farms, 1990

Item	Average 395 Farms		Average Top 10% Farms	
	With Apprec.	Without Apprec.	With Apprec.	Without Apprec.
Net farm income	$56,572	$47,020	$223,586	$190,055
- Family labor unpaid @ $1,250 per month	3,538	3,538	1,600	1,600
= Return to Operator(s') Labor, Management, & Equity	$53,034	$43,482	$221,986	$188,455

Labor and management income is the share of net farm income without appreciation returned to the operator(s') labor and management. Appreciation is not included as part of the return to labor and management. Labor and management income is determined by deducting the cost of using equity capital at a real interest rate of five percent, from the return to operator(s') labor, management, and equity capital excluding appreciation. The interest charge reflects the long-term average rate of return above inflation that a farmer might expect to earn in comparable risk investments.

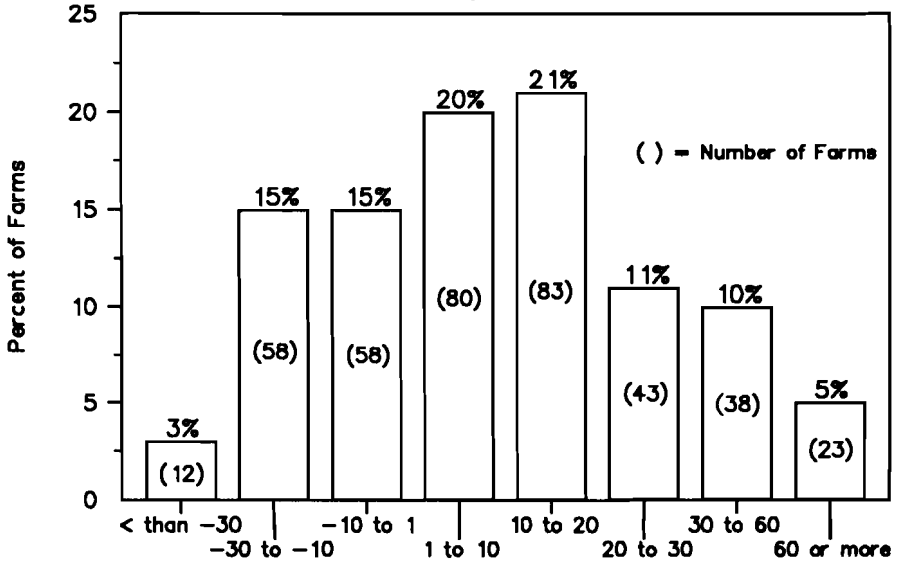
Labor and management income per operator measures the return to one full-time operator's labor and management. A full-time operator provides 12 months of labor and management.

Table 7. LABOR AND MANAGEMENT INCOME
395 New York Dairy Farms, 1990

Item	Average 395 Farms		Average Top 10% Farms
Return to operator(s') labor, management, & equity without appreciation	$43,482		$188,455
- Real interest @ 5% on $471,322 equity capital for average & $1,208,969 for the top 10%	23,566		60,448
= Labor & Management Income (1.39 operators)	$19,916	(1.77)	$128,007
Labor & Management Income per Operator	$14,328		$ 72,320

Labor and management income per operator averaged $14,328 on these 395 dairy farms in 1990. The range in labor and management income per operator was from less than -$105,000 to more than $300,000. Returns to labor and management were negative on 33 percent of the farms. Labor and management income per operator ranged from $0 to $19,999 on 41 percent of the farms while 26 percent showed labor and management incomes of $20,000 or more per operator.

Chart 1. DISTRIBUTION OF LABOR AND MANAGEMENT INCOMES PER OPERATOR
395 New York Dairy Farms, 1990



Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost or value of operator(s') labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth or equity capital. Return on total capital is calculated by adding interest paid to the return on equity capital and then dividing by average farm assets to calculate the rate of return on total capital.

Table 8. RETURN ON EQUITY CAPITAL
395 New York Dairy Farms, 1990

Item	Average 395 Farms	Average Top 10% Farms
Return to operators' labor, management, & equity capital with appreciation	$53,034	$221,986
- Value of operators' labor & management	30,613	52,989
= Return on equity capital with appreciation	$22,421	$168,997
+ Interest paid	19,914	54,015
= Return on total capital with appreciation	$42,335	$223,012
Return on equity capital without appreciation	$12,869	$135,466
Return on total capital without appreciation	$32,783	$189,481
Rate of return on average equity capital:		
with appreciation	4.8%	14.0%
without appreciation	2.7%	11.2%
Rate of return on average total capital:		
with appreciation	6.0%	12.1%
without appreciation	4.7%	10.3%

Return to all labor and management input is another measure of profitability of a business that can be calculated. Table 9 shows that farms with higher return to all capital with appreciation also had significantly higher return per hour to all labor and management.

Table 9. RETURNS TO ALL LABOR AND MANAGEMENT BY RETURN TO ALL CAPITAL WITH APPRECIATION
395 New York Dairy Farms, 1990

Returns/hour (3,000 hrs./worker/yr.)	$0.89	$3.09	$4.67	$9.61

Farm and Family Financial Status

Evaluating the financial status of the farm business and the farm family is an important part of business analysis. The first step is to inventory all the assets, determine all the liabilities, and fill out the balance sheet. The second step is to analyze the completed balance sheet by evaluating the relationships between assets and liabilities and changes made during the year.

Table 10. 1990 FARM BUSINESS AND NONFARM BALANCE SHEET

Total Nonfarm	$61,372	$64,195	TOTAL FARM & NON-FARM NET WORTH	$520,304	$541,459

*Average of 249 farms completing the nonfarm balance sheet.

Financial lease obligations are included in the balance sheet. The present values of all future payments are listed as liabilities since the farmer (lessee) is committed to make the payments. The present values are also listed as assets, representing the future value the item has to the business.

The farm balance sheet analysis includes financial and debt ratios and factors measuring levels of debt. Percent equity is calculated by dividing farm net worth by farm assets. Equity increases as the value of assets increase more than liabilities. The debt to asset ratio is compiled by dividing farm liabilities by farm assets. Low debt to asset ratios reflect strength in solvency and the potential capacity to borrow. The debt analysis ratios show how well the debt is structured and managed. Debt levels per unit of production include some old standards that are still useful if used with measures of cash flow and repayment ability.

Table 11. FARM BALANCE SHEET ANALYSIS
395 New York Dairy Farms, 1990

Item	Average 395 Farms	Average Top 10% Farms
Farm Financial Ratios:		
Percent equity	66%	64%

Value end of year		$330,904		$137,111	$156,636

*$14,640 land and $18,576 buildings and/or depreciable improvements.
**Gifts and inheritances of property transferred into the farm business from outside.
***Excludes $917 of appreciation on assets sold during the year.

Cash Flow Summary and Analysis

Completing an annual cash flow summary and analysis is important to determine how well the cash generated by the business, plus that brought in from outside, met the annual cash needs of the business and the farm family. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The annual cash flow statement is structured to compare all the cash inflows with all the cash outflows for the year. Cash inflows include all the cash farm receipts, receipts from the sale of farm assets, additional funds borrowed, cash used in the business from the sale of nonfarm capital, as well as the amount of cash available at the beginning of the year. Cash outflows include all the cash farm expenses, capital purchases, principal payments, money taken out of the business, and the cash balance left at year's end. When all the cash inflows and outflows are correct, the statement will balance. The positive imbalance of $1,020 indicates that on average, farms had more inflows than were accounted for by outflows.

Table 13. ANNUAL CASH FLOW STATEMENT
395 New York Dairy Farms, 1990

Item	Average 395 Farms	Average Top 10% Farms
Cash Inflows		
Beginning farm cash, checking & savings	$ 7,367	$ 19,662
Cash farm receipts	321,777	1,028,967
Sale of assets: Machinery	1,340	3,751

*Excludes change in interest account payable.

Repayment Analysis

The second step in cash flow planning is to compare and evaluate debt payments planned and made last year, and estimate the payments required in the current year. It is helpful to compare and evaluate a farm's repayment position by using debt payments per unit of production and receipt/debt payment ratios. The data below are for farms that completed summaries for both 1989 and 1990.

Table 15. FARM DEBT PAYMENTS PLANNED
New York Dairy Farms, 1990

	Same 294 Dairy Farms			Average Top 10% Farms		
	1990 Payments		Planned	1990 Payments		Planned
Debt Payments	Planned	Made	1991	Planned	Made	1991
Long-term	$14,903	$21,660	$18,075	$27,641	$74,870	$51,322
Intermediate-term	26,000	31,669	27,675	71,891	96,908	74,055
Short-term	2,573	2,414	3,685	10,300	3,034	15,390
Operating (net red.)	1,807	0	5,159	9,466	0	33,665
Accts. payable (net reduction)	1,043	0	860	3,655	1,737	3,920
Total	$46,326	$55,743	$55,453	$122,953	$176,549	$178,352
Per cow	$414	$498		$370	$532	
Per cwt. 1990 milk	$2.31	$2.77		$1.90	$2.73	
% of 1990 milk rec.	15%	19%		13%	18%	

The cash flow coverage ratio measures the ability of the farm business to meet its planned debt payments. The ratio shows the percentage of last year's planned payments that could have been made with last year's available cash.

Table 16. CASH FLOW COVERAGE RATIO
New York Dairy Farms, 1990

Item	Same 294 Dairy Farms	Average Top 10% Farms
Cash farm receipts	$340,240	$1,093,368
- Cash farm expenses	269,986	863,204
+ Interest paid	20,396	56,171
- Net personal withdrawals from farm*	35,278	110,772
(A) = Amount Available for Debt Service	$55,372	$175,563
(B) = Debt Payments Planned for 1990	$46,326	$122,953
(A + B) = Cash Flow Coverage Ratio for 1990	1.20	1.43

*Personal withdrawals and family expenditures less nonfarm income and nonfarm money borrowed. If excluded, the cash flow coverage ratio will be incorrect.

A debt to asset ratio is a good measure of the current relationship between assets and liabilities, but not the business' ability to meet cash flow obligations. Even with a debt to asset ratio of less than 40 percent, 22 percent of the farms had a cash flow coverage ratio less than 1.0!

Table 17. DEBT TO ASSET RATIO VS. CASH FLOW COVERAGE
274 New York Dairy Farms, 1990

	Cash Flow Coverage Ratio (Farm & Non-Farm)			
Debt/Asset Ratio	<.5	.5 to .99	1 to 1.49	1.5 & >
	percent of farms			
<40%	8	14	17	21
40 to 70%	3	14	12	8
70% & over	0	1	1	1

Cropping Program Analysis

The cropping program is an important part of the dairy farm business that sometimes is overlooked and neglected. A complete evaluation of available land resources, how they are being used, how well crops are producing and what it costs to produce them, is required to evaluate alternative cropping and feed purchase choices.

Table 18. LAND RESOURCES AND CROP PRODUCTION
395 New York Dairy Farms, 1990

Item	Average 395 Farms			Average Top 10% Farms		
Land	Owned	Rented	Total	Owned	Rented	Total
Tillable	204	121	325	487	287	774
Nontillable	50	11	61	40	6	46
Other nontillable	103	7	110	165	9	174
Total	356	139	495	692	302	994

Crop Yields	Farms	Acres	Prod/Acre	Farms	Acres	Prod/Acre
Hay crop	393	166	2.7 tn DM	40	275	3.1 tn DM
Corn silage	355	91	14.4 tn	39	282	14.9 tn
			4.8 tn DM			4.9 tn DM
Other forage	45	24	1.7 tn DM	6	24	2.2 tn DM
Total forage	395	250	3.3 tn DM	40	553	4.0 tn DM
Corn grain	194	79	104.2 bu	29	167	109.1 bu
Oats	61	25	56.3 bu	6	24	62.8 bu
Wheat	34	45	58.9 bu	12	66	58.2 bu
Other crops	55	53		13	135	
Tillable pasture	123	30		10	43	
Idle	150	28		19	46	
Total Tillable Acres	395	325		40	774	

Crop acres and yields compiled for the average represent only the number of farms reporting each crop. All but two of the 395 farms produced hay or hay crop silage in 1990. Ninety percent produced corn silage, 49 percent grew and harvested corn grain, and 15 percent grew oats for grain. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent.

The following measures of crop management indicate how efficiently the land resource is being used and how well total forage requirements are being met.

Table 19. CROP MANAGEMENT FACTORS
395 New York Dairy Farms, 1990

Item	Average 395 Farms	Average Top 10% Farms
Total tillable acres per cow	3.03	2.47
Total forage acres per cow	2.74	1.77
Harvested forage dry matter, tons per cow	7.79	7.00

In the sixth year of collecting information on individual crop production costs, 164 cooperators allocated direct crop related expenses to hay crop, corn, and other crop production. The data in Table 20 has been compiled to show the average crop related production expenses per acre and per unit for these crops. Note that labor and machinery costs have not been included. Total corn expenses are allocated to corn silage and corn grain based on the proportion of acres in each crop. In Table 20, the total per tillable acre represents all 395 farms and the expenses for individual crops are for the 164 farms which submitted data.

Table 20. CROP RELATED ACCRUAL EXPENSES
New York Dairy Farms, 1990

Expense	Average 395 Farms Total Per Tillable Acre	Average 164 Farms Reporting Individual Crop Costs: Hay Crop Per Acre	Hay Crop Per Ton DM	All Corn Per Acre	Corn Silage Per Ton DM	Corn Grain Per Dry Shell Bu.
Fertilizer & lime	$29.11	$19.91	$ 7.27	$43.15	$ 9.06	$0.41

Total	$71.37	$48.39	$13.98	$91.20	$17.91	$0.85

Most machinery costs are associated with crop production and should be analyzed with the crop enterprise. Total machinery expenses include the major fixed costs (interest and depreciation), as well as the accrual operating costs. Machinery costs have not been allocated to individual crops, but they are calculated per total tillable acre.

Table 21. ACCRUAL MACHINERY EXPENSES

Total	$88.57	$92.90	$105.13	$89.65	$90.43	$96.84
Accrual Crop Expense Per:*	Ton DM of Corn Silage			Dry Shell Bushel of Corn Grain		
Fertilizer & lime	$11.06	$ 8.54	$ 8.49	$0.53	$0.41	$0.34
Seeds & plants	6.62	4.45	3.65	0.28	0.22	0.18
Spray & other crop expense	6.43	5.73	4.59	0.34	0.26	0.21
Total	$24.11	$18.72	$16.73	$1.15	$0.89	$0.73

*Total corn expenses are allocated to corn silage and corn grain based on the proportion of acres in each crop.

From the above two tables, it is important to observe that as forage yields per acre increase, crop related expenses per acre also increase. For corn silage and corn grain, crop expense per ton of dry matter and per bushel decreased as yield per acre increased. Hay crop expenses per ton of dry matter decrease as yields exceed two tons per acre and decrease substantially at yields greater than 3.5 tons. The lower dry matter costs on this group of 26 farms can be attributed to significantly higher yields with controlled expenses per acre.

Dairy Program Analysis

An analysis of the dairy enterprise can be the most important step in evaluating the strengths and weaknesses of the dairy farm business. Changes in dairy herd size and market values are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and quality. This increase in inventory is included as an accrual farm receipt when calculating profitability with and without appreciation.

Table 24. DAIRY HERD INVENTORY
395 New York Dairy Farms, 1990

Item	Dairy Cows		Heifers					
			Bred		Open		Calves	
	No.	Value	No.	Value	No.	Value	No.	Value
Beg. year (owned)	107	$105,266	32	$24,566	27	$13,304	25	$6,329
+ Change w/o apprec.		3,600		1,892		919		429
+ Appreciation		-969		-156		-21		-6
End year (owned)	110	$107,897	34	$26,302	29	$14,202	27	$6,752
End incl. leased	111							
Average number	107		87	(all age groups)

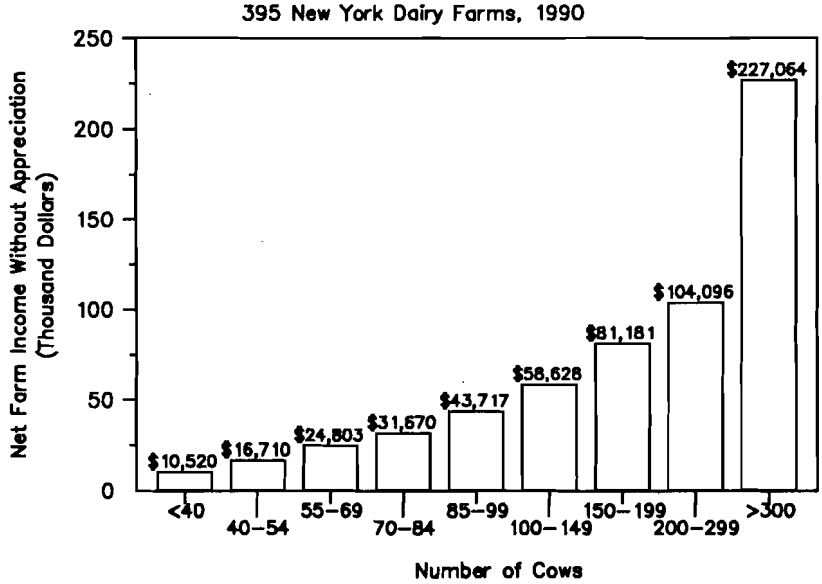
Average number	313		252	(all age groups)				

There is a strong relationship between farm size and farm income on well managed dairy farms. When data is sorted by herd size categories this relationship becomes apparent as shown in Chart 2. Net farm income increased $216,544 while labor and management income per operator jumped $84,691 as herd size increased from less than 40 to over 300 cows per farm.

Chart 2. NET FARM INCOME (WITHOUT APPRECIATION) BY HERD SIZE
395 New York Dairy Farms, 1990



Total milk sold and milk sold per cow are extremely valuable measures of productivity on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year.

Table 25. MILK PRODUCTION
395 New York Dairy Farms, 1990

Item	Average 395 Farms	Average Top 10% Farms
Total milk sold, lbs.	1,900,483	6,077,583
Milk sold per cow, lbs.	17,720	19,419
Average milk plant test, percent butterfat	3.6%	3.4%

Farms with higher rates of production tend to have higher profits. In 1990, the farms that sold more than 18,000 pounds of milk per cow had above average profit margins.

Table 26. MILK SOLD PER COW AND FARM INCOME MEASURES
395 New York Dairy Farms, 1990

Pounds of Milk Sold Per Cow	Number of Farms	Average Number of Cows	Net Farm Income w/o Apprec.	Net Farm Income Per Cow	Labor & Management Income/Oper.
Under 12,000	17	54	$ 7,835	$145	$-7,755
12,000 to 13,999	40	71	18,961	267	-1,337
14,000 to 14,999	26	78	23,722	304	727
15,000 to 15,999	37	88	37,523	426	15,099
16,000 to 16,999	66	85	28,230	332	3,467
17,000 to 17,999	70	116	42,922	370	12,579
18,000 to 19,999	89	128	65,506	512	20,983
20,000 & over	50	163	99,581	611	40,869

The cost of producing milk has been compiled using the whole farm method in Table 27 on page 22. The following steps are used in the calculations:

1. The cost of expansion livestock is included in total accrual operating expenses to offset any related inventory increase included in accrual receipts.

2. Accrual milk sales are subtracted from total accrual receipts to obtain total accrual non-milk receipts which are used as a representation of total non-milk operating costs.

3. Total accrual non-milk receipts are subtracted from total accrual operating expenses including expansion livestock to calculate the operating costs of producing milk.

4. Machinery depreciation, building depreciation, and the value of family labor unpaid are added to operating costs to determine the total costs of producing milk excluding operator's resources.

5. The opportunity costs of equity capital, operator's labor and operator's management are added to all other costs to obtain the total costs of producing milk. This cost includes all the operating, depreciation, and imputed costs of producing milk.

Table 27. COST OF PRODUCING MILK WHOLE FARM METHOD CALCULATIONS
395 New York Dairy Farms and Top 10 Percent of Farms, 1990

Item	Average of 395 New York Dairy Farms		Average of Top 10% Farms	
Total Accrual Oper. Expenses	$252,163		$785,738	
Expansion Livestock, Accrual	+4,056		+17,773	
1. Total Accrual Oper. Expenses, Incl. Expansion Livestock		$256,219		$803,511
Total Accrual Receipts	$328,849		$1,069,802	
Milk Sales, Accrual	-283,832		-912,657	
2. Total Accrual Non-Milk Receipts		-45,017		-157,145
3. Oper. Costs of Producing Milk		$211,202		$646,366
Cwt. of Milk Sold	+19,004.8		+60,775.8	
Operating Costs/Cwt.	=$11.11		=$10.64	
Machinery Depreciation		+16,624		+44,763
Building Depreciation		+8,986		+31,473
Family Labor Unpaid ($1,250/month)		+3,538		+1,600
4. Total Costs of Producing Milk Excl. Operator's Resources		$240,350		$724,202
Cwt. of Milk Sold	+19,004.8		+60,775.8	
Total Costs Excluding Operators Resources/Cwt.	=$12.65		=$11.92	
Real Interest on Equity Cap.		+23,566		+60,448
Value of Oper. Labor & Mgmt.		+30,613		+52,989
5. Total Costs of Producing Milk		$294,529		$837,639
Cwt. Milk Sold	+19,004.8		+60,775.8	
Total Costs/Cwt.	=$15.50		=$13.78	

The three measures of accrual costs of producing milk per cow and per hundredweight are compared with accrual receipts from milk sales in Table 28.

Table 28. ACCRUAL RECEIPTS FROM DAIRY AND COST OF PRODUCING MILK
395 New York Dairy Farms, 1990

Item	Average 395 Farms			Average Top 10% Farms		
	Total	Per Cow	Per Cwt.	Total	Per Cow	Per Cwt.
Accrual Costs of Producing Milk						
Operating costs	$211,202	$1,968	$11.11	$646,366	$2,065	$10.64
Total costs without op(s') labor, mgmt. & capital	$240,350	$2,240	$12.65	$724,202	$2,314	$11.92
Total Costs	$294,529	$2,745	$15.50	$837,639	$2,676	$13.78
Accrual Receipts from Milk	$283,832	$2,645	$14.93	$912,657	$2,916	$15.02

The total cost of producing milk on all 395 dairy farms averaged $15.50 per hundredweight, $0.57 more than the average price received for milk sold from these farms during 1990. This implies dairy farmers are willing to receive returns less than the stated charges on their labor and equity capital to remain in farming. The imputed costs or charge for the operator's labor, management, and equity capital averaged $2.85 per hundredweight in 1990. The computed returns averaged $2.29 per hundredweight. See Table 55 on page 53 for detailed costs per hundredweight of milk.

The strong relationship between milk output per cow and the total costs of producing milk are shown in Table 29. Farms selling less than 15,000 pounds of milk per cow had an average total cost of production of $18.60 per hundredweight while those selling 18,000 pounds and over averaged approximately $14.70 for a difference of $3.90 per hundredweight.

Table 29. FARM COST OF PRODUCING MILK BY MILK SOLD PER COW
395 New York Dairy Farms, 1990

Pounds Milk Sold Per Cow	Cost per Hundredweight			Accrual Receipts From Milk Per Cwt.	Return/Cwt. to Opertor's Labor, Mgmt. & Capital
	Operating	Excluding Operator's Labor, Mgmt. & Capital	Total		
Under 12,000	$11.94	$14.72	$20.30	$15.21	$0.49
12,000 - 13,999	11.71	13.52	18.07	15.09	1.57
14,000 - 14,999	11.45	13.13	17.46	14.84	1.71
15,000 - 15,999	10.96	12.41	15.36	14.95	2.54
16,000 - 16,999	11.46	13.13	16.38	14.82	1.69
17,000 - 17,999	11.53	12.94	15.58	14.92	1.98
18,000 - 19,999	10.83	12.43	15.15	14.96	2.53
20,000 & over	10.75	12.10	14.25	14.94	2.84

Data in Table 30 show average operating costs of producing milk somewhat higher on dairy farms with 200 cows and over because more labor is included as an operating expense. Total costs of production generally decline as herd size increases because the costs of operator's resources are spread over more units of production.

Table 30. FARM COST OF PRODUCING MILK BY HERD SIZE
395 New York Dairy Farms, 1990

Number of Cows	Cost per Hundredweight			Accrual Receipts From Milk Per Cwt.	Return/Cwt. to Opertor's Labor, Mgmt. & Capital
	Operating	Excluding Operator's Labor, Mgmt. & Capital	Total		
Under 40	$11.07	$13.07	$18.93	$14.62	$1.55
40 to 54	10.96	13.17	17.67	14.74	1.57
55 to 69	10.74	12.62	16.90	14.80	2.18
70 to 84	10.94	12.76	16.27	14.90	2.14
85 to 99	10.80	12.46	15.81	14.88	2.42
100 to 149	10.89	12.38	15.28	14.95	2.57
150 to 199	11.08	12.45	14.98	14.98	2.53
200 to 299	11.55	12.80	14.98	15.07	2.27
300 & over	11.54	12.75	14.18	15.02	2.27

Controlling costs is a very important part of managing a dairy farm business. Farms with lower operating costs are somewhat smaller, but are very similar in milk sold per cow and crop yields to farms with higher costs. The big differences are in hired labor and purchased grain and concentrate expenses per hundredweight of milk. Those two costs are $1.34 per hundredweight lower on the low cost farms than the next higher cost farm category.

Table 31. SELECTED BUSINESS FACTORS BY OPERATING COSTS OF PRODUCING MILK PER HUNDREDWEIGHT
395 New York Dairy Farms, 1990

	Operating Cost of Producing Milk Per Cwt.			
Item	<$9.00	$9.00-11.00	$11.00-13.00	>$13.00

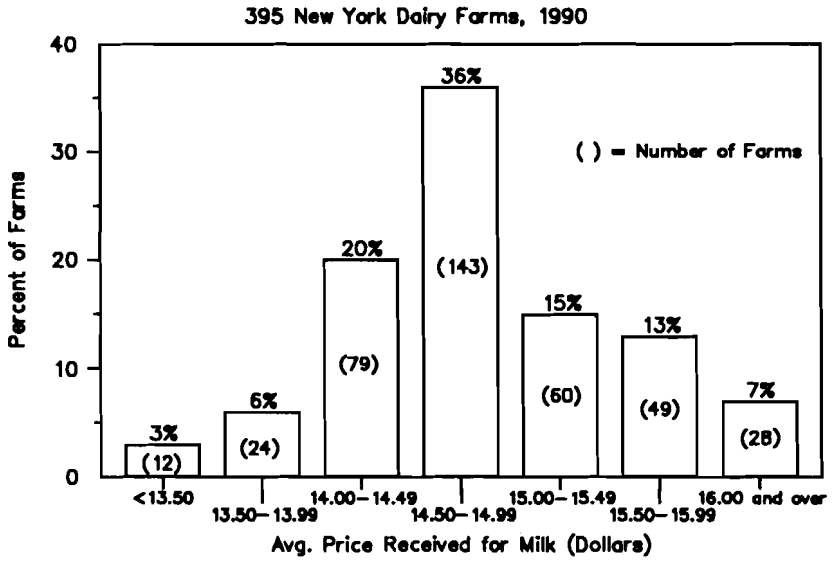
Equity capital w/apprec.	8.4%	6.8%	4.9%	-3.4%
All capital w/apprec.	8.4%	7.2%	6.5%	1.0%

The average or mean price per hundredweight of milk sold is calculated by dividing the gross milk receipts for the year by the total pounds of milk sold. The average price for the 395 farms was $14.93 but there was considerable variation among the individual farms. The variation in average price received and the distribution of farms around the mean is shown below.

Chart 3. VARIATION IN AVERAGE MILK PRICE



Fifty-six percent of the farms received from $14.00 to $14.99 per hundredweight of milk sold. Thirty-five percent of the farms received $15.00 or more per hundredweight and nine percent received less than $14.00 per hundredweight. Location and organization of markets are factors contributing to the variability of milk prices on these dairy farms. Management practices on farms as well as in milk companies also affect farm milk prices. Seasonality of production and butterfat test are two variables under the direct control of the farm manager.

The accrual operating expenses most commonly associated with the dairy enterprise are listed in the table below. Evaluating these costs per unit of production enables the comparison of different size dairy farms for strengths and areas for improvement.

Table 32. DAIRY RELATED ACCRUAL EXPENSES
395 New York Dairy Farms, 1990

Item	Average 395 Farms		Average Top 10% Farms	
	Per Cow	Per Cwt.	Per Cow	Per Cwt.
Purc. dairy grain & conc.	$733	$4.14	$779	$4.01
Purchased dairy roughage	23	0.13	34	0.17
Total Purchased Dairy Feed	$756	$4.27	$813	$4.18
Purchased grain & conc. as % of milk receipts	28%		27%	
Purchased feed & crop exp.	$923	$5.21	$989	$5.10
Purchased feed & crop exp. as % of milk receipts	35%		34%	
Breeding	$34	$0.19	$31	$0.16
Veterinary & medicine	$57	$0.32	$71	$0.36
Milk marketing	$93	$0.53	$73	$0.37
Cattle lease	$3	$0.02	$3	$0.02
Other livestock expense	$118	$0.67	$124	$0.64

Feed costs per cow and per hundredweight of milk sold are influenced by a number of factors. These cost measures are affected by the amount of homegrown grains fed, quality and quantity of the roughage harvested, and the number of youngstock. Feed costs are also influenced by the farmer's ability to purchase grains and concentrates at reasonable prices and to balance nutrients fed with energy and protein requirements.

Purchased dairy grain and concentrates per cow is calculated by dividing the total accrual expenses for dairy grains and concentrates purchased by the average number of cows. Because this also includes the amount spent for calf and heifer feed, it actually represents the feed cost for one cow and 0.81 replacement being raised.

Purchased feed and crop expense per hundredweight of milk is one of the most useful feed cost measures because it accounts for some of the variations in feeding and cropping programs, and milk production between herds. It includes all purchased feeds used on the farm, and it includes crop expenses that are associated with feed production.

Purchased grain and concentrates as percent of milk sales is calculated by dividing feed purchased by milk receipts. This is another useful measure of feed efficiency although variations in homegrown grains fed and milk prices can have an adverse effect. Purchased feed and crop expense as percent of milk sales removes much of the variation caused by the feeding of home grown grains.

Cost control has an important affect on farm profitability. The relationship purchased feed and crop expense per hundredweight of milk has with farm profitability is shown in the following table.

Table 33. PURCHASED FEED AND CROP EXPENSE PER HUNDREDWEIGHT OF MILK AND FARM INCOME MEASURES
395 New York Dairy Farms, 1990

Feed & Crop Exp. Per Cwt. of Milk	Number of Farms	Number of Cows	Forage Dry Matter Harvested Per Cow	Pounds Milk Per Cow	Net Farm Income Without Apprec.	Labor & Management Income Per Operator
$6.50 or more	43	113	7.3	16,934	$25,723	$-1,876
6.00 to 6.49	36	120	7.6	17,299	44,942	11,795
5.50 to 5.99	63	121	7.8	17,844	45,952	13,315
5.00 to 5.49	71	112	7.7	17,876	46,629	16,084
4.50 to 4.99	83	92	8.3	17,720	43,635	12,921
4.00 to 4.49	53	108	7.9	17,743	56,527	18,979
3.50 to 3.99	26	100	8.1	19,102	72,117	35,641
Less than 3.50	20	86	7.4	17,589	57,575	21,007

On the average, farms with purchased feed and crop expenses exceeding $6.50 per hundredweight of milk sold reported well below average farm profits. Farms reporting less than $4.50 per hundredweight showed above average profits. However, reducing feed and crop expenses does not necessarily lead to higher profits particularly when milk output per cow falls below average.

Capital and Labor Efficiency Analysis

Capital efficiency factors measure how intensively capital is being used in the farm business. Measures of labor efficiency are key indicators of the amount of work each worker has accomplished.

Table 34. CAPITAL EFFICIENCY
395 New York Dairy Farms, 1990

Item (Average for Year)	Per Worker	Per Cow	Per Tillable Acre	Per Tillable Acre Owned
Farm capital	$208,528	$6,556	$2,165	$3,448
Real estate		$2,977		$1,566
Machinery & equipment	$39,225	$1,233	$407	
Capital turnover, years		2.08		
Average Top 10% Farms:				
Farm capital	$239,642	$5,871	$2,374	$3,774
Real estate		$2,504		$1,609
Machinery & equipment	$41,174	$1,009	$408	
Capital turnover, years		1.67		

Capital turnover measures the number of years of farm receipts required to equal or "turnover" capital investment. It is computed by dividing the average farm assets by the year's total farm accrual receipts including appreciation. The relationship capital turnover has to farm profitability and other factors is shown in the following table. As a general rule, dairy farmers should aim for a capital turnover rate of 2.5 years or less.

Table 35. CAPITAL TURNOVER AND LABOR AND MANAGEMENT INCOME
395 New York Dairy Farms, 1990

Capital Turnover Rate - Years	No. of Farms	No. of Cows	Farm Capital (average for year) Per Cow	Farm Capital (average for year) Per Worker	Labor & Mgt. Inc. Per Operator	Net Farm Income (w/o apprec.)
Less than 1.5	25	242	$ 4,576	$170,753	$53,747	$117,044
1.5 to 1.99	103	136	5,820	197,389	26,936	66,904
2.0 to 2.49	128	99	6,725	208,644	8,499	38,592
2.5 to 2.99	72	75	8,133	229,693	10,688	39,827
3.0 to 3.49	32	74	8,696	253,459	-6,102	21,039
3.5 & over	35	54	10,148	247,592	-13,016	7,894

The 40 farms with the highest net farm incomes (without appreciation) were considerably above the average of all 395 farms in two measures of labor efficiency. The top 10 percent sold 41 percent more milk per worker than the average of all farms.

Table 36. LABOR EFFICIENCY
395 New York Dairy Farms, 1990

Labor Efficiency	Average 395 Farms Total	Average 395 Farms Per Worker	Average Top 10% Farms Total	Average Top 10% Farms Per Worker
Cows, average number	107	32	313	41
Milk sold, pounds	1,900,483	563,349	6,077,583	792,513
Tillable acres	325	96	774	101

The labor force averaged 3.37 full-time worker equivalents per farm. Forty-one percent of the labor was supplied by the farm operator/managers. There were two operators on 146 farms, three on 41 farms, and nine farms reported four operators.

Labor costs, labor efficiency, and farm profitability are closely related. Farms with high net farm incomes can attribute some of their success to the control of labor and machinery costs. Labor and machinery costs averaged $13 per cow less on the 40 farms in the top decile.

Table 37. LABOR FORCE INVENTORY AND COST ANALYSIS
395 New York Dairy Farms, 1990

Labor Force	Months	Age	Years of Educ.	Value of Labor & Mgmt.
Operator number 1	11.71	44	13	$22,131
Operator number 2	3.85	39	13	6,613
Operator number 3	0.96	39	13	1,633
Operator number 4	0.15	29	12	236
Family paid	5.00			Total $30,613
Family unpaid	2.83			
Hired	15.98			
Total	40.48	+ 12 = 3.37 Worker Equivalent		
		1.39 Operator/Manager Equiv.		
Average Top 10% Farms:				
Total	92.03	+ 12 = 7.67 Worker Equivalent		
Operators'	21.29	+ 12 = 1.77 Operator/Manager Equiv.		

	Average 395 Farms			Avg. Top 10% Farms	
Labor Costs	Total	Per Cow	Per Til. Acre	Per Cow	Per Til. Acre
Value op.s' lab.($1,250/mo)	$ 20,838	$ 194	$ 64.12	$ 85	$ 34.38
Family unpd. ($1,250/mo.)	3,538	33	10.88	5	2.07
Hired	33,651	314	103.54	473	191.14
Total Labor	$ 58,206	$ 541	$178.54	$ 563	$227.59
Machinery Cost	51,870	483	159.60	448	181.11
Total Labor & Mach.	$109,896	$1,024	$338.14	$1,011	$408.70

The relationship of labor efficiency to net farm income is very positive on the 395 farms. The higher outputs of milk sold per worker are partially attributable to more and higher producing cows.

Table 38. MILK SOLD PER WORKER AND NET FARM INCOME
395 New York Dairy Farms, 1990

Pounds of Milk Sold Per Worker	No. of Farms	No. of Cows	Pounds Milk Per Cow	Net Farm Income (w/o apprec.)	Labor & Mgmt. Income Per Operator
Under 300,000	40	46	13,812	$ 8,941	$-6,199
300,000 to 399,999	72	64	15,584	21,150	430
400,000 to 499,999	94	78	16,708	35,053	9,016
500,000 to 599,999	79	91	18,022	47,118	14,874
600,000 to 699,999	54	130	18,032	53,473	16,380
700,000 & over	56	257	19,121	121,230	49,727

Miscellaneous Costs

Costs in addition to feed, machinery, and labor make a sizable impact on total dairy farm expenditures and profits. The "cost conscious" manager checks on all cost items both large and small. Good cost management requires careful planning and priority spending on farm inputs. A number of miscellaneous cost items and cost control measures are reported in the following table to help in a detailed checkup on all farm costs.

Table 39. MISCELLANEOUS COST CONTROL MEASURES
395 New York Dairy Farms, 1990

Item	Average 395 Farms	Average Top 10% Farms
Livestock		
Breeding fees per cow	$34	$31
Veterinary & medicine per cow	$57	$71
Other livestock expense per cow	$118	$124
Milk marketing per cow	$93	$73
Milk marketing per hundredweight milk	$0.53	$0.37
Real Estate		
Land, building, & fence repair per cow	$57	$74
Taxes per cow	$65	$47
Taxes per $1,000 year-end real estate value	$21	$17
Rent paid per cow	$46	$49
Rent paid per acre rented	$35	$51
Total real estate expense per cow	$168	$170
Capital Cost		
Interest paid per cow	$186	$173
Interest on equity per cow	$220	$193
Interest paid as percent of average debt	8.6%	8.6%
Machinery depreciation as percent of beginning inventory plus purchases	11%	12%
Total depreciation per cow	$239	$244
Fixed & Variable Costs*		
Total fixed costs per cow	$888	$816
Fixed costs per hundredweight milk sold	$5.01	$4.20
Total variable costs per cow	$1,992	$2,193
Variable costs per hundredweight milk sold	$11.24	$11.30

*Fixed costs include real estate repairs, taxes, insurance, rent, interest paid, depreciation, unpaid family labor, and interest on equity capital. All other costs were classified as variable.

Fixed costs per cow on the top decile farms were eight percent below the 395 farm average. Fixed costs per hundredweight of milk sold on the top decile farms were $0.81 below the 395 farm average. This results from more intensive use and better management of the resources associated with fixed costs. Variable costs were six cents higher per hundredweight of milk sold on the top farms.

Farm Business Charts

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 395 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

The cost control factors are ranked from low to high, but the lowest cost is not necessarily the most profitable. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

Table 40. FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS
395 New York Dairy Farms, 1990

Size of Business			Rates of Production			Labor Efficiency	
Worker Equivalent	No. of Cows	Pounds Milk Sold	Pounds Milk Sold Per Cow	Tons Hay Crop DM/Acre	Tons Corn Silage Per Acre	Cows Per Worker	Pounds Milk Sold Per Worker
8.7	349	6,643,712	21,193	4.5	20	48	870,895
4.7	157	2,871,316	19,629	3.6	18	40	691,021

899	35	638	1,273	1,099	6.24
1,058	40	807	1,474	1,279	7.11

The next section of the Farm Business Chart provides for comparative analysis of the value and costs of dairy production.

The profitability section shows the variation in farm income by decile and enables a dairy farmer to determine where he or she ranks by using several measures of farm profitability. Remember that each column is independently established and the farms making up the top decile in the first column will not necessarily be on the top of any other column. The dairy farmer who ranks at or near the top of most of these columns is in a very enviable position.

Table 40 (continued) FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS
395 New York Dairy Farms, 1990

Milk Receipts Per Cow	Milk Receipts Per Cwt.	Oper. Cost Milk Per Cow	Oper. Cost Milk Per Cwt.	Total Cost Production Per Cow	Total Cost Production Per Cwt.

-11,058	-9,971	-14,637	-14,241	-34,015	-30,508

Farm Business Charts for farms with freestall barns and 120 cows or less and more than 120 cows, and farms with conventional barns with 60 cows or less and more than 60 cows are discussed in the supplemental section on pages 45-48.

Financial Analysis and Management

Analysis and astute management of farm financial affairs must receive high priority if the farm business is to be successful and if the farm family is to achieve a reasonable living standard.

The farm finance checklist and the financial analysis chart are provided to serve as guidelines. Dairy farmers can determine how their financial management measures up by comparing with average data from other farms.

Table 41. A FARM FINANCE CHECKLIST
395 New York Dairy Farms, 1990

	Average 395 New York Farms	Average Top 10% Farms*
How farm assets are being used (average for the year):		
Total assets (capital) per cow	$6,556	$5,871
Farm assets in livestock	22%	23%
Farm assets in farm real estate	45%	43%
Farm assets in machinery	19%	17%
Measures of debt capacity & debt structure:		
Equity in the business	66%	64%
Farm debt per cow	$2,220	$2,154
Long term debt/asset ratio**	0.37	0.35
Intermediate & current term debt/asset ratio**	0.32	0.36
Intermediate & current term debt as % of total	51%	57%
Debt repayment ability:***		
Cash flow coverage ratio	1.20	1.43
Debt payments made per cow	$498	$532
Debt payments made as % of milk receipts	19%	18%

Indicators of annual financial progress:	Amount	Percent	Amount	Percent
Annual change in farm assets	+$46,970	+6.9%	+$235,516	+13.7%
Annual change in farm debts	+$28,582	+13.1%	+146,659	+26.4%
Annual change in farm net worth	+$18,390	+4.0%	+$88,857	+7.6%

*Forty farms with highest net farm incomes (without appreciation).
**Long or intermediate and current term debt divided by long or intermediate and current term assets.
***Average of 294 farms (30 farms for top 10 percent) that participated in Summary Program both in 1989 and 1990.

The most profitable farms carried $66 less debt per cow, had a greater ability to make 1990 debt payments; however, equity in their business was two percent less than that of the average.

Average farm debts grew 6.2 percent faster than assets during 1990. Average net farm worth increased four percent.

The farm financial analysis chart is designed just like the farm business chart on pages 30-31 and may be used to measure the financial health of the farm business. Most of the financial measures are defined on pages 11, 13, 16, and 27 in this publication.

Table 42. FINANCIAL ANALYSIS CHART
395 New York Dairy Farms, 1990

Liquidity (repayment)				
Debt Payments Per Cow	Available for Debt Service Per Cow	Cash Flow Coverage Ratio	Debt Payments as Percent of Milk Sales	Debt Per Cow

4.27	6,762	2,646	11,419	-47,167

*Dollars of debt per dollar of equity, computed by dividing total liabilities by total equity.

**Return on all farm capital (no deduction for interest paid) divided by total farm assets.

SUPPLEMENTAL INFORMATION

Introduction

Comparisons of business performance by herd size and housing, milking technology and frequency, and numerous other factors are contained in this section. The tables on the following pages are provided for use as a reference, thus, the discussion of each table is at a minimum.

Herd Size Comparisons: A detailed comparison of profitability, financial situation, and business analysis factors across herd sizes is contained in Tables 43 through 45. As herd size increases, the average profitability also increases (Table 43). Net farm income without appreciation was $227,064 per farm for the 300 or more herd size group and $10,520 per farm for those with less than 40 cows. This relationship generally holds for all measures of profitability including rate of return on capital.

Farm net worth increases rapidly as herd size increases (Table 44), but percent equity and debt/asset ratios do not show a significant variation between size groups. Debt payments per cow were lowest for the moderate size herd groups and they demonstrated a strong ability to make debt payments.

Crop yields generally increased as herd size increased, but fertilizer and lime expenses, and machinery cost per tillable acre also increased (Table 45). Milk sold per cow increased as herd size increased, ranging from 15,372 pounds on the farms with less than 40 cows to 19,199 pounds on farms with 300 or more cows. Farm capital per worker generally increased, and farm capital per cow decreased as herd size increased. Milk sold per worker increased dramatically as herd size increased, ranging from 304,000 pounds at the lowest herd size category up to 872,000 pounds at the largest size category.

Comparisons by Type of Barn and Herd Size: When analyzing a dairy farm business by comparing it to a group of farms, it is important that the group of farms used have as many of the same physical characteristics as possible as the farm being analyzed. To assist in this endeavor, dairy farms in the summary have been divided into those with freestall and those with conventional housing. Within each group is a further classification by size of the dairy herd.

Table 46 on page 44 shows the average values for the resulting four groups of dairy farms. Within each housing type, the larger herd size generally has the higher crop yields and pounds of milk sold per cow. The total cost of producing milk was lower on the larger farms and labor efficiency greater. Profitability was also greater on the larger farms within each housing type. Note the similarity of resource use and management performance between the large conventional and small freestall farms.

Farm business charts have been computed for each of the four housing and herd size categories and are on pages 45-48. By comparing the farm's performance on the most appropriate business chart, a farm manager will be better able to evaluate his or her business performance.

Comparison of Farms by Milking Frequency: Selected business and cost of milk production factors from farms milking three times per day (3X) in 1989 and 1990 are compared with farms milking twice per day (2X) in Table 51. The number of farmers milking 3X increased 28 percent from 1989 to 1990. They milked 2.7 times more cows and sold 3.2 times more milk than the 2X dairy farmers in 1990. The operating costs of producing milk on the 3X farms were 4 cents per hundredweight lower in 1989, but 14 cents per hundredweight higher in 1990. Total costs per hundredweight were substantially lower on 3X farms because the costs of using the operator's labor, management, and capital were spread out over much larger production. The higher returns and profits achieved by the 3X

dairy farmers cannot all be attributed to milking frequency. Comparisons of herd size, crop production, cows per worker, capital per cow, and machinery costs per cow indicate there are other important management differences contributing to higher profits.

Comparison by Milking System: The majority of farms had a pipeline milker and high capital per cow (Table 52). Farms with herringbone parlors had the highest farm capital per worker and the highest cows per worker. Farms with other parlors had the lowest costs of production.

Growing vs. Buying Corn: Farms producing corn grain averaged more cows per farm and more milk per cow than farms not producing corn grain (Table 53). Cows per worker were not significantly different, but purchased dairy feed per cow and purchased feed and crop expense per hundredweight of milk were lower on farms producing corn grain. Machinery cost per hundredweight of milk was higher with corn grain production, as was profitability.

Ten Year Comparisons; Average Cost of Producing Milk: Selected business factors and average data on the cost of producing milk from all specialized dairy farms included in each annual summary from 1981 through 1990 are presented in Tables 54 and 55.

The whole farm method of calculating the costs of producing milk described on pages 21 and 22 is used in compiling Table 55. The return per hundredweight to operator labor, capital, and management is the average farm price of milk minus the operating cost of milk production, depreciation, and unpaid family labor.

Comparison of Dairy Farm Business Data by Region: Average farm business summary data from four areas or regions of the State are compared in Tables 56 and 57. The largest average farm size, highest average rate of milk production, and highest average farm profits came from the Western Plain and Central Region.

Receipts and Expenses per Hundredweight of Milk and Per Cow: Average itemized accrual receipts and expenses per cow and per hundredweight of milk sold are listed for all 395 dairy farms, 233 dairy farms selling less than 17,720 pounds of milk per cow, and 162 dairy farms selling 17,720 pounds per cow and more in Table 58 on page 56. Total operating expenses averaged 20 percent higher per cow but 55 cents per hundredweight lower on the more productive farms.

Table 59 on page 57 provides the same list of average accrual receipts and expenses for all 395 dairy farms plus a two group herd size comparison. Farms with 100 cows or more had total operating expenses that averaged 14 percent higher per cow and 30 cents more per hundredweight of milk than the farms with less than 100 cows. Total accrual receipts averaged 18 cents higher but total accrual expenses were only nine cents more per hundredweight on the larger farms.

Comparisons by Business Organization: A comparison by business organization is contained in Table 60. Farms organized as a corporation are two times larger than partnership-operated farms and nearly three times larger than proprietorship-operated farms. Profitability is also greater on corporation organized farms, followed by partnerships and then proprietorships.

Other Comparisons: Dairy-renter farms were smaller than the 395 owner-operated farms, and were less profitable than the average specialized dairy farm (Table 61). A.E. Ext. 91-19 contains detailed information on dairy-renters.

Data for the top 10 percent of farms by net farm income without appreciation is presented in Table 62. Summary data for the 395 specialized dairy farms are presented in Table 63.

Table 43. FARM BUSINESS SUMMARY BY HERD SIZE
395 New York Dairy Farms, 1990

Item — Farm Size:	Less than 40 Cows	40 to 54 Cows	55 to 69 Cows	70 to 84 Cows	85 to 99 Cows

NOTES

APPENDIX

THE ECONOMIC ENVIRONMENT FACING NEW YORK DAIRY FARMERS

The prices dairy farmers receive for milk and slaughter cows have a major impact on dairy farm profits. Milk prices generally increased from 1975 to 1981. Annual milk prices declined from 1981 to 1986, increased slightly in 1987, declined in 1988, and increased significantly in 1989. The 1990 milk price averaged $0.40 per hundredweight higher than in 1989. The average monthly farm price exceeded 1989 levels during the first three quarters of 1990. The December 1990 milk price received of $12.20 is the lowest price received since mid-1988. Slaughter cow prices hit a six-year low in 1975, peaked in 1979, declined through the early 1980's, and increased in 1987-1990. The 1990 slaughter cow price averaged $3.20 per hundredweight higher than in 1989.

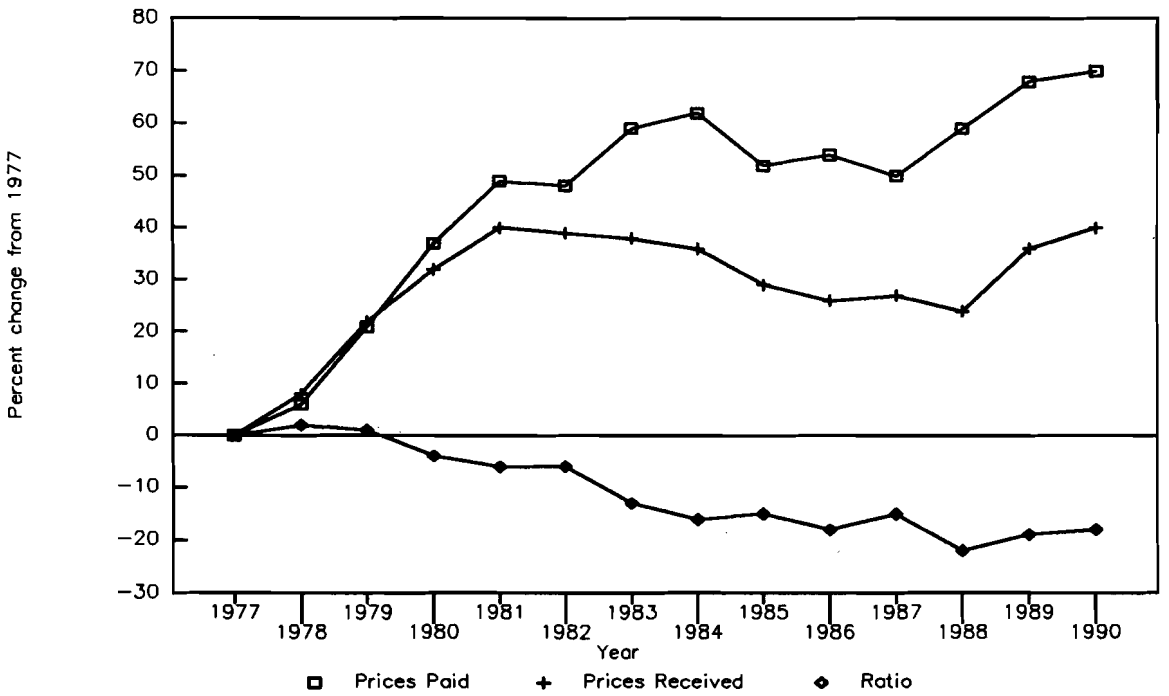
The table above shows average prices of selected goods and services used on New York dairy farms. Chart A2 shows the ratio of prices received for milk and prices paid by New York dairy farmers as a percent change from 1977. The ratio has been on a downward trend since 1978 except for slight increases in 1985, 1987, 1989, and 1990.

Chart A2. Ratio of Prices Received for Milk and Prices Paid by New York Dairy Farmers, 1977-1990



SOURCE: NYCRS, New York Agricultural Statistics.

Inflation, farm profitability, supply and demand all have a direct impact on the inventory values on New York dairy farms. The table below shows year-end (December) prices paid for dairy cows (replacements), an index of these cow prices, an index of new machinery prices (U.S. average), the average per acre value of farmland and buildings reported in February (April for 1982-85), and an index of the real estate prices.
